The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 522. SATURDAY, JANUARY 4, 1908. (Registered as a Newspaper.) Price 6d.
New Series.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and wil be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

ne Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Promise of the New Year.

It is undeniably a great relief to have finished with 1907 and its losses and dreads of loss. The elasticity of stock markets and the weakness in the discount market at the turn of the year are the natural expression of this feeling. People feared so much that the non-realisation of their fears has filled them with hope, and the expression of this hope is competition for bills, the purchase of stocks for the rise. All this is natural enough, and we shall rejoice if those who prophesy cheap money, rising markets, and a good time all round from this time forth, prove to have made a wise forecast. Only we should like to ask them to explain to us in what sense affairs have really changed for the better. The worst of the financial confusion may be at an end in the United States, but is the industrial crisis finished there, or has anything been done in an honest way to readjust finance to industrial facts? Are not bankers' energies absorbed still in the effort to keep up appearances, to disguise from their customers and from the world the ravages made upon their assets by the fall that has already taken place in the securities whose market prices were inflated by their help? What are the banks and trust companies carrying in the shape of book losses or of unmarketable paper? Who will have to stand the racket of the real estate collapse impending both in the United States and in Canada? The financial chaos which has prevailed in the States is no more as yet than a warning; its effects must follow, and it is by them that the test of solvency will be applied. Expedients, "deals," absorptions, reshuffles, may tide over the initial stages of a crisis, but what will happen when industrial earnings do not admit of dividend payments, when railroad receiverships become again the usage, and when the manufacture of securities that by pledging and rigging can be turned into credit, which is market money, is reduced to a minimum? Above all, how will the United States fare when denied supplies of European capital on the old scale? It must be so denied, because Europe will not now have the capital to spare.

No fallacy is greater than that which bids us regard the United States as a country becoming every year more wealthy. It is a country busy exhausting its wealth and dependent upon Europe for supplies of capital in order to maintain the millionaire illusion. The course of the country's foreign trade proves this to be so, and so ignorant are the American people of what constitutes prosperity that they boast continually of the adverse trade balance as if it were in their favour. We are gravely informed, for example, that the "trade balance" was not so favourable for the eleven months to the end of November last year as in the same period of 1906 because exports exceeded imports in value by only £77,082,000 as compared with £84,340,000; but happily November alone began to show improvement, the excess export values of that month having been £18,732,000 as compared with one of no more than £12,590,000 in November, 1906, and of but £14,409,000 in November, 1905. As a matter of fact, this excess represents the drain upon the Republic imposed by its obligations of all kinds due abroad. It

therefore forms a kind of barometer of wealth waste, or exhaustion, and it would have become much more severe and deadly in its consequences ere now were it not always eased and off-set by supplies of European capital and of European energy in the form of immigrants. What, then, will be the condition of United States industries if Europe proves neither able nor willing for some time to come to provide the money necessary to maintain the "prosperity" of syndicated, financed, and propped-up American industries? The parent Westinghouse Electric Company need not have pulled up when it did if French bankers had found the money it asked for; and if we will buy and pay for its excess production—even now very great—the Carnegie Steel Combine may keep in the dividend list for some months or years yet. Left alone with its home customers its embarrassment is certain, and thus do matters industrial stand all round in North America. How then can we maintain that "the worst is now over and recuperation about to set in"?

We must be exceedingly careful still that we ourselves are not drawn into the whirlpool of vanishing impostures, and our most prominent danger at the moment appears to be in the direction of Canada. There the failure of the harvest, the collapse in the land speculation, the misery of the immigrants lured into the cold North-West, the slackening of the demand for labour everywhere, and the complete dependence of the Dominion's industries on British capital promise to bring about an exceedingly critical position at no distant date. It is all right always and everywhere as long as fresh capital pours in to take the place of that lost or exhausted, but stop or diminish the supplies and the cracks and rotten foundations soon appear or betray their presence. Probably enough a consideration of this kind had weight with the directors of the Canadian Pacific company when they decided to call for another £5,000,000 from their stockholders. That money should enable this company at least to outride the storm unless the North-West is blighted by a succession of bad harvests. But it would take three times five millions to pull Canada through its troubles this year, and money to this extent will not be forthcoming. Therefore we had better not be too rash in our estimates of that longed-for prosperity, which is just about to dawn.

We might go on to weigh probabilities in Germany and France, to discuss the effect of excessive taxation and deficits there, to examine the commitments of our colonies, the famine of India, the progress of Japan, the probable consequences of the new nationalism in China, and the effects of the trade reaction now setting in at home, but space forbids. So we shall ask but one or two questions relating to conditions here. And, first of all, is it prudent or reasonable to assume that all our credit handlers, corporate and individual, have come scatheless through the strain of the last 18 months? We have never had "cheap money" since the summer of 1906, and the dearness of the past two months has been greater than that of the last two months of 1906. How has this increased pressure affected the position of bankers, bill brokers, those who live by the margin between what they borrow and what they lend at? What has dear money done to create dangerous locks-up of capital, to diminish the profits of manufacturers and distributors? How many insolvent clients do members of the Stock Exchange and banks carry on their books, hoping against hope? To what extent are our banks committed to Canadian railway building and land-jobbing enterprises? What is the position of the underwriters of unsold issues of new capital? There is no end to the searching questions which could be put, and the drift of them all is to suggest caution, the avoidance of credit commitments wherever possible, lest the dangers now screened off emerge again in more formidable shape than ever. The man who speculates in any direction at present with capital not his own is a man who bids defiance to prudence.

Nine Months' Revenue.

Is the income of the nation beginning to show traces of the prevailing financial distress? Hardly as yet, although the figures for the past quarter are not very encouraging. They show a nett decrease of £1,155,182 on the figures for the corresponding quarter of last year, everything included. Under Mr. Asquith a welcome change has taken place in the method of exhibiting the income and outgo. Formerly the whole product of taxation was not included in what may be called the Imperial portion of the accounts. Moneys assigned to local taxation out of the Imperial taxes were separately exhibited, and people were apt to overlook this important item of the country's burden. Now, however, the entire revenue is set forth, and the amounts paid each quarter to local taxation are exhibited in the summary return of expenditure. We have therefore to deal with the gross revenue of the past quarter, and it is not particularly suggestive of diminution, although only the Post Office service gives an increase of £200,000 for that time, all the other branches showing declines. That the revenue is going to shrink in the current year we have no doubt whatever, but the nation has not yet curtailed its expenditure to the extent recent events should have warned it to do. Trade has not yet begun to show much symptom of diminution, and it may be that the income-tax alone will fail in the last quarter of the year to yield the amount expected by Mr. Asquith last April. He looked for a diminution of £2,000,000 or thereby as product of his attempt at graduation whereby earned incomes were to pay 3d. in the £ less than unearned ones. As yet, however, the income-tax has not diminished in fertility, for the very good reason that the graduation only comes into force this week on the assessments recently made. The tax, accordingly, shows, in spite of the decrease of £190,000 for the past quarter, an increase of £273,000 on the nine months ended last Tuesday, and in none of the other categories except estate duties are the declines formidable. They as yet indicate inelasticity rather than retrogression. The decrease, however, in the estate duties is about £588,000 upon the quarter, and this brings the total decrease in that class of imposts for the nine months up to £846,000; but we cannot be sure that even this indicates an enduring tendency, so much depending upon the number of millionaires who die. There was an unusual array of these last fiscal year, and a falling off was quite in order. It has also to be borne in mind that the decline in the market value of stocks and shares must affect the total of the exhibits made by deceased estates, and to a corresponding degree diminish the revenue drawn therefrom. But it is too early yet to guess what the consequence of this decline in prices may be to the revenue. All the figures before us do is to warn the Treasury not to make a sanguine forecast for the next Budget. If this warning is neglected we may be sure that twelve months hence there will be a much more unpleasant revelation than that made this week.

Is it probable that the Budget Estimates of last April will not be fulfilled? If the third quarter of the year shows a decrease compared with the same quarter of the preceding year amounting to £1,155,000, and if this decrease not only wipes out all the improvements shown in the two previous quarters, but causes a diminution of £272,000 for the nine months, is it not reasonable to expect a decline at the end of the year sufficiently large to put the Chancellor of the Exchequer out of countenance? We should not like to say, but see no reason to be much discouraged by the actual figures. Allowing for the assigned revenues, there is about £50,000,000 to come in during the current quarter, and it ought to be possible to get very near this figure, unless something cataclysmic occurs to upset the nation's financial machinery in the meanwhile. We must not assume that any such catastrophe is at hand, although the elements that go to make it lie all around us, and unless the diminution of the past quarter becomes more general and more

severe in the final quarter of the fiscal year than it has yet done, the deficiency shown by March 31 on the same basis ought not to exceed £1,000,000 to £1,500,000 on the Budget Estimates. This might mean that Mr. Asquith would not have that £1,500,000 extra to devote to the reduction of debt which he reckoned on when allocating his Budget surplus, and as nobody seems to care much whether the debt is reduced or not, such a shortcoming need not give him very much trouble.

For our part, we should be heartily glad were the deficit to become progressive week by week until it reached £3,000,000 or £4,000,000 on March 31 next, because only by some sharp lesson such as this would administer can we hope for any strenuous and consistent attempt on the part of the Government to reduce the excessive expenditure to which it, almost equally with its predecessor, has committed and is committing the country. From our point of view we, therefore, rejoice that the revenue is beginning to decline, because the country is paying much more than it can afford towards the cost of maintaining the Empire, or the fighting appliances of the Empire, on the scale now established. If the revenue declines during the present quarter at an accelerated speed and lands the Government in a moderately embarrassing financial mess next April, it may begin to stir in the direction of genuine retrenchment. As yet, however, we cannot be confident that this all-round set-back is about to be given to the nation's finances, but feel pretty certain that if the Government should escape trouble this year it will not do so next year unless the Budget for 1908-9 is framed upon a much more modest scale than the one now running its course. Already £80,000,000 has been paid in by the taxpayer on account of this year's Budget, and that should have been quite enough to have served for the entire year. This is only another way of saying that the excessive taxation borne by the people of the United Kingdom amounts to between £30,000,000 and £35,000,000 per annum, and as long as this excessive taxation is drained out of the people's pockets it is useless to talk about "great prosperity," "restoration of our industries to their previous condition," "the revival of speculative activity," or anything of that kind. The upas tree of over-taxation is draining away the sources of prosperity over the whole Empire, and unless it is severely pruned so that many millions now sucked up and consumed may be left to fructify in the hands of the people, our crisis will be a permanent one, varied by spasms.

Looking at the indirect taxes for the nine months, it is noticeable that Customs alone show much decline. It amounts to £768,000, and that is chiefly the consequence of the removal of the export duty on coal, a duty that was doing not a little to embarrass our ocean-carrying trade, which is the greatest in the world, and most vital to us. The Excise has not varied appreciably on the nine months' comparison, so that the drinking habits of the nation show no particular sign of diminution, while stamps, the post office and the telegraph services all show more or less important improvements, as might be expected from the absence of any vivid signs of diminution in the business activity of the country. Our foreign trade has no doubt been tending to decline, but up to the end of November, when the last return of the Board of Trade was published, the figures were still sensibly in excess of those of a year ago, and although Stock Exchange business has been growing poorer, the whole business requirements of the country have demanded about as many deed stamps as usual. Only in the past quarter does the category "stamps" show a decrease of £110,000, but for the nine months there is still an increase of £164,000. All we can say, therefore, is that the returns for the current three months will deserve to be scrutinised from week to week with unusual interest. Should the income-tax fail to come up to expectations, should stamps continue to decline, or should the death duties still go on yielding smaller slices of capital to be utilised as revenue by the Treasury, then we may be sure that Mr. Asquith will have the hardest task ever set to him in his life when he comes to draw up his next Budget.

The Union Pacific Railroad Report.

Unusual interest attaches to the report of this monopolist and stock-jobbing railroad corporation for its fiscal year ended June 30 last. Its appearance is somewhat belated, but the interests involved are so numerous and varied that possibly enough it was either difficult or inexpedient to get the figures together earlier. Had the company's year been the same as the calendar year, even the traffic exhibit might not have been so good, but, as it is, nothing could well exceed the splendour of the display, except the ghastliness of the loss on Stock Exchange deals. Gross receipts were $8,759,000 larger than in the previous fiscal year at $76,041,000, while working expenses increased by $5,314,000 to $40,575,000. Adding in $2,070,000 paid away in taxes, the entire outgoings came to $42,645,000 or $5,681,000 more than in the preceding year. The increase in the nett income was accordingly $3,078,000 at $33,396,000, and after meeting interest and rentals there was a surplus of $24,590,000, out of which the preferred dividend was met and 6 per cent. paid upon the ordinary share capital, and after that $8,879,000 or $3,067,000 more was still left to be disposed of. But this is by no means all the story, for the Union Pacific, being a controlling company, is in receipt of large dividends from the "auxiliary" Oregon Short Line and Oregon Railroad and Navigation Companies, besides some amounts classed as interest on bonds held by it in other companies. The total income from this source, after deducting the "balance of interest and loans on open accounts other than the auxiliary companies" above named, was $11,587,000, out of which another 4 per cent. was paid on the common stock of the Union Pacific Company. This additional distribution took $7,819,000 and still left $3,768,000 to be carried to the surplus account, making the total at credit of that account $12,647,000, from which only $1,959,000 was withdrawn to be applied in payment for betterments. So the board could have paid 17 per cent. instead of 10 per cent. The year before betterments and new equipment received altogether $4,200,000, but this year the bulk of the improvements were charged to capital account and a balance of $10,688,000 was carried forward as "surplus" compared with $8,032,000 a year ago. Gross receipts, it may be added, went up 13.02 per cent., working expenses 15.07 per cent. and taxes 21.56 per cent.

Nothing could more vividly illustrate the value of monopoly than the extraordinary traffic development of this company since its reorganisation in 1898. At that date the length of road open was 5,326 miles, and last year the average number of miles worked was only 5,645, so that comparatively little additional business came from the extension of the company's system. This mileage includes a number of other roads, principally of the above-mentioned Oregon lines and their dependencies, and the total length of the Union Pacific Railroad itself is only 3,166 miles, of which barely 284 miles are double track. Indeed, the double line over the combined system is only 288 miles out of 5,911 miles, but the various roads had 1,743 miles of sidings at the date of the report. Progress in building, however, has been comparatively slow, and the Union Pacific has attained to its marvellous revenue-earning power by absorption and combination. In the year ended June 30, 1898, on the mileage above given, the gross earnings were only $33,281,000 and the fixed charges came to $4,488,000 against $8,653,000 for the past year. In the interval, however, these fixed charges have been considerably higher than they are now, and reached in 1904 $12,422,000, since when conversions of bonds into stock have reduced the fixed charges. Dividends paid

in 1898 took little more than $1,781,000, and for the past year they took $23,530,000, still leaving a "surplus," which Stock Exchange losses since have done much more than swallow up.

How is it that the traffic and profits of this company have developed in so wonderful a fashion? It is only ten years since it had to be reorganised in bankruptcy, and its dependents, the auxiliary Oregon Short Line and Oregon Railroad and Navigation Companies, have also passed through bankruptcy on the way to prosperity unrivalled by any group of railroads within the Union. What is the secret of it all? It is monopoly. The Union Pacific is the centre of a system of railroad monopolisation which, if it had not been stopped when the United States Supreme Court ordered the dissolution of the Northern Securities Company, would have put in the hands of a few men—the Standard Oil devourers and their friends—the whole traffic between the Atlantic and Pacific coasts of the United States. As it is, the Union Pacific controls the Southern Pacific through the Oregon Short Line, which is the nominal owner of $90,000,000 of Southern Pacific common stock and large amounts of its preferred. In its turn the Southern Pacific is master of the Central Pacific and the Oregon and California Railroads, so that the whole trade of California is in the hands of this organisation, which can charge whatever rates it pleases and conduct the traffic on a system calculated to yield it the highest percentage of nett profits. And the monopolists are not satisfied merely with owning these railroads; they launch forth in all directions in order to strengthen their position as masters of the fate of the working communities through whose towns and districts their roads go. We shall deal presently with the stock-jobbing aspect of this corporation, but before doing so it may be well to point out that, with all this wealth and cunning organisation, the Union Pacific is not really so very rich. It had a floating debt at the date of its balance-sheet which amounted in all to about $73,000,000, and was obliged to hurry up an issue of $75,000,000 of 20-year 4 per cent. convertible gold bonds in order temporarily to escape danger through the financial crisis that came on in the late autumn. We have already mentioned that the lines are single almost throughout, and the money taken from income and applied to betterments does not appear to be nearly sufficient to put the line in good order. Heavier and heavier equipment is being put upon it—engines of 100 tons weight, cars of nearly 50 tons capacity, &c.—and at the date of the report 77.71 per cent. of the total length of road was laid with rails of between 60 and 80 lbs. weight. To be sure, this was a decrease of rather over 4 per cent. on the proportion shown in the preceding year, but it is none the less true that on June 30 last only 503 miles out of a total length of 5,958 miles was laid with rails of 90 lbs. weight, the heaviest the company uses. Is it to be wondered at that the loss of life through accidents upon a railroad thus equipped has of recent years been both frequent and horrible? And the road is evidently in bad condition otherwise—at any rate portions of it—for re-grading is going on as well as re-alignment, and flimsy wooden bridges and viaducts continue to be replaced by steel bridges, which, for all we can tell to the contrary, may be equally fragile and treacherous through the low grade of steel used and slightness of construction. All this, however, does not diminish the display made by the traffic figures and dividend earnings from investments, and yet the company spent last year $21,073,000 nett on capital account. Of this, however, only $10,764,000 went towards the construction of a number of small railways, all seemingly owned by separate companies controlled by the Union Pacific, and all contributing through this capital expenditure to its gross earnings. That is the great use of small companies. Were the big railroads themselves to build these extensions, they could not manipulate their traffic figures so as to utilise part of the capital spent upon the building to increase their receipts. As it is, each twopenny-halfpenny company has its separate capital account, and all the materials carried for it are duly charged freight rates over the lines of the master company, which charges are paid for out of the bond or other capital issues made. On its own extensions, for example, or on the extensions of the two auxiliaries, the Oregon Short Line and the Oregon Railroad and Navigation lines, only $705,000 was spent out of capital in the past year, exclusive of the outlay on betterments paid for partly by the above-mentioned transfer from surplus revenue, partly by $1,260,000 received from the trustees of the Union Pacific Railroad Company's first mortgage 4 per cent. bonds, which, we believe, represent the revenue from the land grant enjoyed by the company, and continuously productive of a considerable income that ought to have belonged to the community.

It is, however, as a stock gambler on a gigantic scale that the Union Pacific board will attract most attention at the present time. Consider the magnificent position the gentlemen composing this board are in. They can deal so largely as to be able to control the market. It is in their power to manipulate traffic receipts and expenses in such a way as to show splendidly progressive revenues, capable of yielding augmenting dividends to the stockholders, and they can make dependent companies play the game in unison. Also they have enjoyed the inestimable advantage of being able to draw on Europe for whatever capital they required. Time was when the Union Pacific Railway and all its dependent and linked and leased concerns were either unknown or thoroughly discredited on European markets. Ten years ago the common stock of the Union Pacific company, which then amounted to only $61,000,000 was quoted in London at from 23 to 25. Lately it has been above 200, and European speculators, British as well as Continental, have been eager buyers of this stock at the highest figures. They seem to believe in it still, and continue to buy on every fall, forgetful altogether of the fact that the total amount of it now outstanding is $198,478,000, with another $100,000,000 lying in reserve to be exchanged in 1917 for the short-term bonds falling due. Ten years ago the London Stock Exchange only quoted the Land Grant bonds of the company, whose total at June 30, 1898, was $84,235,000, but it now quotes in addition to the whole of the common stock $168,000,000 of bonds, and the fact that it does so reveals the source whence most of the prosperity of the Union Pacific system has arisen. Without the European money drawn in to assist in its operations and in those of the Southern Pacific Company, there would have been no such progress as we have seen, and, above all, there could have been no gigantic stock operations such as this report in some degree reveals, the losses upon which seem likely again to throw the company into the hands of receivers. It is the boast of the directors that they made a magnificent profit by some of their deals. They claim, indeed, to have made "a pot of money" by their sale of the stock of the Northern Securities Company and of the Great Northern Railway Company. Their purchases of these stocks cost the Union Pacific $83,204,000, and they sold a considerable portion of their holdings for $117,870,000, still holding 90,364 Great Northern shares, 77,164 shares in the form of Great Northern Railway ore certificates, 41,528 Northern Pacific Railway shares and 7,249 Northern Securities shares at the date of this balance-sheet, so that there may be a further profit to come in when these can be sold. This may be doubtful, for the splendid prices they sold at contrast in a most significant fashion with those now ruling. Leaving out the Northern Securities shares, which are a security we know nothing about, the average price obtained for the shares of the Great Northern Railway sold by the board of the Union Pacific was over $304, and to-day the price of these shares is, say, $115. For their Northern Pacific shares they got an average of nearly $209, and they have been down recently at par, rising, however, to $115 or $116. What the trusts, bankers and other victims who bought the shares thus unloaded by the

Union Pacific directors now think of the financial astuteness of these gentlemen cannot be known, but it must be true that a good deal of the financial trouble which overtook New York in October last arose through transactions such as this. The board of the Union Pacific Company, however, is not satisfied with a deal of this description; it goes on dealing, and in doing so brings the company down among the general ruck of losers. We should like to know what commissions are paid, and whether the prices at which the company is made owner of stock are the same as those at which they were acquired by the members of the board who transferred them. This also is a point on which no light can be thrown; but the business goes on, and the money realised by the sales above mentioned has been "re-invested" with such zeal that the depreciation exhibited and borne by the company up to June 30 last was $23,150,000. This, the report points out, is $32,378,000 less than the loss would have been if the original securities had been retained; but what is the loss to-day? and by what right, moral or other, do the men controlling this railroad combination thus play with money obtained abroad? If Europe trusts these men with more of its spare cash it will deserve to lose all. For what have the gamblers bought? They bought preferred stock of the Atchison Company, common stock of the Milwaukee Company and of the Chicago and North-Western as well as of the Baltimore and Ohio Railroad, and, above all, of the Illinois Central and New York Central Railroads. Many of these deals can only have been entered upon with the view to job, to get out at a profit, and altogether $131,693,000 appears to have been sunk in this way, or an amount considerably in excess of the sum realised by the sales. The company therefore now holds 323,342 shares of the Baltimore and Ohio Railroad bought for $38,810,000, besides 72,064 preferred shares of the same company costing $6,666,000, this transaction having opportunely put the Pennsylvania Railroad, the previous owner of these shares, or most of them, in much-needed funds. The interest taken in the Illinois Central has amounted to 186,231 shares, costing $32,619,000, and 142,857 shares in the New York Central Railroad have been bought for $19,634,000. Next comes 100,000 preferred stock in the Atchison company costing $10,395,000, the acquisitions in the Milwaukee and Chicago and North-Western Company being respectively 36,900 and 32,150 shares, costing in all nearly $12,000,000. No wonder that a proposition has been made to convert this wholesale stock gambling department of the Union Pacific into a separate company, a "holding" company which would be at liberty to play with the market, and at the same time escape the odium thrown upon the railroad board by its operations. These are only the larger investments, for the Union Pacific, as we have said, has complete mastery of about 32 small lines, the largest of which is little more than 225 miles long, and some of which own only a few miles; but they doubtless all bring grist to the mill. In addition the board has just organised a Pacific Fruit Express Company, with an authorised capital of $12,000,000, in order to secure for the system the monopoly of the fruit-carrying business of California, and as, in spite of its profits and great revenues, it seems to be sometimes rather short of cash, a Union Pacific Equipment Association has been brought into existence, both of these instruments being incorporated under the laws of the State of Utah. The Equipment Company is designed to supply the Union Pacific and auxiliary companies with cars and locomotives, and is executing an order for $4,731,000 of these perishable articles. What is the loss to-day upon the share investments, and how far further is the board engaging the resources of the Union Pacific in the endeavour to hold the market up? Upon the answer to these questions may depend the date when the concern will again pass into the hands of a receiver.

Shawinigan Water and Power Company.—Earnings for November were $54,500, being at the rate of $654,000 per annum, compared with $30,412, or at the rate of $364,944 per annum a year ago.

Economic and Financial Notes.

The Debt of Cape Colony.

A correspondent of the *Daily Chronicle* opportunely reminds us at the end of the year that the debt of this British dependency has now risen to £53,194,354 or thereby. It was about £49,200,000 at the end of December, 1906, and during the past year almost £4,000,000 more was added, bringing it up to the figure just given. Going back to 1888, we find the debt less than £21,000,000 at that date, and by 1897 it had increased to little more than £27,282,000. Between the end of 1897 and the end of the past year the increase has been nearly £26,000,000. In other words, while the earlier period showed an increase of little more than 23 per cent. in the debt, the latter gives an increase of about 95 per cent., and it would be interesting to know what the people of the colony have got for this enormous addition to their obligations, all of which are probably held in this country. Are they any richer for all this money spent? Accounts from the colony indicate that they are poorer, and they must be poorer since neither their population nor their trade has developed in the interval to an extent in any degree commensurate with this increase in the debt. The truth is Cape Colony, like the other settlements in South Africa, has been blighted in its growth by the discovery of gold and diamonds. These precious minerals have stimulated all South African Governments to a course of wantonness in spending that they would never have indulged in had their prosperity rested on the old basis of pasture and agriculture. Therefore the future is anything but reassuring, not only for Cape Colony, but for all the other British colonies in that part of the world. In a comparatively short period of time the gold will be worked out, and already the revenue from diamonds is threatening to be materially curtailed. But even were it otherwise, were the yield of the gold mines to continue increasing, or on the present scale, for another 50 years, and were prosperity to return to De Beers and last for the like period of time, Cape Colony would not be able to carry its debt without continuous assistance, the more mischievous the longer it is given. Only indirectly does its population get any benefit either from gold or diamonds. The development of the soil does not make progress, nor can much increase be reckoned upon in the flocks and herds; therefore the next few years, not to say the next few months, may well bring the authorities of Cape Colony into a position where a composition with its creditors will seem the only way open to escape from a complete breakdown. It will not be possible for the colony to go on borrowing, and it ought not to be allowed to borrow on the extravagant scale which has been adopted during the last six or seven years. It is being ruined by its debts, like many another dependency of the British Crown. The last loan issued will go to hide the deficiency in the revenue, just like much of those that have preceded it.

The Trade and Finances of Ecuador.

Mr. Consul Cartwright's report on Ecuador shows a sad example of the effect of the policy of "Mañana" on an otherwise promising country. To this policy the want of capable finance no doubt largely contributes. The burden of the report is that nothing further has been done, no advance has been made with otherwise well-conceived schemes. As far as trade and commerce are concerned, the report actually opens with the admission that the year 1906 has been a successful one. The produce of cocoa, rubber, and hats has shown a fair advance in quantity and price, while imports have also gone up. Among the latter, which have risen from £1,573,000 to £1,701,000, jewellery, wines, paper, boats, and crockery show considerable increases, but sundries account for the whole increment and more, being valued at £243,700 against £24,000 in 1905, an advance of such magnitude that it would be interesting to have a little wider classification of this item. Ironware, lumber, machinery, paint, cloth-

ing, and leather goods show a smaller demand, while neither coals nor railway materials, &c., are specified. Of importers, the United Kingdom, Australia, &c., hold first place, if bullion be included, but, excluding this item of nearly £200,000, the United States, with £466,000, leads by £150,000, while Germany sends goods to the value of £300,000. Of exports, the declared Custom House total of £2,196,000 is nearly £500,000 below Mr. Consul Cartwright's table of actual f.o.b. values. For this discrepancy the desire to avoid the duty leviable on the export of cocoa may be in some way responsible, as this item shows a variation of nearly £300,000. Tagua or ivory nuts, rubber, and straw hats are the chief items, besides cocoa, which is responsible for more than half the entire export trade. Of this, the United Kingdom and Australia take only £130,000, France and the United States tying for first place at about £680,000, Germany and "other countries" dividing £700,000 equally between them. The produce of sugar showed a fair increase, but the Ecuadorian seems to have developed a sweet tooth, and not only consumed all the home produce, but also imported about 1,200 tons from Peru. At the end of 1906 the import duty on sugar was removed, with the consequence that the price fell some 30 per cent., and it now seems doubtful if the native article can be grown profitably.

The total income of the Custom House in 1906 amounted to £827,000, of which imports provided £565,000, and exports £262,000. Shipping at Guayaquil, by far the most important port, shows a small decrease on 1905 of 7 in number and 8,500 in tonnage. Of this, 100 out of 195 ships and 158,000 tons out of 350,000 are British, Chili and Germany dividing the balance. The Government have not bothered to publish any financial statistics since the last report, but the estimates of municipal expenditure and revenue balance at £123,700. It is in public works and railways that the climatic characteristics of the country are most freely displayed. Of the Guayaquil and Quito Railway it is unnecessary to make comment, except that the issue of £100,000 Custom House bonds to finance the June coupon constitutes the only alteration of importance in the local indebtedness of the Government. None of the other railways projected, as mentioned in the last report, has been advanced in any way. Of the Quito waterworks it is reported that the municipality has not performed its part of the contract, and is not in a financial condition to do so. Electric light and brewery schemes in Quito, waterworks in Riobama, colonisation schemes, mining and saline works all languish for various reasons. The election of the President in October, 1906, for a period of five years gave rise to several alarms of political movements, but, apparently, they were procrastinated till they were forgotten. There have been no notable failures, and banking seems to do well. The bank rate is quite European at 7 per cent., but it has had to come down from 12 per cent. to be up to date. The Bank of Ecuador paid 15 per cent., and passed £8,000 to reserve. It has a note circulation of £410,000, a gold reserve of £218,000, and the Government owes it £295,000—quite suggestive of Threadneedle Street. The Banco Comercial y Agricola has similar figures on a slightly lower scale, even to the condescension of the Government. The population of Guayaquil may be estimated at between 80,000 and 90,000, and the death rate at between 35 and 40 per 1,000, approximately in the proportion of one woman to two men and three children. There is a large absentee population in Europe, which, when coupled with the omission of Mr. Consul Cartwright to indicate any openings for British capital or enterprise, would suggest that Ecuador is a good place to live out of.

The Bullion Market in 1907.

The following extracts from Messrs. Samuel Montagu's annual circular will be found interesting and instructive reading :—

SILVER.

The year 1907 opened with fair prospects for silver. The price which was fixed at 32⅜d. on January 1, kept within about one penny below that figure until the middle of March, and then fell away to 29⅞d. on May 8; from that date the quotation rose and kept round about 31d. until July, when it began to mount toward 32d. On August 14 it touched 32¼d. for cash, and 32⅜d. for forward—the highest prices since the beginning of the year. Throughout that month and the next prices moved downward to 31⅛d., until at the close of September, ominous reports came to hand of rain deficiency in parts of India, and a just-completed Government order was not renewed. So unexpected was this unfavourable state of affairs that the bazaars had bought unusually heavy shipments for the end of October settlement in Bombay, and were therefore ill-prepared to meet a reduced demand from up country. Dealers promptly cleared out their stocks, and both India and China daily placed forward silver for sale on the London market, already hampered by large spot accumulations. This happened at a time when money was beginning to get tight, and when metals generally were much depressed, and there was consequently but little speculative activity to stem the fall. The margin of risk was so narrow that it was reported that "two days' rain" would have retrieved the situation in India. A most striking fact! A short downpour would have prevented distress and famine to millions of human beings, financial loss to the vast capital concerned in mining industry throughout the world, and the disturbance of values between China and countries using a gold standard. For nine months of the year forward has been quoted above cash silver, in noticeable contrast to 1906, when cash was almost always the higher, and in consequence, large stocks of cash silver remained in London; for the high premium on forward silver, which at one time reached ½d., tempted banks to carry the prompt and sell forward, inasmuch as the premium generally exceeded the current rate of interest. The American financial crisis had little direct influence on silver, for there existed no latent supplies in the States which could be turned into cash on an emergency; and, moreover, the United States Government has continued to buy small amounts at intervals, and has thus somewhat curtailed the shipments to Europe; but the disquietude, together with the dearness of money, naturally did not encourage demand for the metal. From the end of September, when the lack of rain was becoming serious to India, a period of unsettlement lasted until the end of the year. There was not much uncertainty as to the direction in which prices were moving; the doubtful element was the pace. Frequently the only buying orders for the day represented the covering of "bear" sales as they fell due. A modest revival of business with the bazaars took place for silver to be shipped by the steamer of December 6, due to arrive in Bombay during the December settlement. Possibly, as the next Hindu year is deemed unpropitious for marriage, would-be Benedicts took advantage of the months to spare, and the stock of silver in Bombay, already depleted by sales to China, required replenishment in order to meet the demand for jewellery, customary on such festive occasions. The Washington Treasury purchased £300,000 during the month of December, and thus substantially reduced American sales on the London market, already overburdened with supplies. The quotation fell on December 18 to 24⅜d.—the lowest quotation since June 15, 1903—but recovered a little towards the close of the month. At the lower prices now ruling the outlook seems perhaps a shade more encouraging. The quotation for Mexican dollars during the year seldom has exceeded their melting value. When the price of silver stood high enough for Mexico to export at a profit, a substantial quantity were put on the market, and of these a large proportion were shipped to India for recoinage into rupees, and the remainder were refined or shipped to the Far East.

GOLD.

Not only has India been the most important factor in the silver market, but it has also figured largely as a purchaser of gold, more especially in the earlier part of the year. Probably the natives, conservative though they are, like most Eastern races, now find from experience that the identity between a rupee and its silver contents no longer exists, and that the yellow metal is a reliable security which can always be turned into rupees without appreciable loss. For the first three months the Bank of England absorbed the bulk of arrivals, occasionally paying slightly above the minimum of 77s. 9d. in order to fend off the United States of America. From May to mid-June, France became a serious competitor, and continued to be in the market, off and on, until October, when the demand became more pressing. The low French exchange eventually resulted in withdrawals of French coin from the Bank of England, in addition to the absorption of large supplies in the open market. Germany intervened for a short period in August, and diverted a substantial proportion of the arrivals. At the close of the same month the American financial crisis, the most acute in recent times, began to make its presence felt on this side of the Atlantic, and in spite of a rising Bank rate—ultimately reaching 7 per cent.—and an adverse American exchange, a continuous drain was maintained on the gold resources of this country, owing to the premium on gold existing in the United States. The quotation rose to 78s. 0⅛d. on November 4, but not higher, although the price touched 78s. 0⅝d. in the preceding year. The peculiar circumstances of the crisis, due not to a dearth of gold in the States so much as to the hoarding of currency, rendered it advisable for Europe to allow the flow of gold thither, as far as was consistent with safety, and thus contribute to restore the confidence that had been so rudely shaken. Confidence, however, notwithstanding the heaviness of the shipments—as much as £2,500,000 being on one vessel alone—did not even partially return until the Government of the United

States came to the rescue with an issue of bonds. Even then the relief was slow to reach the country districts, and gold has continued to be shipped until the end of the year. The Bank of England was strengthened to meet this heavy call upon her stock of gold by the readiness of the Bank of France to arrange, through arbitrage houses, the transference of American gold from her coffers. This gold, however, is due for repayment to the Bank of France in the early part of next year, but if necessary doubtless arrangements can be made to postpone this payment for a further short period. Heavy shipments of German gold coin were made from Germany, and a considerable influx of sovereigns and gold coin set in from Scandinavia and other parts of Europe.

American Business Notes.

Progressive improvement is shown in the return of the New York Associated Banks for the past week. The reserve is still £4,034,000 short of the statutory minimum, but the deficiency has been reduced by £2,316,200 during the week, and in other respects the recovery has been more marked than in any previous week since the crisis began. Loans have been cut down by over £3,550,000, owing, it is said, in part to the transfer of these commitments to trust companies. Deposits are also less by £1,714,000 and specie has increased by £1,274,200, while the stock of greenbacks held is larger by £614,000, hence the diminution in the reserve deficiency, which, however, still looks large when compared with a surplus of £1,074,000 a year ago. It is sufficient indeed to prevent most of the banks from resuming payments in the ordinary way, and the detailed return formerly made by these banks is still withheld, from which it may be inferred that the majority of them remain so weak as to be afraid to let their figures appear. For all that improvement goes on, and by and by the ordinary course of business may be resumed if the people show faith and if the demands of Western and Canadian banks for the return of the balance of their moneys lodged in New York are restrained.

There would appear to be progress in other parts of the country as well, and doubtless the absorption of so much gold by the interior banks has helped sensibly to lessen the strain. Chicago banks, for instance, are gradually withdrawing their Clearing-House certificates. The maximum amount of these issued at any one time is stated to have been only £2,900,000, and by the third week of last month this aggregate was reduced to £2,400,000. Unfortunately, small banks continue to stop payment all over the country, and many of them, we fear, will never be able to resume business. Confidence in the National Bank note has, therefore, been destroyed, probably for ever, and Congress will have to set its wits to work to discover some form of paper money the people will trust in. Failing that, we do not see how any permanent improvement in the credit position is to be established.

At any rate, failures succeed each other with suggestive rapidity. The year wound up with the stoppage of the Passaic Steel Company, whose capital is £1,200,000. Thus on New Year's Day came the news that the Chicago and Milwaukee Electric Railroad had been put into the hands of receivers, the amount involved being about £6,000,000. We fear a good many people here are interested in this suspension, as the bonds of the company have been a pet recommendation with a firm of outside brokers for some time past. Unless as holders of Yankee life insurance policies, we do not know that the British public is very much concerned in the third stoppage of the week, the Seaboard Air Line patchwork. What the amount involved in this suspension is cannot be accurately stated, as the railroads are in the hands of a "holding" Seaboard company, whose nominal capital is considerably in excess of any actual debts or shares outstanding. It appears, however, that there are about £6,000,000 of extended Seaboard bonds outstanding besides £1,800,000 of equipment trust issues of various denominations, most of which are overdue, and some £6,800,000 of collateral first mortgage trust bonds besides stocks upon which no dividend has ever been paid. Ryan, the most recent insurance potentate, is deeply interested in the concern, and there are other magnates or their instruments of finance involved. Adverse state legislation is blamed for the failure. The lines are about 2,800 miles long, and run into a number of Southern States.

When money was dear just at the year's end, Wall Street consoled itself by predicting that it was all owing to the end of the year piling-up to be ready for the January disbursements, variously reckoned at from £35,000,000 to £40,000,000. The New Year came, the disbursements, whatever their amount, were made, and on the second day of January call money rose to 20 per cent., or as high as it had been at the end of December. It fell, however, to 5 per cent. before the day closed, but that means little, and dear money must rule, by fits and epileptic fits, at any rate, until the superstructure of flimsy, wormeaten and wind-distended credit has come to the ground. And the premium on currency which we are assured every other day has "practically disappeared" emerges again, and promises to flicker for some time, even though the Washington Government should get power to issue £20,000,000 more 7 per cent. "shin plasters," as it is said to have in view. If £1,000,000,000 in credit is required to carry inflated stocks, whose true value may not be more than £300,000,000, it is obvious that the "money" tied up in this kind of business can never be "cheap."

The copper position is growing worse instead of better, notwithstanding the endeavours of interested operators to push prices up. Some index to the drift of things is afforded by the decline in the Anaconda Copper Company's dividend. Six months ago it made a quarterly distribution of $1 75 cents per share, and three months ago the payment was $1 25 cents. This is now reduced to 50 cents, and probably enough no dividend at all ought to have been paid, regard had to the copper position. What that position is Messrs. Vivien, Younger, and Bond admirably indicate in their latest circular. "Unsold stocks in Europe," they say, "are larger to-day than for a long time past, and they are considerable in America as also probably in Japan. Production, though diminished, is still fully equal to, probably larger than, consumption." Prospects are, furthermore, very poor indeed for trade during 1908, particularly in America, where the prolonged financial crisis has produced chaos, and "the worst of the industrial setback has not yet come." These remarks apply with equal force to the iron and steel trades, to manufacturing industries of every description. Production has nowhere been brought down to the level of actual or even probable consuming demands. There is a natural reluctance to accept the situation, and to return to what may be called a cash basis in trading. Because this is so the absence of visible trouble does not indicate that the crisis is over. In most manufactures and with distributing agencies the trouble has yet to come. American railroads, for instance, are still showing traffic figures that give comparatively little indication of the stagnation of business. They must be artificially maintained, and the increase in the gross figures is offset by augmented expenses, which cannot be genuine increases at such a time. We do not put any faith whatever in the exhibits made, because the obvious intention is to create a buying appetite amongst investors and speculators in America and in Europe. Happily, money is scarce everywhere, and will continue scarce, so that this falsetto buoyancy will defeat its purpose.

Amid the general banking hold-up, it is pleasant to learn that here and there in the West banks have been able to meet the difficulties created by the collapse in New York without suspending payment in any form. A Kansas correspondent of the New York *Evening Post* pointed out recently that some banks in that neighbourhood never put any limit upon the cash payments made by them. In Lawrence, a town of 12,000 inhabitants, 30 miles west of Kansas City, bankers selected a committee on currency and stood by each other, with the result that they met all demands, never lost deposits and gained in cash. Another small place called Winfield, on the southern edge of Kansas State,

had banks that were able to follow the same course, and their deposits have remained intact. The same reporter goes on to say that the bank commissioners of the middle Western States in general declare that the banks are in a condition to reopen with full payment of cheques, but this course has not yet been followed, for reasons that we do not quite grasp. Retail trade, however, seems to have gone on in these regions much the same as usual, and people must live, so that there is a minimum line, as it were, below which business cannot shrink.

The director of the United States Mint estimates the production of gold within the Republic during the calendar year at £17,683,000. This compares with £18,875,000, the production in 1906, so that there is a decrease of £1,192,000, which is not much one way or another. Also the production of silver fell off, and amounted to only £7,512,000 against £7,651,300 the year before.

Last year's failures in the United States are returned by Dunn's Mercantile Agency-at 1,017 in number and £15,256,000 in liabilities more than in the previous year. This is no great shakes in the way of increase, for the total liabilities of the 11,699 failures recorded is put at barely £40,000,000. In all probability, however, the current year will be much more prolific in disasters of this kind than the one just closed.

Last year the total of the issues of new capital in the United States was, according to the New York *Journal of Commerce*, about £280,000,000, but the total authorised was £420,510,000, or an increase of £93,108,000 compared with 1906. Of this aggregate, however, only £280,000,000 was actually issued, and of that amount the railroad companies required £191,410,000. Industrial companies came for about £87,400,000. Whether they got all the money is not stated, but the issues were doubtless underwritten, and what the public did not take is lodged with banks, trust companies and financial combinations. It is interesting to note that, of the Railroad issues, £53,520,000 was in short-term notes, and of the balance £88,116,000 was in bonds and £49,773,000 in stocks or shares. Industrial undertakings also put out nearly £14,000,000 in notes, as against £36,712,000 in bonds and £37,020,000 in stock. It is further stated by the same authority that the total amount of new securities issued in the United States during the last five years has been £1,000,000,000. How much of that was disposed of in Europe?

The euphemisms of American financiers are a never-failing delight; they are often so infantile and always so transparently cunning. Look how neatly Mr. Harriman wraps up the loss at June 30 last on the "re-investments" of the Standard Oil bosses' Union Pacific Railroad Company. We have put the crude fact in the leader on another page. Not so Mr. Harriman. He first points out that if the company had held their original investments in the Hill roads the depreciation thereon at the date of the balance-sheet would have been $55,528,000 compared with the prices at which they were "sold." Inasmuch as the depreciation in the new papers bought to replace those sold was only $23,150,000, it therefore follows that this was an "increase in value by re-investments" of no less than $33,378,000 in the whole deal. And no doubt the good man will be pleased to capitalise this "increase." By the same method of calculation, the further loss at the end of the year might probably still show a "profit," and the arithmetic is no doubt "good enough for our lot," as the late Lord Randolph Churchill said—good enough for those who buy Harriman and other wares when insiders are sellers.

Why is it that the London newspapers have almost ignored the "rent war" which has broken out in New York? It seems to be an ominous affair, indicative of widespread social revolt. A New York correspondent of the *Manchester Guardian*, telegraphing on the 30th ult., said that within the square mile between Brooklyn Bridge and the New Williamsburg Bridge the whole population was in a state of seething excitement. That region contains flats and tenement houses, whose inhabitants have been preparing for the fight which began on New Year's Day. A movement against landlords has apparently been spreading for some time back, and the strikers against high rents numbered over 100,000 at the date of the telegram. Their hostility is at present directed against the police as much as against the landlords, and the police are accused of having behaved with great brutality, clubbing the malcontents, and so on. One big flat in Mulberry Street has already had its water cut off, and it seems probable that the mischief will spread, for discontent of this kind is a natural product of the real estate boom which has been more insane and, if possible, more unscrupulous than the manipulation of Stock Exchange counters. Rents, too, are deadly, amounting in these poor quarters to from one-third to one-half the entire earnings of the tenants. A fierce riot occurred on New Year's Day.

As intimated some time ago, the directors of the Canadian Pacific Company propose to make a large new issue of its common stock. The shareholders were called together on Monday last in Montreal to sanction this issue, which amounts to $28,320,000, being the balance of the already authorised maximum. At present, however, only $24,336,000, or rather less than £5,000,000, will be offered to the shareholders on the books of the company on the 13th inst. The stock will be handed to them at par in the usual method followed by this company—a method, as we have often pointed out, that disregards every permanent interest, whether of Canada or of the company, and looks only to market effect and the facile dollar. Naturally enough, therefore, the announcement of this issue sent up the price of the company's shares on the Stock Exchange. Tactically, this may have been one of the principal immediate objects aimed at. On New York, which is the central market for these shares, the price at once jumped $3, and on our market here the stimulus was equally marked, although the rise on the day was less than $1. Still, Tuesday's price touched 160, and if it can be maintained near that the bonus to allottees at par will not only be something substantial in their pockets, but a very severe fine upon the unfortunate and maligned bear. What the ultimate consequences of this kind of finance must be to the Canadian Pacific Company we need not now discuss, but it is bad finance, and will some day or other produce mischief enough. Stockholders will get allotments amounting to 20 per cent. of their holdings, so that, on the basis of a premium of 50 per cent. only, this would work out at $10 per share, money of which the company is deprived. And if all tales be half true, it needs as much money as it can get to make good wear and tear and dilapidations.

Passing Events.

On Wednesday last the amalgamation of the Pelican and British Empire Life Office with the Phœnix Assurance Company became absolute. This means that the Phœnix Assurance Company as now constituted with enlarged powers will vigorously conduct a fire, life, and accident business, and the new departure has been signalised by the issue of a scheme of death duty policies, which will surely meet with success. Nothing is more embarrassing to inheritors of estates than the demand made that the death duties must be paid before probate is granted. In many cases this involves great delay and considerable hardship, so much so that many life offices have added death duty policies to the other lines of business done by them. But if trouble has arisen in the past through this source it will be greater still in the future, especially upon large estates the duties on which have now been subjected to graduation, so that while 10 per cent. is payable on the first million, 12 per cent. and upwards will become payable on all the amount falling in above £2,000,000. Thus an estate of £1,500,000 to £2,000,000 would require from £160,000 to £220,000 to meet the death duty. And there are very few even of the richest estates that have such an amount of loose change lying about. Hence

the value of these death duty policies which the Phœnix Company has arranged on the basis of a whole life with or without profits policy and moderate scales of premium. Under these policies it will pay death duty at once and before probate is granted, and will hand any balance over and above what is required for this payment to the estate. Although whole-life policies, the premiums may be paid up in a limited number of years, and the policies may range from £100 up to any amount. A strong company is alone able to do a large business upon the scale outlined in the circular of the company, but people of modest wealth will find policies of the kind just as useful—or their heirs will—as those of great possessions.

Commonwealth statisticians are well to the fore with figures relating to their material wealth, and their returns for the years 1901 to 1907 were said to show steady development in agriculture. The area under crops has increased from 8,414,000 acres to 9,546,000, and is yearly increasing. Half the area is devoted to wheat. Wine-growing is also making progress, and the total output for the Commonwealth is given as 6,000,000 gallons, which is a very good beginning. Then at the end of 1906, the Commonwealth possessed 1,765,000 horses, 9,350,000 beeves, and 83,687,000 sheep, besides 814,000 pigs. The exports of wool for that year amounted to 415,000,000 lbs. greasy and 65,000,000 lbs. scoured, the greasy being valued at £17,500,000 and the scoured at £5,100,000. Exports of tallow were also valued at £819,000, of sheep-skins at £1,614,000, and of frozen meat at £1,095,000. The butter production is put at 160,000,000 lbs., of which 76,000,000 lbs. were exported, and minerals to the value of £26,500,000 were raised, of which £14,000,000 was represented by gold. The total value of the products of the primary industries was put at £65,500,000. Whether this total is sufficient for the wants of the colonists and their creditors is another matter upon which we will not now enter.

It is officially announced that an agreement has been arranged between the North British and Caledonian Railways which will cover all classes of competitive traffic in Scotland, and if no sinister consequences follow to the travelling and trading public, this announcement will be welcome. It should indeed be beneficial both to stockholders and to the community if the promise given in the official announcement is adhered to. The interests of the public, it is stated, will be protected by the maintenance of an efficient service on both systems, while at the same time the companies will, as a result of the agreement, be enabled to effect material economies in working. Both these aims are perfectly practicable, and this compact, together with that between the Great Central and the Great Northern companies in England, may perhaps be accepted as the beginning of a radical change in the business methods of our railways. Higher working expenses and the comparative inelasticity of earnings are driving all the railways to study economy with an earnestness and thoroughness never before exhibited. This should be good for all concerned.

At the same time there are some movements going on which may tend to prejudice the public against these otherwise wholesome changes. Some English companies, at any rate, are increasing their fares, and it appears that the Scotch and English companies together have decided to make a substantial advance in the week-end fares between Scotch and English stations. A Glasgow correspondent of the *Manchester Guardian* told it early this week that the week-end tickets from that city to Manchester will be raised from 18s. 9d. to 22s. 3d., and between Glasgow and London from 34s. to 41s. 3d. The new fares cannot be described as unreasonable when placed alongside the regular daily fares charged for all tickets between the two kingdoms, but along with this local fares are apparently to be increased, for the same newspaper informs us that short-distance passenger fares on the Midland Railway have been increased by a halfpenny, and there has been an agitation going on amongst railway officials for a long time past to alter the scale of charges wherever possible. It is too early to form any judgment as to the wisdom of the changes, actual or contemplated, but it does seem a pity that something like uniformity of charge could not have been introduced along with the consolidation of interests and the reduction of competition. We should be inclined to think that a low uniform scale of fares and the abolition of the excessively cheap week-end rates would have been more to the purpose than isolated changes of the kind indicated.

Mr. John White's annual shipping review is always interesting, and it is more than usually so for the past year, because it indicates a pause which may become serious in the shipbuilding industry. The output of new merchant steamers from British yards was about 1,600,000 tons in the past year, which is 200,000 tons below the previous year, the highest hitherto seen. Much of this tonnage seems to have been built for foreign purchasers, such as the Hamburg-American line, the Holland-America, the two Italian companies, and the French Chargeurs Réunis Company. Tonnage to the amount of 1,068,422 tons was under construction on September 30 last, which is also 200,000 tons below the figures of the year before. Between 1897 and 1906, 5,488,938 tons of steam vessels formed the nett addition to the British register, against which 1,230,641 tons of sailing ships were struck off. The much higher efficiency of the steamers enabled the country to cope with its greatly increased trade and to handle its commerce with far-distant countries. Thus between the two dates given the export of coal rose from 34,000,000 tons to 55,500,000 tons, and our ships, assisted by this outward freight, went to the River Plate, Australia, and the West Coast of America for grain in increasing numbers, instead of as formerly to the Atlantic side of North America, Russia, and other European countries. All this record is extremely interesting and encouraging, but at present there is much slackness in the shipbuilding trade. Orders have decreased owing to the high cost of production and the weakness of freights, so that the promise for 1908 points at present to a poor out-turn.

Last year's overturn at the London Clearing House was larger by £19,059,000 than that of 1906, the total being £12,730,393,000. This seems at first sight a surprising fact considering the important decrease which has taken place in Stock Exchange business, but the deficiency in that quarter was made good and more by the larger business done throughout the country in manufacturing and distributing industries. The clearings of country cheques, for example, rose from £992,313,000 in 1906 to £1,073,443,000 last year. This was an increase of £8,113,000, and the improvement in the fourths of the month clearing was still larger, amounting as it did to £17,697,000, the total for the past year having been £542,513,000. Against these increases we have declines of £12,641,000 in the clearings on Consol settling days and of £209,309,000 in the ordinary Stock Exchange fortnightly settlement clearings. Business was better in the first half of the year than in the second half, but this has frequently happened before, and the fact remains that the increase of the past year was the seventh in succession. Dearer money naturally restricted operations both in the past year and in 1906 towards the end of the year, but the figures as a whole are vitiated for comparison, to some extent at least, by the inclusion since February 19 last for the first time of some 190 branches of the Clearing banks formerly kept outside. The highest total cleared in any one day was £106,703,000 on January 16, a total only once exceeded at any previous date, and the smallest amount of business handled was £28,132,000 on August 10. For a single week the highest total was in that ended January 2, which came to £331,213,000, but the larger portion of that week came into 1906. The smallest week was the one ended August 28, when the overturn came to £108,065,000.

That was the only complete week in the past year with a total of less than £200,000,000, and the business of the country would seem to be much more evenly distributed than was formerly the case, and violent ups and downs are much less prominent.

It hardly seems as if the English Press were drawing the right inference from the break-up of the Indian National Congress. Most of the comments we have seen consist in sneers at the lack of capacity for Parliamentary Government shown during the recent conflict that ended in a split. It would be small shame to the natives of India were they incapable of conducting debates and arranging for party divisions and ins and outs after the fashion prevalent in England, for they have never had the least opportunity to acquire the necessary discipline and habits of thought. The sneers are therefore misplaced on this ground, but even were they amply warranted indulgence in language of the kind seems to be hurtful in two ways—it excites resentment in the minds of the educated Indian natives against the British Government, and it disguises from the people of this country the gravity of the position in India. To us the very fact that passions should have been so heated at the recent Surat meeting as to bring about a violent rupture between the moderates and extremists, points to a state of mind amongst large classes of the Indian people ominous of danger, and it was the men of the West and North-West who were most determined and thorough in their demands, men from that part of the country which is now in the throes of famine. Might it not be worth while for our political teachers to examine somewhat beneath the surface in order to try and discover whether grievances may not exist in urgent need of remedy, remedy which must be found soon if our rule is to endure? There is nothing Imperial except its vanity in their present attitude.

The Indian famine is spreading, and at the date of the latest official telegram, December 30, the total number in receipt of State relief had risen to 81,378. Prices were tending to rise, and distress will obviously be great over nearly the whole Peninsula. Rain fell during the week in several districts of the Madras Presidency and here and there in other parts of Southern India, but all over the rest of the country there was no rain, and the Governor-General admits that if winter rains hold off much longer in distressed tracts, spring crops, the germination of which has been fairly good, will be seriously affected. He goes on to say that distress has not been so intense as yet as might have been expected from the early cessation of rains. There has been as yet little wandering and no marked increase in crime, but the effects of the scarcity and high prices are becoming increasingly evident, especially in the United Provinces. All this translated into plain language means that an appalling famine once more threatens tens of millions of the Indian native population.

Some pertinent facts were stated by Mr. Coles at the recent meeting of the Clerical, Medical, and General Assurance Company with regard to endowment policies. Twenty years ago, he said, the total of this class of insurance was under £26,000,000; it is now £217,000,000, or nearly half as great as the aggregate of "whole life" insurance policies outstanding. This is a significant change for several reasons, for the "whole life" policy is just as attractive as ever, not least because it is the cheapest. But the popularity of the endowment or soon-paid-up policy is enduring and increasing, for all that, and reasonably so. It is "one of the few forms of investment which should never show any shrinkage or loss consequent on financial depression." That alone makes the endowment policy attractive to prudent investors, and it has this other virtue—when the endowment matures it may be at once converted into a life annuity, thus, partially at least, solving for the thrifty few the old-age pension problem.

A writer in the December number of the *Liberty Review* propounds once more a scheme for what he calls "conservative Home Rule" for Ireland. He would establish a separate Irish Parliament, with two Houses, and cut down the representation of Ireland at Westminster to 40 members. By adopting a double-barrelled Parliament in Ireland, it is his opinion that absentee grandees would be attracted home again, and that, with due restrictions as to the scope of the local Parliament, harmony might be restored to the country and between the two countries. We are not so sure, and only allude to this subject, which is really not one that we can be wisely concerned with, to point out that the one abiding obstacle to the granting of genuine self-government to Ireland is the financial one. It was no doubt the impossibility of contriving any scheme whereby the taxation of Ireland could be continued on the present scale and all manner of local barnacle interests safeguarded which made the recent attempt of Mr. Birrell to legislate towards Home Rule such a phenomenal abortion. We have overloaded Ireland with burdens, just as we have contributed to overload every other portion of the Empire, and the first thing a genuinely representative assembly, whether single or double-barrelled, in Ireland would do would be to enter into a conflict with the British Parliament over this question of taxation. Ireland is over-taxed, and every effort would be made to demonstrate the impossibility of her continuing to contribute to the Imperial revenue on the present scale. The settlement of such a quarrel would be hopeless in our present circumstances when the demands of the spending departments continue to increase automatically, inevitably, to the ultimate destruction of all revenue elasticity. It is because this is the real difficulty in the way that we have long ceased to take a propagandist interest in any of the schemes propounded for satisfying the cravings of Ireland for semi-independence. The very debt created in the process of redeeming the land for the people will become a cause of strife.

Critical Index to New Investments.

Canadian Pacific Railway Company.

Shareholders in this company are offered an issue of $24,336,000 of new ordinary stock at par on the basis of 20 per cent. or one share in five of their respective holdings. At the present market quotation this represents a very handsome bonus, and shareholders have until February 19 to make up their minds whether to accept it or not. The price is payable in five instalments of $20 each at intervals of about two months, and in October next an interest payment of 1¼ per cent. will be made on instalments up to and including that of June 19, which have been paid on the due dates, while all shares which have been paid up on the due dates will rank for the full dividend accruing for the half-year ending December 31.

Commonwealth Oil Corporation.

Readers are already familiar with this undertaking, and the promising outlook recently set forth by Sir George Newnes. It now comes for £150,000 in 5½ per cent. first mortgage debentures of £50 each, which are offered at par. They will be repayable also at par on January 1, 1918, but the corporation reserves the right to redeem the whole or any part by purchases in the open market or by repayment at a premium of 5 per cent. at any date after January 1, 1911, on six months' notice given. Interest at the 5½ per cent. rate will be paid on instalments as received. The directors and their friends have agreed to take up half the issue if not otherwise subscribed, but shareholders will get the first offer of the whole, the public ranking after. One of the privileges attached to the issue is the right at any time after June 30, 1909, to call for the allotment at £2 per share of 25 deferred ordinary shares of £1 each for every £50 bond. Development of the undertaking in directions not originally contemplated is given as the reason for this additional capital requirement.

TRADE AND PRODUCE.

WHEAT.—Business has again been broken by holidays this week, most markets being closed on New Year's Day, but a revival in demand has been noticeable for all that. The price for nearly all wheats has hardened during the week, and if the colder weather continues a brisk demand for breadstuffs will set in. Supplies of native wheat continue small, farmers' deliveries for the week amounting to 43,417 qrs., averaging 34s. 6d., against 49,637 qrs., averaging 26s. a year ago; but those from abroad continue fairly large, this week 264,997 qrs. being imported from abroad. The quantities of wheat and flour on passage are estimated at 2,145,000 qrs., or 90,000 qrs. less than last week, and those going to the Continent are exactly the same at 1,020,000 qrs. American markets have also been more active, and subject to rather wide fluctuations towards the close of the week. Argentine reports were bearish, and also Bradstreet's statistics, putting the quantities in sight east of the Rockies at 66,110,000 bushels against 64,385,000 bushels last week, but under the influence of strong European cables and some large buying orders the tone became firmer.

WOOL.—This week's markets have again in most instances been of a more or less holiday nature, but yesterday at the larger wool centres a good deal of activity was to be seen, and the fall in the Bank rate inspired more confidence. Crossbred prices are not quite so low as they were just before Christmas, and top makers sold more in one day than they had done during the past two months. English wool prices also are better, several firms having advanced their quotations ¼d. The yarn market is active, local spinners being well engaged upon old contracts and taking in a fair number of new ones, though they are not very anxious to do much in the way of new business till they see values on a more sound basis. Among manufacturers, a good deal of depression continues. Mills are still well employed on present contract orders, but new business is almost entirely absent.

COTTON (from our Manchester correspondent).—The week under review in our market has been disturbed by the holidays. Few attempts have been made at active operations in either yarn or cloth. Buyers have not been stimulated to operate for more than small lots. On the whole, the outlook is rather uncertain, and most producers rather tend to lose ground. Raw cotton does not show much change, but the feature at the present time is the improvement in the forward movement of the American growth. In piece goods for export a miscellaneous inquiry has been dealt with, but shippers have not been in the mood to place orders of any weight. The general demand from India and China at the present time is unimportant. Most of our outlets abroad are fairly well supplied with goods, and buyers seem to be of the opinion that some advantage can be gained by holding aloof. Not much is heard at the moment of the Mediterranean outlets. Small lines have been mentioned for the South American markets. Home trade cloths have not commanded much attention, but the reduction in the Bank rate is welcomed by distributors generally. Burnley manufacturers are doing very badly. Many looms are stopped for want of work to go on with. The Masters' Association is endeavouring to organise a restriction of the output, but it is said their efforts will not be successful. T-cloths and Mexicans have dragged in demand. There has not been much doing in coloured woven goods and sateens. American yarns for home use have moved off quietly, and spinners are not quite so strong as a few weeks back. The supply in twists is increasing, and wefts are not so scarce as a few weeks ago. On the whole, spinners seem to be rather losing ground. In export descriptions not much has been done for any market. Two-fold descriptions are somewhat irregular, but most numbers in single yarns are fairly well sold. Bolton spinnings have moved off slowly, and the strong position of spinners is being undermined.

COAL.—Increasing demand has followed in the wake of the severe weather, especially for house coal, but as yet there is no rumour of any rise in price. Steam coal has not been very active, but it is still regarded as being in a satisfactory condition, and the prospects for this year are considered promising enough. Contracts for 1908 have so far been taken on at prices considerably above those ruling at the end of 1906, though they are not so high as a few months ago, the railway contracts of the North-Eastern having been settled at 11s. 3d. per ton as a halfway figure between the 12s. demand by the coal owners and the 10s. 9d. offered by the company. Coking coal and coke are the varieties that have dropped the most during the past few months, and from being as high as 25s. can now be had at current sales for 16s. per ton.

COPPER.—Dealings have been active during the four days that the market has been open, and under the improved financial position bear coverings and speculative purchases were numerous, and prices consequently went up. Three months' touched £63 10s., and near metal £62 15s. Yesterday afternoon the market was poorly supported, and under some large realisations values gave way, and to-night they close at £61 12s. 6d. cash and £62 7s. 6d. three months. Messrs. Henry R. Merton and Co., Limited, give the visible supply on December 31 as 19,710 tons, against 15,789 tons at the end of November. The total supplies for December were 50,925 tons and the deliveries 47,004 tons compared with 43,228 tons and 40,167 tons respectively for November. The stocks in England and France amounted to 13,060 tons, against 10,189 tons at the end of November. The Chili charters totalled 2,550 tons.

TIN.—A strong upward movement in values took place during the first two days, due to some speculative buying and the steadiness of the Eastern markets, and prices on Tuesday's first exchange reached £124 10s. for cash metal and £125 10s. for three months. Yesterday they reacted again. Eastern cables were lower, and the indifferent statistics published for the past month had a depressing effect. Selling pressure in the afternoon led to a further break, and values closed at £120 10s. cash and £122 three months. A further relapse to-day left quotations at £118 10s. cash and £119 10s. three months. Messrs. A. Strauss and Co. give the visible supply as 12,362 tons against 12,644 tons a month ago. The total shipments on the spot last month landing amounting to 5,022 tons, against 4,050 tons a month ago. The London deliveries for December were 1,430 tons, and 1,200 Dutch 1,214 tons, making an aggregate of 2,714 tons against 2,498 tons for November. Straits shipments total 3,550 tons, of which 2,620 tons are for London, 730 tons for the Continent, and 200 tons for the United States.

IRON AND STEEL.—The immediate outlook for Iron and Steel does not promise much if any improvement, and makers are pinning their hopes to the lowness of stocks to help the statistical position. Makers of ordinary pig-iron are following the same plan, and by blowing out furnaces and keeping down production are gradually reducing the stocks in store. In fact, such a rapid decrease in them, says the Ironmonger, is without parallel. In Connal's stores at the commencement of the year were 538,154 tons of Cleveland pig-iron, on December 21 only about 90,000 tons were left, and all of that is the better qualities. Holidays this week have interfered with business, and the trade generally is looked upon as at a standstill. Prices for raw material are lower than they have been for nearly two years, and manufacturers are now bringing down theirs in the hope of obtaining fresh orders.

SUGAR.—The past fortnight has seen continued firmness in the market, quotations for May beet rising from 10s. 1½d. to 10s. 3½d. This better tone, Mr. Czarnikow states, is largely attributable to more inquiry for white sugars, of which stocks in traders' hands were very small. Also the sharp frosts abroad and the fear that river navigation might be interfered with helped to force dealers' hands, and the decline in the Bank rate has helped holders. Another reason for the improvement is supposed to be supplied by the small Cuban receipts, which sounds rather strange, says Mr. Czarnikow, "considering that the early canes last year yielded only about 6 per cent. against a normal 10 per cent., and that postponement in December really means a comparatively better crop, provided the weather in January-May is favourable for grinding the entire crop. We can understand speculation based on the final stages of production, which allow conclusions to be drawn as to the final total, but to act on December Cuban figures seems like acting on September beet production. Perhaps operators expected to supply an imminent American demand for beet to arrive at the same time as new Cubans, and much later than Louisiana sugars which cost 1s. less. Anyhow, the Cuban receipts are being closely watched this season, and on them the future will no doubt largely depend. Latest cables from the island report rain, and canes much smaller, but yielding better, 24 against 122 centrals being at work. The estimates still vary between 1,000,000 and 1,200,000 tons, thus showing a large deficiency for United States, from which must be deducted the Louisiana surplus. Two years ago America was able to attract 100,000 tons more Java than last season, and she may be able to do so again, but even in that case there might be some beet requirements towards the end, unless consumption falls off. If we get sufficient Russians we can spare some beet, but against a further increase in consumption next season we may have a surplus only from countries which gave bad results this year, viz., Cuba, Mauritius, Germany, France, &c., because a substantial increase in beet sowings seems very doubtful." New York market remains firm at 3.85 cents, but there is not much offering. Landings for the two weeks were 34,000 tons, meltings 55,000 tons, reducing stocks to 116,000 tons.

MINING RETURNS.

Brilliant Gold.—Crushed 550 tons; value, £1,598.

British Broken Hill.—878 tons crude ore produced 136 tons concentrates, containing 86 tons lead and 3,808 ozs. silver

Broken Hill Proprietary.—Silver, 260,316 ozs.; soft lead 4,231 tons; antimonial lead, 55 tons; zinc concentrates, 6,572 tons, containing silver, 109,046 ozs.; lead, 735 tons; zinc, 2,666 tons.

Chinese Engineering.—Output of coal 22,500 tons; sales, 17,000 tons; consumption, 1,675 tons.

Duff Development.—Prospecting dredge, 24 ozs. No 1, 33 ozs.; No. 2, 29 ozs.

Lloyd Copper.—Production 95 tons.

Mills' Day Dawn United.—Treated 1,440 tons; value, including residues, £5,100.

New Queen.—Crushed 94 tons, 97 ozs.; concentrates, £20.

New Ravenswood.—Crushed 1,526 tons ore, value £5 [illegible]; 144 tons concentrates, value £1,500; tailings 109 tons concentrates produced, value £1,320.

No. 2 South Great Eastern.—Crushed 850 tons, 522 ozs.

Nymagee Copper.—Production 66 tons.

"O.K." Copper.—1,000 tons ore treated, producing 75 tons fine copper.

Peiser Diamond.—10,150 loads ground washed, yielding 1,[illegible] carats diamonds, an average of 10·26 per 100 loads.

Pfeiffer's Day Dawn.—Treated 1,208 tons quartz for a total value, including residues, of £5,460.

Raub Australian.—Crushed, 5,148 tons, 1,102 ozs.

Transvaal Gold.—Crushed 9,555 tons, 2,843 ozs.; central cyanide, 3,887 tons, 1,242 ozs.; central slimes, 3,[illegible] tons, [illegible] ozs.; Kameel's cyanide, 1,312 tons, 224 ozs.; Kameel's slimes, [illegible] tons, 134 ozs.; Elandsdrift, 280 tons, 104 ozs.; total, 5,501 ozs.

Victoria-Proprietary.—Crushed 645 tons, 271 ozs. from plates 101 ozs.

Whim Well Copper.—Shipment 98 tons copper ore, assaying 21 per cent.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for the week ended Dec. 21, $6,442, increase $2,417; aggregate from July 1, $133,716.

Argentine North Eastern. — Traffic receipts for week ended November 29, £2,448, increase £1,043; aggregate from July 1, £63,914, increase £4,419.

Assam Bengal.—Traffic receipts for week ended November 30, Rs. 89,593, increase Rs. 3,850; aggregate from July 1, Rs. 21,57,627, increase Rs. 1,34,381.

Bilbao River and Cantabrian.—Traffic returns for November, £9,071, decrease £2,123; aggregate from January 1, £100,047, decrease £12,676.

Buenos Ayres Central.—Gross receipts for November £9,341, decrease £204; aggregate from Jan. 1, £122,983, increase £12,321.

Canadian Northern Railway.—Traffic receipts for week ended Dec. 21, $185,700, increase $68,100; total from July 1, $5,072,000, increase $1,327,600.

Egyptian Delta.—Traffic receipts for week ended December 14, £6,623, increase £242; aggregate from January 1, £191,921, increase £19,501.

Lucknow Bareilly Railway.—Traffic receipts for week ended November 30, Rs. 32,484, increase Rs. 1,880 aggregate from July 1, Rs. 5,74,528, increase Rs. 13,690.

Midland Uruguay.—Receipts for month of November, £6,600, increase £787; aggregate from July 1, £30,377, increase £3,135.

North Western of Urugnay.—Traffic receipts for Nov., $20,000, decrease $965; aggregate from July 1, $106,256, increase $5,319.

Quebec Central Railway.—Traffic receipts for the 3rd week of December, $17,773, increase $2,749; aggregate from January 1, $985,458, increase $102,862.

Quebec and Lake St. John.—Traffic increase for Nov. $909, aggregate receipts $600,261, increase $54,603.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended November 30, Rs. 24,464, increase Rs. 3,154; aggregate from July 1, Rs. 4,82,722, increase Rs. 40,197.

Uruguay Northern.—Gross receipts for month of Oct., £2,235, increase £923; aggregate from July 1, £7,502, increase £802.

White Pass and Yukon Railway.—Traffic receipts for week ended December 14 amounted to $3,025.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending December 28, £1,270, decrease £74; aggregate from July 1, £35,190, increase £1,533.

Cockermouth and Keswick Railway.—Receipts for week ending December 28, £696, increase £102; aggregate from July 1, £24,500, increase £1,110.

East London Railway.—Traffic receipts for October, £3,892, decrease £546.

East and West Yorkshire Union Railways.—Traffic receipts for the week ended December 28, £153, decrease £21; aggregate from July 1, £11,197, increase £1,850.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending December 25, £799, decrease £74; aggregate from Jan. 1, £40,539, decrease £1,952.

Blessington and Poulaphouca.—Traffic receipts for week ending December 25, £8, decrease £2; aggregate from July 1, £518, decrease £62.

Bristol Tramways and Carriage.—Traffic receipts for week ending December 27, £5,790, increase £358; aggregate from July 1, £134,866, decrease £559.

British Electric Traction.—Receipts of all the Associated Companies for the week ending December 27, £31,121; 427¼ miles.

Burnley Corporation.—Traffic receipts for week ending December 28, £1,426, increase £162.

Dublin and Blessington.—Traffic receipts for week ending December 25, £116, decrease £6; aggregate from July 1, £3,751, decrease £99.

Dublin and Lucan.—Traffic receipts for week ending December, 27, £129, increase £9; aggregate from July 1, £3,423, increase £223.

Dublin United.—Traffic receipts for week ending December 27, £5,415, increase £593; aggregate from July 1, £168,020, increase £31,758.

Edinburgh and District.—Traffic receipts for week ending December 28, £4,918, increase £542; aggregate from January 1, 1907, £257,110, increase £2,644.

Hastings and District.—Traffic receipts for week ending December 26, £991.

Isle of Thanet.—Traffic receipts for week ending December 28, £274, increase £92; aggregate from Oct. 1, £3,909, increase £182.

London County Council.—Traffic receipts for week ending December 21, £32,017, increase £4,761; aggregate from April 1, £1,193,551, increase £197,170. Miles 115¾, against 116¼.

London General Omnibus.—Traffic receipts for week ending December 28, £16,622, increase £2,134; aggregate from July 1, £531,168, decrease £47,659.

London Road Car.—Traffic receipts for week ending December 28, £6,908, increase £1,977; aggregate from July 1, £220,593, increase £21,543.

London United.—Traffic receipts for week ending December 27, £6,695, increase £1,281; aggregate from January 1, £334,119, increase £15,351.

Provincial Trams.—Traffic receipts for week ending Dec. 28, £1,685, increase £209; aggregate from Oct. 1, £19,456, increase £934.

Rossendale Valley.—Traffic receipts for week ending December 27, £221, increase £11.

Sunderland District.—Traffic receipts for week ending December 25, £549, increase £81; aggregate for 8 weeks £3,702, increase £450.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending December 29, £1,437, increase £224; aggregate from January 1, £60,479.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending December 23, £18,360, increase £981; aggregate from January 1, £863,859, increase £80,586.

Auckland Electric. — Traffic receipts for four weeks ending December 6, £11,788, increase £1,463; aggregate from January 1, £126,351, increase £6,464.

Brisbane. — Traffic receipts for month of November, 1907, £13,570, increase £1,734.

British Columbia Electric.—Nett earnings for November $86,047, increase $30,272. Aggregate nett earnings, including income from investments from July 1 to Nov. 30, $407,476, increase $117,168.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for 8 days ending December 31, £9,301.

Calcutta.—Traffic receipts for week ending December 28, Rs. 51,128, decrease Rs. 26,025; aggregate from January 1, Rs. 25,11,279, increase Rs. 1,39,136.

Cape Electric.—Traffic revenue for month of November, Cape Town, £9,826; Port Elizabeth, £2,797.

Carthagena and Herrerias.—Traffic receipts for the month of December, £3,254, decrease £2,252; total from January 1, £51,131, decrease £1,396.

Geneva Trams.—Earnings for November, fr. 188,351; increase fr. 8,024.

Kalgoorlie Electric.—Traffic receipts for November, £3,790; aggregate from January 1, £43,715.

Lisbon Electric.—Earnings for November, milreis 46,117.

Madras Electric.—Traffic receipts for fortnight ended December 31, Rs. 20,285, increase 14 per cent.; aggregate from January 1, Rs. 4,16,750, increase 19½ per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for November, £53,500.

Mexico.—Nett earnings for month of September, $203,525, increase $21,796; aggregate nett earnings from January 1, $1,545,283, increase $93,126.

Perth (W.A.) Electric. — Traffic receipts for week ended December 27, £1,910, decrease £214; aggregate from January 1, £73,473, decrease £3,058.

Rio de Janeiro.—Nett earnings for November, $213,640; aggregate from January 1, $1,951,966.

The Subscription List will open on Monday, 6th January, and close on Friday, the 10th inst., for London, and Saturday, the 11th, for the Country.

The Full Prospectus, of which this is an abridgement, has been filed with the Registrar of Joint Stock Companies, and applications for Debentures will only be received upon the terms of such Full Prospectus.

THE COMMONWEALTH OIL CORPORATION, LD.

(Registered under the Companies Acts, 1862 to 1900.)

SHARE CAPITAL - £800,000.

Divided into 500,000 Preferred Ordinary Shares of £1 each, all of which have been issued and are paid up to 18s., and 300,000 Deferred Ordinary Shares of £1 each, of which 225,007 have been issued and fully paid up or credited as such.

Issue of £150,000 5½ Per Cent. First Mortgage Debentures in Amounts of £50 or Multiples of £50.

PAYABLE AS FOLLOWS:—

On Application	£5	In respect of each £50 applied for.

Bankers:
Bank of New South Wales, 64 Old Broad street, London; and Sydney.

Solicitors:
Messrs Light and Fulton, 1 Laurence Pountney hill, London, E.C.

Brokers:
Messrs Stephen C. Cork and Son, 30 Throgmorton street, E.C.

Auditors:
Messrs Josolyne Miles and Blow, 28 King street, Cheapside, London, E.C., Manchester and Paris.

Secretary and Offices:
Charles F. Jones, 26 Victoria street, London, S.W.

Subscriptions are invited for £150,000 in 5½ per cent. First Mortgage Debentures.

The issue will be in the form of Registered Debentures in amounts of £50 or multiples of £50, and will be a floating charge upon the entire undertaking and assets of the Corporation (including uncalled capital). They will be repayable at par on the 1st day of January, 1918, but the Corporation reserves the right to redeem the whole or any part thereof by purchasing Debentures in the open market or by repayment at a premium of £5 per cent. at any time after the 1st day of January, 1911, on six months' notice.

Interest at the rate of 5½ per cent. per annum will be paid on the moneys for the time being paid up on the Debentures until the final instalment is paid. As from the date of payment of the last instalment, Debenture-holders will be entitled to interest at the rate aforesaid (calculated from such date) on the nominal value of the Debentures held by them. Such interest will be payable half-yearly on the 1st July and 1st January in each year, the first payment (calculated as aforesaid) being made on the half-yearly date next following the date of payment of such last instalment.

The Directors and their friends have agreed to take up half the said issue, if not otherwise subscribed.

Instalments may be paid in advance, on allotment, or on any of the prescribed dates for payment, and interest will be allowed upon all payments in advance at the rate of £5½ per cent. per annum. If a smaller allotment is made than is applied for, the deposit will be applied in or towards payment of the amount due on allotment, and if no allotment should be made the deposit will be returned in full.

The allotment of Debentures will carry with it the right at any time up to 30th June, 1909, to call for the allotment at £2 per share of 25 Deferred Ordinary Shares of £1 each for each £50 Debenture held, so that if the Deferred Ordinary Shares stand at a higher price than £2, the Debenture holders will have the opportunity of acquiring them at this price without being under any compulsion to take them. These Deferred Shares stand at a substantial premium, and before the present financial depression were largely dealt in at upwards of £3 per share.

A brokerage of 10s per cent. will be paid to Brokers in respect of applications for Debentures accepted on forms bearing their name.

An application will be made in due course to the Stock Exchange for a settlement in and an official quotation of the Debentures.

The Company has issued the following shares as fully paid up, and for a consideration other than cash, viz.: 225,000 Deferred Ordinary Shares of £1 each in part consideration for the purchase of the properties acquired by the Company under the Agreement mentioned in Clause III. of the Articles of Association of the Company.

The following material contracts have been entered into by the Company within the last two years, in addition to agreements in the ordinary course of business.

30th March, 1906.—The New South Wales Shale and Oil Company, Limited, and the Commonwealth Oil Corporation, Limited.

9th October, 1906.—The Commonwealth Oil Corporation, Limited, and Kelso King and George Montague Merivale.

10th January, 1907.—The Commonwealth Oil Corporation, Limited, The New South Wales Shale and Oil Company, Limited, and the Australian Gaslight Company.

Copies of the Memorandum and Articles of Association of the Corporation and the form of Debenture, the Agreements referred to, and the last printed Balance Sheet can be seen at the registered office of the Corporation, 26 Victoria street, Westminster, while the lists remain open.

The Company was incorporated on the 8th day of December, 1905, for the purposes of acquiring extensive Shale Properties at Wolgan and Capertee, in the State of New South Wales, and of manufacturing, refining and dealing in shale, oil and other products to be made therefrom.

Since the formation of the Company opportunities have arisen for further profitably developing the resources of the undertaking in directions *specified in the full prospectus*, which were not originally anticipated, involving an expenditure, incurred and estimated, of £150,000.

Amongst the assets and properties of the Corporation are:—

1. Upwards of 30 square miles of shale and coalfields, situated at Wolgan and Capertee, and held under Government leases.
2. Power, electric lighting and mining plant, works and town site, dwelling-houses, offices at Wolgan.
3. The coal mines and coke ovens.
4. The railway of the Corporation connecting the before-mentioned properties with the Government system of railways now working.
5. The railway plant, rolling stock and buildings.
6. The undertaking formerly carried on by the New South Wales Shale and Oil Company, Limited.
7. The new crude oil plant and other plant and machinery at Torbane.
8. 130 acres of freehold land at Parramatta, near Sydney.

The following is the Report of Mr. D. A. Sutherland, the Consulting Engineer of the Corporation:—

"1. Having regard (a) to the very satisfactory development of the Wolgan-Capertee shale fields, and the proving of enormous deposits of shale in greater thickness and richer quality than my earlier investigations warranted me in anticipating; (b) to the successful construction of the railway connecting the properties, formerly without means of communication, with the main line to the seaboard: (c) to the discovery of deposits of coal of good coking quality, the existence of which, when the properties were purchased by the Company was unsuspected, I have no hesitation in stating that in my opinion the value of these properties has very largely appreciated, and is far greater than the sum at which they stand in the Company's books, whether such value is taken upon the basis of royalty or acreage.

"2. Since the formation of the Company the original area of the shale and coalfields has been greatly increased.

"3. I estimate the shale proven at 20,000,000 tons, and that presumable at not less than a further 30,000,000 tons.

"4. Though the coalfield has not been prospected or developed to the same extent as the shale field, the results found by shafts and adits indicate that the coal lies as regularly as the shale.

"5. The properties and works of the New South Wales Shale and Oil Company purchased last year have been much enhanced in value by the development and improvements, and represent a much larger amount than that standing in the books.

"6. The plant, buildings, machinery, with freehold land since purchased, and other realisable assets not already mentioned, are now greatly in excess of the amount shown in the Balance Sheet of 30th June, 1907.

"I have, therefore, no hesitation in stating that the assets are of the most ample character and that their value is far in excess of the proposed Debenture issue.

"D. A. Sutherland.

"25, Victoria Street, S.W.
"31st December, 1907."

The following figures, extracted from the Balance Sheet of the Company made up to the 30th June, 1907, and presented to the Shareholders at the recent Annual General Meeting, show the amount (at cost) at which the properties and assets of the Company stand in the Books of the Company as at that date.

	£ s. d.	£ s. d.
Properties, etc., at Cost	300,000 0 0	
Freehold Land, Leases, Roads and Maintenance	18,885 2 3	
		318,885 2 3
Railway Construction	82,755 12 8	
Railway Rolling Stock, Buildings, Loose Plant, etc.	11,544 1 11	
		94,299 14 7
Plant, Machinery, Buildings, Fittings, Furniture, Horses, etc.		38,385 0 0
Development, Prospecting, and Surveying		35,484 17 6
Purchase Price of New South Wales Shale and Oil Company	42,000 0 0	
Advances on account of Current Expenses and New Capital Expenditure	26,108 1 10	
		68,108 1 10

Further sums amounting to £100,000 have been since called up, which with the remaining call of 2s. per share have been or will be applied for the general purposes of the Company and the development of the resources of its undertaking. The proceeds of the present Debenture issue, subject to the expenses in connection therewith, will also be available for the same purpose.

The Directors desire to point out that the New South Wales Shale and Oil Undertaking is, at present earning substantial profits, and that other large sources of income are approaching realisation now that the Railway is in working order.

Prospectus and Forms of Application can be obtained from the Bankers, Solicitors, Brokers, Auditors, or from the Secretary of the Company.

London, 2nd January, 1908.

The Investors' Review.

The Week's Money Market.

BANK RATE 6 PER CENT. (Reduced from 7 per cent. on January 2.)

Norfolk House, Friday Evening.

We suppose the Bank of England directors felt they had no help for it, otherwise we really fail to discover adequate reasons for their decision to lower the minimum rate of discount by 1 per cent. this week. The open market, however, has beaten the Bank, and set every element of caution at defiance. Within a week bill brokers drove the rate on three months' remitted paper down 1 per cent. It was a tremulous 6 per cent. last Friday, and yesterday morning it was barely 5 per cent. With the open market 2 per cent. below it, what could the Bank of England do except come down, no matter what the risk may be? The fact must, therefore, be accepted, and all dealers in credit can do is to try and make the best of it. They have got their own way, and were prudent enough yesterday, after the decision of the Bank Court became public, to stop beating the market down. Most discount houses refused to work below 5 per cent., and the rate was easier in the morning than in the afternoon. Some vendors, indeed, told us that they had sold their three months' paper at 4⅞ per cent. in the early part of the day, but that was not the general rate, and if money continues dearish, as it must, the probability seems to be that the open market will not go down further. It was certainly firm to-day at 4⅞ to 5 per cent., and even six months' bank bills could not be disposed of under 4½ per cent. For a good deal of paper of this usance the quotation was 4¾ per cent. A heavy American mail came in to-day, and increased the rush.

Yesterday day-to-day short money commanded 4½ to 5 per cent., and the seven-day rate was 4½ per cent. Much the same quotations prevailed to-day. This is a great reduction compared with the 5½ to 6½ and 7 per cent. paid in the last few working days of the year in the open market and 7½ per cent. charged at the Bank. On Tuesday, indeed, some borrowers had to pay 8 per cent. in the open market. The rates now quoted, however, are, if not the lowest, not far from the lowest the market is likely to see this month. When the loans due at the Bank have all been paid off it will be as short as it was before, if they are all paid off. Altogether the market seems to have borrowed about £15,000,000 at the Bank up to the 31st inst., and over and above its discounts. About half this money was repayable in the first two days of the current year, and the Bank return indicates that £7,773,000 remained due yesterday morning on these temporary borrowings. Other securities, in fact, are still as high as £40,808,000, and we should infer from this that the entire debt of the market to the Bank on bills and loans yesterday considerably exceeded £10,000,000. It paid off perhaps £3,000,000 more to-day, and it owes even now much more than the

Government dividends represent. In addition it has to find the taxes now in course of collection. Unusual zeal, not to say a hustling disposition, is being displayed by the tax-collectors, which, if responded to, cannot fail, when supplemented by the repayments to the Bank, to make the open Money market hard up by about the middle of the month. It had some difficulty this morning in repaying the whole of the day's amount due to the Bank, but that was probably because this was pay-day in the Consol market. The account in the stock may not be extensive, though borrowers upon it did have to pay 5¼ to 5½ per cent. for loans to February, but there is so little spare money about.

The joint-stock banks have not altered their deposit rates, which continue at the maximum 4 per cent., but discount houses have come down to 4 per cent. for call and 4¼ per cent. on notice money.

What is the outlook in regard to gold? It is anything but reassuring. The market lost its head over that purchase of the stock in the market by the Bank last Monday. Altogether it secured about £800,000 at 77s. 9½d., and there was no indication of American buying or of any foreign demand. And threatened German demands were diverted by the arrangement made in Paris, bankers there having agreed to advance a large amount to their German brethren at 6 per cent. for three months with a guarantee of the exchange. Gold, however, is still wanted, if not for the United States, for Germany as well as for the Argentine Republic, and presently, and above all, it will be wanted for Paris. It is estimated in the best-informed quarters that at least £2,000,000 in the metal will be withdrawn for Buenos Ayres within a very short time. The position of the Bank of France, too, is anything but suggestive of delay in asking repayment of its lent gold, for its return this week shows an expansion of £10,653,000 in the note circulation accompanied by a reduction of £590,000 in the stock of gold in hand. This brings the proportion between bullion in circulation down to 70.90 per cent. as against 75.31 per cent., but that proportion includes the silver, and if we take the gold alone the proportion it bears to the active note circulation is now little more than 52 per cent. Apparently nothing further is feared in the way of demands from Egypt, although vague talk of "a million going" was heard this morning, but it seems to be fairly deducible from this recital that the gold to come from the mines during the next six or eight weeks may not be sufficient to off-set foreign demands for the metal. Should it not be so then in addition to other causes of dearness in the short credit market, a renewal of gold exports must be added, and the position of the market may again become strained.

Next week there will only be about £360,000 of raw gold in the open market. The price there remains at 77s. 9½d., but the market looks for competition from Paris, and there have been inquiries from other quarters during the past few days. American buyers, however, are giving no sign of existence, and we doubt very much whether the power of financiers in the States is sufficient to enable them to continue to draw away much gold. At the Bank £192,000 of the bars bought in the beginning of the week was received. South American banks have been offering bills for discount this morning, and the market talks of £300,000 to £500,000 being withdrawn for Buenos Ayres to-morrow. About £200,000 from Paris has passed through our market to the same destination.

SILVER.

Sellers have been inclined to hold off the market this week, and at the same time there has been a fairly steady stream of orders from both India and China, with the result that prices rose on Tuesday from 24⅛d. per oz. for cash and 24⅜d. per oz. for future delivery to 24⅞d. and 25⅛d. There was a pause on Wednesday owing to all the Eastern markets being closed for New Year celebrations, but the upward movement was resumed on Thursday with advances to 25⅛d. and 25 5/16d. per oz. respectively, and to-day there was a further gain of 7/16d. to 25 9/16d. and 25¾d., making improvements of 1⅛d. and 1 1/16d. per oz. on the week. Applications for the Rs. 50,00,000 Council drafts on India on Wednesday reached a total of Rs. 2,38,89,675 for bills and Rs. 59,00,000 for telegraphic transfers. Of these Rs. 37,14,000 were allotted in bills and Rs. 12,86,000 in transfers, tenders at 1s. 3 29-32d. and 1s. 3 15/16d. per rupee receiving about 14 per cent. Next Wednesday another Rs. 50,00,000 will be offered.

The Stock Markets.

Markets, we fear, have been going a little too fast. Having made up their minds that the Bank rate was coming down and that cheap money was certain to arrive before long, members of the Stock Exchange bought freely before Christmas and continued buying in the beginning of the current week, so that when Thursday came there was a considerable bull account

in existence. The Bank rate was reduced, although most people hardly looked for a change this week, and immediately markets slackened off. Members, finding the public demand below expectation, endeavoured to undo their commitments, and the close last night was about the lowest in most speculative groups. This is nearly the invariable market routine. Coming favourable changes are always anticipated by the market, which beforehand drives prices up so fast as to frighten the public away rather than attract it. So when the expected happens it often produces, for a time at least, results the very opposite to what the market hoped for. Probably enough, if money continues to go down in price the dip of yesterday will be quite transitory, and we shall see the advance resumed. Markets will be eager to discount the next reduction in the Bank rate, the public will take courage and buy, and as long as credit is available to carry positions with, the market thus helped will in the main tend to go higher.

It must not, however, be forgotten that thus far the rise is a credit-induced affair in most parts of the market. The public is undoubtedly buying and disposed to buy, but its pace is much slower than that of the professional operator; and he has therefore to carry on borrowed money most of the stocks he has bought in anticipation of the public demand. We therefore look for stiffish rates at the first settlement of the New Year and do not expect any real ease inside the Stock Exchange until the rather distended account in some directions has been reduced by the action of investment buying. If a miscalculation has been made about the course of the Money market, which is possible enough, then prices will go back sharply and with disagreeable consequences to too many rash operators.

Trustee Securities.

Consols are nearly £1 up for cash and more than £1 up for the account compared with the closing prices of the day before Christmas, and the other trustee stocks, both national and municipal, have gone up in sympathy. India stocks in particular have been in request and remarkably firm. A fine improvement has likewise occurred in London County Threes, and altogether the market seems as buoyant as if money were 3 per cent. instead of 6 per cent. and upwards. Provincial Corporation issues have not participated much in this recovery, but they are steadier, and one of these days the public may come after them. The colonial group of stocks, however, has advanced in a body, at a somewhat irregular pace representing improvement of from 1 to 2. Scarcely an issue of the least importance has escaped the sentimental influence, and there has been a good deal of investment buying in Australian and New Zealand stocks, as well as a fair business in Cape 3½ per Cents.

Foreign Government Stocks.

Continental Bourses have been able to get over the end of the year with remarkable smoothness, and the effect of this is seen in harder prices. German and Prussian 3 per Cents., for example, are better, but that may be because the Paris moneylenders have come to the assistance of the German markets by lending them a large sum for three months at 6 per cent., with a guarantee of the exchange at which the money will be repaid. This timely help has contributed to ease things in Berlin, and both the German and French markets have accordingly shown strength, with improvements in Argentine, Brazilian, Russian, and Japanese bonds. A misapprehension in Paris about the price of Japanese 4 per Cents. on the London market—quoted here xd.—caused the Paris quotation for these bonds to be put down temporarily, but the mistake was soon discovered and the price raised again. Here both the 4 and 4½ per cent. Japanese loans have been in demand, and they close at improved prices, especially the second 4½ per cent. issue. A large business has also been done in the 5 per Cents.

Home Railway Stocks.

Agreements between rivals, rearrangement of competitive traffic with a view to economy and advances in fares and freight charges, have contributed to make Home Railway stocks unusually popular, and they did not give way much yesterday in spite of the general disappointment felt at the absence of energetic outside buying. Buying, indeed, was considerable and intermittent in the favourite Home Railway stocks after the New Year's Day holiday had passed, and compared with the day before Christmas many improvements of 2 to 4 or more are the result of the market's energy, helped by the investor. Play, or investment buying as you please, has centred upon the deferred stocks of the Scotch Railways, on Great Eastern, Great Northern deferred, Great Western, North-Western, South-Western deferred, Brighton deferred, North-Eastern, and Dover "A" stocks, all of which are cheeringly harder. Metropolitan, too, has come in for some attention, and was dealt in yesterday as high as 41½, leaving off at 41. They are helped by the miserable condition of the motor 'bus. Quite sharp improvements have also been attained by some of the guaranteed and preference issues, especially those of the Caledonian, Great Central, and North British companies, and Chatham preferences are £4 to £5 better with a small business daily going on in them. Some of these advances will probably be retained and improved upon; others we fancy have already gone far enough. But the final traffic figures for the half-year are hope inspiring. The increase brought about by the holiday traffic was £178,675, bringing the total increase for the 26 weeks up to £1,738,731. Improved dividends are therefore looked for in spite of dear coal and higher wages.

Indian and Colonial Railways.

Indian Railways have not shared in the popular movement to any extent and business in them continues minute, but prices are better, as a rule, and some things, like South Indian guaranteed and East Indian new debenture stock, are 1½ to 2 higher. A furious business continues in the shares of the Can Pac Company and the wonder is, with all the advantages given to bulls by the new issue, that the rise has not been greater. It is really only $4 compared with December 24, and each day's battle serves to emphasise the energy with which the bears fight. Even the market estimates that the new share issue will give a bonus of $9 per share to holders, and when that is added to the dividend the handicap upon the bear is a very heavy one. Still he perseveres, and last night the day's struggle ended slightly to his advantage. It is a curious and at times exciting campaign. Play in Grand Trunk ordinary and third preference stocks has been much more sedate, and prices have gained very little. Changes amongst other Colonial Railway issues are for the most part favourable but without signs of extensive dealing.

United States Railroad Shares.

United States affairs are followed so closely under "American Business Notes" that it seems unnecessary to analyse the market movements to any elaborate degree in this column, and save in Union Pacific, Atchison, Missouri, and Pennsylvania shares there is really comparatively little going on. Interest on this has either died down or is limited to realisations on any favourable opportunity. In spite of all the newspaper-fomented optimism, moreover, Wall Street is neither happy nor busy, and it continues to be hampered by dear money. Nothing, indeed, is settled over there except the certainty that the business of receiver in bankruptcy is going to be an exceedingly brisk and profitable one this year. In the interval since the last comparison was made changes have been insignificant, the largest in the entire list being a relapse of about $2 in Atchison ordinary, a company whose traffic figures, like those of many other roads, continue mysterious. Bonds were firmer on the whole, and most of the infrequent changes in them are favourable. Even Chicago Great Western issues have risen in spite of the seemingly hopeless position of that undertaking. Buying, however, has been encouraged by the report that

the Can. Pac. is going to buy up the derelict for the sake of its position in Chicago City. We hope Mr. Stickney may be able to drive a good bargain, for if not the buyers will be "sold," as usual, with the poor "Maple Leaf" wad. Perhaps, however, the hoist is all manipulative.

FOREIGN RAILWAYS.

Argentine Railway stocks have led in the improvement shown by this Miscellaneous group, and yet business has not been very extensive in them, because people are waiting for confirmation of the favourable reports about the harvest. They will not have to wait long as a great deal of the wheat must now be reaped, and even in the southern parts of the Republic the harvest should now be in full swing. All reports continue to indicate a splendid crop, a crop in many parts equal to from 17 to 18 bushels per acre. Oddly enough, grain buyers from the United States seem to be travelling through the Republic, nominally to spy out the land, but it is suspected also to buy if they see a chance of turning a cent honestly or otherwise; or in the hope perhaps that something like a league or monopoly may be formed between the grain merchants of Argentina and those of the United States. Other Foreign Railways offered nothing notable during the interval, and the only active group has been the Mexican, where prices have been as firm as in the Argentine group. Brazilian Railway stocks have also been lifted, although the public is not visibly enamoured of them.

BANKS, BREWERIES, &C.

Scarcely a bank share in the whole list has moved the wrong way since we wrote last. Most of the fairly numerous changes are, therefore, improvements of ¼ to ½, and London and County and National Provincial shares have all risen 1, those of the London and Westminster 1½ and London and South-Western 1. The dividends so far announced are certain to confirm the public in its favourable sentiments towards this class of investment. The Brewery market remains quite unaffected, but there has been some fairly energetic manipulation of the stocks of the London and India Docks Company, and the preference and ordinary are distinctly better.

COMMERCIAL AND OTHER SECURITIES.

The revival cannot be said to have extended to either the great Commercial and Industrial assortments or to any of the minor groups in the market. We need not, therefore, dwell upon the small changes visible there, and there are hardly enough big ones to deserve mention. As to tendency, however, it is worth while noticing some recovery in debenture issues, a rise in the shares of James Nelson and Sons, improvements in Lipton's shares, the shares of the International Tea Company, of the Nobel Dynamite Trust, of the Fine Cotton Spinners Company, and of the California Oilfields Company. Nitrate shares have not given way in consequence of the strike any more than the shares of the Nitrate Railways, and altogether this part of the market may be considered firm.

In a sense the same observation applies to Electric Lighting securities, although the debenture stock of the Edmundson Company has been put down 2½. Financial Land and Investment shares and debentures are generally steady enough, in spite of some little recoil in Peruvian Corporation ordinary, and there has been a jump of ⅝ in Port Madryn shares, but the largest improvement of all is in the income stock of the Argentine Land and Investment Company, which has gained 6. Hudson's Bay shares have fallen since the dividend. All the changes amongst Financial Trusts are favourable, noticeably those in the issues of the Stock Conversion Company. Insurance shares have also kept up with scarcely an exception, and the rare changes amongst Iron, Coal, and Steel shares and stocks have generally been to the good. United States Steel Trust sinking fund bonds have been put up to 89½. Shipping shares, too, have been firm on the whole, especially those of the Cunard Company, and the changes amongst Telegraph and Telephone securities are upward, Anglo deferred being in demand, with a little inquiry also for the stocks of the Eastern Company and of the National Telephone Company. Amongst Tramway and Omnibus securities the only noticeable incident has been a sharp further decline in London General Omnibus ordinary stock. It is accompanied by a drop of 3 in the debentures.

FRIDAY NIGHT'S NEWS.

Little eddies of speculation have been noticeable on the surface of markets to-day, but, as a rule, they were stagnant, with Americans inclined to recede, and only two or three Home Railway stocks really aggressive. Great Eastern was pushed up vigorously to 7 on an arrangement between the company and the Great Northern covering the South Yorkshire competitive traffic. A similar story was set afloat to help the upward movement in South-Eastern and Chatham lower stocks, but had little effect, and neither yarn prevented the market from closing below the best. Hudson's Bay shares have been flat upon the particulars of land sales quoted in another column, and there is much worse news than that to come from Canada; only a conspiracy of silence over there prevents the truth from leaking out. Can. Pac. shares have been again the centre of a very lively gamble and the price has been well maintained. De Beers shares, on the other hand, continue to be sold by the French investor, and were accordingly again flat. Other Mines, particularly Kaffirs, were also depressed and listless.

We hear to-night that the receiver appointed for the Chicago and Milwaukee Electric Railroad Company has been withdrawn, and that its agents here, the Dresdner Bank, are paying the coupons in full. Another story that comes along is the highly amusing one to the effect that an American railroad has sent over Clearing-house certificates for $1 each with which to pay its dividends. We cannot vouch for its truth.

Bank and Discount Companies' Dividends.

First to lead off amongst the banks with the dividend announcement was the London and Westminster. It is always prompt, and the announcement made by it on January 1st appears to have pleased the market although it is not so good as some people expected in view of the high rates for money prevailing towards the end of the year. The directors, however, pay 6 per cent. for the half-year, bringing the dividend up for the whole year to 13 per cent., or the same as a year ago, and transfer £10,000 to the pension fund, leaving £47,000 to carry forward. A year ago £50,000 was placed to reserve and £24,703 carried forward. Next day came the London City and Midland Bank, with a dividend at the rate of 18 per cent. per annum, and its profits of £519,913 for the half-year were sufficient to enable its board to devote £40,000 to writing down investments, £20,000 to bank premises, and £5,000 to officers' pensions fund, leaving £172,057 to carry forward against £171,500 brought in. A year ago bank premises also got £20,000, and £5,000 was handed to the pension fund. The figures for the second half-year, therefore, show a decided improvement. The London and South-Western Bank board is also able to declare a dividend at the rate of 16 per cent. per annum, to apply £10,000 in reduction of premises account, and to carry forward £40,000 against £62,191 brought in. This is after the authorised contribution of £3,000 has been, as usual, set aside to the staff retirement fund, also after depreciation of investments has been fully provided for. No doubt the London and Westminster has also taken care of the same depreciation, but it is a pity all banks do not frankly conform to the general method of dealing with this difficult section of their accounts.

Amongst country banks, the Lancashire and Yorkshire is out with its announcement of a 16s. per share dividend for the half-year, making 15½ per cent. for 1907. The directors appropriate £15,000 to writing down investments, add £10,000 to the reserve fund

and have still £12,746 to carry forward. Profits for the year show an increase of £3,068.

Both the great London discount companies have done well in the past half-year, which is more, we fear, than can be said of some of their smaller competitors. The National Discount Company maintains its 10 per cent. per annum rate of dividend, and carries forward £15,000 as against £10,700 a year back. It has no doubt also made provision for rebate on a very liberal scale. This has likewise without doubt been the policy of the Union Discount Company, which announced on Thursday its usual dividend at the rate of 11 per cent. per annum, with £61,348 left to carry forward after placing £15,000 to reserve, raising it to £480,000. A year ago only £10,000 was added to the reserve and £54,193 carried forward, so that the exhibit is most creditable.

Paulo 1st Mort. ½, to 91½-93½. **Fall:** L. G. O. Ordy. 8, to 36-41. do. Pref. ½, to 4¼-5¼, do. Debs. 3, to 76-80, London Road Car Prefce. 1, to 6-8.

WATERWORKS.—Rise: Monte Video shares ½, to 23-24.

The Week in Mines.

This has been another broken week on the Stock Exchange. On Wednesday the House was closed, as usual on New Year's day, and neither the day before nor the day after did business become at all brisk, so far as the mining sections were concerned. Dealing, indeed, was on the smallest scale, and since the Stock Exchange is credited with an inability to run more than one boom at a time, mines will have to wait at least until the flutter in the Home Railway market is over. The public is taking not the slightest interest in the Kaffir Circus, and considering this complete absence of outside support, the market keeps up wonderfully well. Fluctuations are naturally small, but if the public is not buying it does not appear to be selling, and a very little shop influence suffices to maintain values, and sometimes to advance them a little. This is the more noteworthy because the Continent threw over a few shares, probably connected with the Paris settlement, and all Continental Exchanges, like our own, were closed on January 1, so that foreign markets played no part in producing the firm tendency. Bears, no doubt, gave a little assistance, the optimism prevailing all round the House as to the New Year prospects rendering it somewhat indiscreet to have anything much in the way of a short interest open, more especially as in many cases prices are at the lowest point ever touched. The little buying that took place during the week was more particularly directed to shares of the so-called investment class—like Knights and one or two others, and House "tips" to purchase things like City Deeps and Durban Deeps only provoked a smile.

What pleases the market most is the apparent ability of the gold section to keep clear of the diamond morass. While Gold shares have behaved quite respectably, Diamond shares, or some of them, have sunk further into the depths. Premiers in particular have fallen away, and it looks as though a group or groups are obliged to throw over anything saleable no matter what the sacrifice, so severely strained have their finances become. That Diamond Buying Syndicate may have a lot to answer for yet. Much of the selling was attributed to the Cape; but whatever the nominal source, there is hardly the smallest doubt that the sales originated in London. Premier deferred were down to 5⅞ at one time, and a considerable effort was necessary to get them over 6 again. The market looks a bad one. De Beers also had a sharp drop to 14½ on Continental realisations, but local bears took the shares offered, and later fluctuations were between 14⅝ and 14⅞. Jagers recovered a portion of the 5s. dividend deducted on pay day—the settlement, by the way, went through with perfect ease—and New Vaals, Lace Diamonds, and Voorspoeds all gained a little, the last-named deriving benefit from the official report on the mine mentioned elsewhere. Roberts Victor improved a trifle, but fell back again.

Several things in the Land and Finance section went up, including leading counters like Central Minings, Gold Trusts, and Johnnies, but Welgedachts continue to fall, and are now down to £1. After the slump at the end of last week Tanganyikas picked up a trifle, and rallied from 2⅛ to 2 1/16, but the ups and downs are entirely due to professional impulses, and it is long since the public took any active interest in the shares, although many must be stuck with them at high prices. The Banket things were inclined to pick up, and Chartered were actually ⅞ bid, still a wonderful price when you come to consider all the circumstances.

The improvement in Broken Hills has, unfortunately, been followed by another sharp tumble, although the metals, apart from zinc, did not perform badly. There appeared to be some forced closing in connection with a local account, and when this was finished a slight pick up ensued, but not sufficient to wipe out all the loss. Very little activity was shown by West Australians. Horseshoes were sold in a small way from the Continent, and Kalgurlis added a trifle, but Great Fingalls could not maintain a slight rally, and Sons of Gwalia eased off.

Copper shares were a pretty good market, take them altogether. The metal was higher, and although Rio Tintos dropped a little at first, they subsequently went up at a good pace. Anacondas were tolerably steady while waiting for the dividend, the market's estimate of which was nothing to 75 cents, while the actual declaration was 50 cents, a drop of 75 cents compared with the previous distribution. Capes, Elliotts, and Great Cobars all added something, and Mount Lyells went ahead in good style on news from the other side of important strikes on the 1,000 foot level of the North Mount Lyell mine. It is stated that the directors of the Arizona Copper Company have authorised improvements of the plant estimated to cost about £22,000. This has been done under the advice of Mr. Robert Addie, who has recently reported on the mines, and has now been appointed the company's consulting engineer. The improvements are expected to increase the smelting power of the furnaces, and materially reduce the cost of production.

In the Miscellaneous sections Waihi Grand Junctions went off on the poor report, but other New Zealands remained steady. Most of the American things went up, including Alaska Treadwells, Mexicans and Uniteds, and El Oros, Tomboys and Le Roi No. 2. Nothing happened among Siberians or Indians, but the tendency was pretty good.

MINING NEWS.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Nourse Mines.—In the twelve months ended July 31 the quantity of ore treated was 360,150 tons, an increase of almost 100,000 tons compared with the preceding year. Yield in fine ozs. was 152,217 against 114,681, and value per ton comes out a trifle lower at 8.453 dwts. Value of the output was £637,636 or £1 15s. 4.913d. per ton, and while the average was a trifle lower than in the preceding period, the working expenditure of £431,084 was only £1 3s. 11.269d. against £1 5s. 5.351d., and the profit of £206,552 is almost 2d. per ton greater at 11s. 5.644d. After making sundry adjustments on account of interest, &c., the nett credit is £208,921, and there was the large sum of £69,627 brought forward, making £278,549 in all. Additions to share interests were made to the extent of £9,634, and this, together with capital outlay of £38,787, is provided from profits. Transvaal Government taxes took a further amount of £19,935, and two dividends of 12½ per cent. each, paid in January and July respectively, absorbed a sum of £168,750, leaving £41,426 to come into the current year. Ore developed during the year was 384,408 tons, the average value of which was estimated at 7.2 dwts. and the reserves at the end of the year were 1,116,051 tons averaging 8.3 dwts., an increase of 94,167 tons, but the value is 0.4 dwts. lower. These figures are accounted for partly by a lower limit of payability used in calculating the ore reserve and partly by the inclusion of certain reef areas previously considered of doubtful value, but which now have proved payable. In addition to this tonnage there are developed 934,269 tons of an average value of 3.7 dwts. representing the accumulation of low-grade ore developed in the mine since the commencement of operations. The company lost 600 of its Chinese labourers last month and about 1,400 will be repatriated in the current year, leaving 400, whose contracts do not expire until September and October, 1909, and January, 1910. Every effort will, of course, be made to replace the Chinese by native labourers. No change has taken place in the shareholdings during the year and calls amounting to 3s. 3d. per share were paid on the shares held in the Wolhuter Deep.

Glen Deep.—Revenue from gold recovered during the twelve months ended July 31 was £362,825, being £1 11s 3.316d. per ton milled, the quantity dealt with having been 232,012 tons compared with 192,360 in the preceding year. The yield of metal was 86,298 ozs., and the working expenditure came to £243,541 or £1 0s. 11.926d. per ton, a considerable reduction against the preceding year, and the profit per ton comes out at 10s. 3.390d. against 9s. 5.615d. Nett income, including a little from interest, was £120,322, and as £21,978 was brought forward, the disposable balance is £142,300. Capital expenditure, &c., was £20,633, and Government taxes £10,985, and after paying two dividends of 7½ per cent., each making 15 per cent. for the year, there remains £20,681 to be carried forward. Quantity of ore developed was 303,892 tons averaging 6.4 dwts., the total being considerably in excess of the tonnage treated during the twelve months, and increasing the ore reserves to 437,553 tons, worth 7.3 dwts. Beyond this there are 377,894 tons, assaying

33 dwts., a portion of which may later on be profitably mined as working conditions improve, but it must be pointed out that the reef formation on the lower workings of the mine has continued in the disturbed zone previously noted. The grade of ore disclosed in these workings has improved slightly during the year, but there is continued cause for uncertainty regarding the general outlook of the mine, although not affecting the immediate future. In the case of this company, 1,540 Chinese left in September and October last, leaving 300 in the company's employ, who remain until January, 1910. Apart from the reorganisation of the labour force, which the repatriation involves, the prospects of the current year are considered favourable.

LANGLAAGTE DEEP.—The extension of this company's plant from 120 stamps to 200 has now been completed, and the full number has been in operation since the early part of the current year. Ore milled in the twelve months to July 31 was 329,495 tons, an increase over the previous year of 88,834 tons, and the output of gold was 116,361 ozs. against 84,150 ozs., the yield per ton being a trifle higher at 7.062 dwts. due to improved extraction. Value of the output was £489,672 or £1 9s. 8.670d. per ton, and the expenditure came to £378,987 or just over £1 3s. per ton, leaving the working profit at £110,685, giving an average per ton of 6s. 8.621d. This means that the proposition is a low-grade ore which can only be made to do well by treating on a large scale. After providing for interest the balance of profit is £109,620, and from it the directors apply £79,208 to capital expenditure, being £37,193 on account of new works and £42,015 for reduction of liabilities for loans, &c. Additional share subscriptions took £750. Transvaal and French fiscal taxes were £9,140, and £20,522 remained to be carried forward. Ore developed in the twelve months was 367,440 tons, making the total reserves 827,728 tons valued at 6.6 dwts. per ton. This leaves out of account 534,612 tons worth 3.8 dwts., a portion of which will probably later on pay for treatment as working costs become cheaper. The outlook is considered good, taking into account the satisfactory ore reserves and larger stamping power.

MONTROSE GOLD MINING AND EXPLORATION.—This can hardly be numbered among the important South African mining enterprises, but the ambition of the general manager is to make it one of the leading financial houses in the City of Johannesburg. That is a tidy job, and if he can succeed everyone will be glad, but shareholders will not mind if it is only in the second rank provided they are not asked to provide any more money, and dividends commence soon. It cannot be said that the manager takes a wildly optimistic view of the immediate future, and in one of his reports, dated July 1, 1907, we encounter such phrases as "I regret that I cannot at present foresee the lifting of the cloud of depression; rather am I inclined to believe that we will see a still greater depression before a revival." Again, "Not only investors in mining stocks, but merchants, tradesmen, and all others are suffering severely, and are far from seeing their troubles behind them." This is not very cheering, but things will come all right in time, only we shall have to wait. Last year's accounts, made up to June 30, show a depreciation on investments of £24,492; but what else could be expected in such a year? A further sum of £1,586 was written off mining, development, exploring, and prospecting accounts, and the total deficiency is brought out at £26,043, making a total to date of £29,707, or, roughly, one-third of the capital. Investments have been valued at middle prices on the date of the accounts, but the auditors have wisely recommended the creation of a reserve in cases where the valuation exceeds cost, and we find in the balance-sheet that provision to the amount of £7,021 has been made. The freehold land in the Transvaal and Rhodesia has again been taken at cost, including all prospecting expenditure, and at this figure stands at less than 2s. per acre.

VOORSPOED DIAMOND MINING.—It is useful and interesting to note that the official report of the Mines Department of the Orange River Colony speaks in very encouraging terms of the prospects of this mine. The fact that the statement is official should ensure its impartiality, and, so far as one can see, all points, good and bad, have been properly emphasised. Although it was found that the mine did not extend so far into the farm Belmont as had been expected, there seems to be no question that it is the largest in the Orange River Colony. With a very inefficient old plant the mine appears to have been a steady producer, the output being about 21 carats to the 100 loads. The plant has also proved useful for experimental prospecting, as the mine presents one or two new features that would, unless guarded against, cause trouble to the washing plant. It seems that the yellow ground contains patches too hard to wash without some grinding, and on this material experiments have been made, with the result that grinding pans similar to those in use in brickworks have been adopted with great success. It is said that the result of the experiments go to prove that grinding pans might be of considerable service in mines washing blue from the floors. So far as the Voorspoed is concerned the outcome is the designing of a complete crushing and washing plant capable of treating 4,000 loads per 12 hour day, the erection to be commenced at once. The necessary steps are being taken to ensure a sufficient supply of water, and it is expected that in about twelve months from date the mine will be putting through at least 160,000 loads per month, yielding 33,600 carats. "On the whole, the mine has every prospect of being a certain profit-earner, and a large factor in the future of the district," concludes this official report, and we are sure we hope so.

CHICAGO-GAIKA DEVELOPMENT.—This company's original claim holdings numbered 377, but 280 have been abandoned and 20 have never been found, leaving the company with 77. Negotiations with regard to these 20 are proceeding with the vendor company, which will probably report that after the expiration with the 280 claims the company is practically ready to [illegible] not being able to find the 20. As to the 77 the less said about them the better, but they must be protected as new [illegible] reports made of their probable extension worth. Yes, if you are not a shareholder. But the business of the African Option Syndicate is going on all right, and the work on the Sonabula Diamond Fields has been [illegible] the year with excellent results, but not immediately without dividends. Crushing on the Gaika mine has been [illegible] without interruption, and it is quite startling to find that shares in subsidiary and other companies costing £[illegible] are worth as much as £57,063 on December 31, 1907, the date of the report. General expenditure in the year was £[illegible] against a revenue of £1,260, meaning a deficiency of £[illegible] and standing £14,750 to date. Cash balance is £[illegible] and we await how the current year's directors' fees have been [illegible]

BOSTON CONSOLIDATED COPPER AND GOLD.—Anything Yankee is always on a big scale, including financial [illegible] but it is probably no idle boast of the president of this vast undertaking that the workable and payable ores now contained in the company's mines will feed the mill at its full capacity of 1,080,000 tons per annum for 50 years. This means 58 million tons, and the figure is said to be a conservative one. "In possession of one of the largest copper properties in the world," says the president of the company, respectfully, "substantial results are limited only by the capacity provided for the treatment of the ores." The company is in a position to mine double the amount now required by the mill; it has nearly finished its improvement expenditure, and, while facing at the moment a depressed and unsettled copper market, there is no hesitation in saying that the mines can and will earn substantial profits even at the present market price of copper. Of course, the financial crisis in the States caused the company some embarrassment, and copper not being readily saleable, a little while ago the company was obliged to raise some fresh capital. It accordingly offered £252,000 7 per cent. first debentures, convertible into shares at £3 per share, the capital being increased from £625,000 to £725,000 by the creation of 100,000 shares of £1 each. The accounts of the American company show clearly that the money was badly wanted failing the immediate realisation of stocks valued at $810,368 as total floating liabilities under all heads reached the enormous sum of $1,905,927, quite apart from the advances of $1,397,606 from the English concern. On the other hand, sundry debtors are a mere $109,827 and cash is slender enough at $80,583. The fact that the total capital outlay is $4,009,275, including $2,182,067 spent last year, against a share capital of $1,000,000 only, shows how severely the position must have been strained. Just take note of the profit and loss account. The company apparently produced metals to the value of $1,253,397, but only $443,029 were sold, and the total expenditure was $920,826. Balance of profit is brought out at $335,238, but clearly subject to the realisation of the products. Interest took $48,556 and $17,195 was written off the expenses in connection with the loan from the English company, reducing the item to $51,585 and leaving the balance of profit at $269,487. This is added to the credit of $495,712 brought in, making $765,199 in all. The English company's balance-sheet is of less consequence, but one or two items might be mentioned. All but 15 of the shares in the American company are held at a cost of £445,000, and advances to the latter appear at £286,903. Administration outlay to date is £15,208, and the cash balance £1,169. At the date of the accounts £114,230 of debentures had been converted into 57,115 fully-paid shares, leaving £135,770 outstanding, and since all remaining debentures of the 1905 issue have been converted. The conversions being at a premium have led to the creation of a premium account standing at £57,115 on September 30. The American directors are said to be anxious to meet the shareholders, and, to permit their attendance, the annual meeting instead of being held last month will take place on the 28th inst.

LAKE COPPER PROPRIETARY.—This is a Swedish company incorporated early in 1906, and accounts are now submitted for a period from March 19, 1906, to June 30 last. The mines have not yet commenced to produce copper, but the shares have led to excitement on the Stock Exchange, and this is never a good sign. However, we must hope for the best, and the directors, at any rate, seem confident. Efforts have been directed to fully proving, developing and opening up the Stora Strand Mines, and the directors are glad to say that these efforts have been very successful. Since the statutory meeting in July, 1906, 60 additional leases have been acquired, making 140 in all. The lode has been prospected and proved for a continuous length of 10 English miles and by a borehole to a depth of 870 ft. and developed by 13 shafts and three levels extending over 5,400 ft. This development is said to have proved the uniform character of the formation of the ore, and assays made at every five feet give the average copper contents at 2 per cent. approximately. The ore in addition contains silver and gold exceeding 5s. per ton, or sufficient to pay for the raising of the material. Up to date outlay on development, equipment, [illegible] has been £55,000 and elaborate trials of various [illegible] have been made. The directors think they have [illegible] will give very satisfactory results, and the cost of smelting has been put at 6s. per ton by a practical expert who has studied local conditions. The Stora Strand mines are said to [illegible] of a practically unlimited output, which will give a profit even if the price of copper should fall further [illegible] the plant for the treatment of the Stora Strand ore has been

erected the directors will immediately proceed with the further development of the Vingnäs mine. The balance-sheet shows investments at cost, £200,000 being the shares held in the Swedish company nominally possessing the property and sundry loans and interest, presumably advances to the Swedish concern.

Waihi Grand Junction Gold Company.—There can be no question at all that the belated report of this New Zealand company, covering the twelve months to December 31, 1906, is extremely disappointing. Happily the general manager's report is brought up to a much later date than the accounts, so that shareholders have an opportunity of forming some idea of the present position. Possibly the company may have suffered in some degree from a change in management. It appears that in February, 1907, the chairman left England on a visit to the mine, and shortly after his arrival in April Mr. H. L. Simmons, the manager, resigned, owing to indifferent health, and was succeeded by Mr. F. C. Brown, who took charge from June 1. This gentleman's report, dated September 30, brings the record of work done up to September 30, and we also have the engineer's statement on the plant and machinery telling us that the company possesses one of the best-equipped and most up-to-date plants in Australasia, which will eventually enable the ore to be crushed and treated at a very low figure. It looks as though this will be very necessary. Development work has been on a fairly generous scale, and moderate values have been revealed, but it cannot be said that anything startling has come to light. Nothing very definite is said about the ore reserves, but the superintendent thinks that at the present increased rate of crushing there now exists about two years' mill supply. The mill was started on August 20, 1906, and at the present moment is running steadily, crushing about 150 tons per day. Certain modifications in the method of treatment have been introduced, and there is no question that every means is being taken to get the best possible extraction from the ore. During the three periods commencing June 17 and ending September 7 10,507 tons were dealt with, and the average cost at the mine, including mining, milling, treatment, mine development, salaries, and general expenditure, was 22s. 4d., which it is hoped to reduce to about 18s. on a tonnage basis of 175 to 200 tons per day. In the period covered by the accounts the total outgo was £40,809, including £9,950 for depreciation of plant, machinery, and buildings, against an income reaching £13,109 only, so that there was a deficiency to be carried forward of £27,700. This added to the sum already standing for mine development and general expenditure makes a total of £135,931, a large part of which ought to be written off before dividends commence. Liquid resources are very poor, and loans with interest are no less than £61,281, the repayment of which from profits will automatically reduce the big figure just mentioned.

Westralia and East Extension Mines.—The directors of this company have plenty of reasons to advance for the poor success attending the operations in the year to September 30, and when shareholders have read all they will doubtless come to the conclusion that the Fates are against them. Just after the last report was issued, indicating a very unsatisfactory position and outlook, the prospects seemed to brighten, thanks to a marked improvement in the value of the Westralia Extended reef at several points where it was being opened up in the deeper developments to the south of the No. 22 shaft. But the stuff got from other places was so miserably poor that the better ore mentioned did not suffice to even maintain values, let alone lead to actual gain, and the year's operations turned out badly. To make matters worse, a cloud burst, or something of the sort flooded the mine, rendering many of the lower workings inaccessible. This, together with a lack of cash, led to considerable restriction of development work, and delayed the opening up of the more valuable ground lately discovered. Hence the disappointing results exhibited by the accounts now submitted. Prospects, however, now appear a little brighter, and during the last two months there has been a decided improvement in the grade of ore sent to the mill, sufficiently so, in fact, to leave good margin of profit. There are also indications that justify the hope that good ore reserves will be opened up in the deeper ground from the No. 22 shaft, where active development work is now being carried on. Indications are likewise favourable as regards more settled and gold-bearing ground being met with by extending the deeper levels to the south, which if proved to be the case would considerably enhance the value of this section of the mine. Revenue in the year to September 30 was £43,454, but the total outgo, including depreciation allowance, was £48,376, so that a loss on working of £4,922 resulted. In addition the company had to provide interest on debenture stock £1,894, administration and other expenses £665, directors' fees, pretty stiff at £970, and loss on sale of Transvaal stock £149, so that the aggregate deficiency is £8,599. Deducting from this the credit of £3,838 brought in there is a deficit remaining of £4,761.

Golden Pike and Lake View East Mines.—This company's annual report made up to September 30 last contains little or nothing of an encouraging nature. The leases have been held on the half wages, half tribute system, and tributors appear to have done a little work, but the directors tell us it is yet too early to recommend the resumption of active development on the Golden Pike lease, and the present policy of holding the leases will be continued. The only words of hope the directors trust themselves to express are to the effect that the satisfactory way in which the lodes are opening up at depth as evidenced by the Great Boulder mine in which the main lode at the 2,050 ft. level has been proved for a length of 600 ft. gives great encouragement to the surrounding mines. As to the Lake View East lease we are told that the tributors have been working on a small chute of ore which is about 6 ins. in width and extends from the surface to the 100 ft. level with a strong northerly dip. A small amount of pay-ore was obtained, and work is still being continued at the 60 ft. and 100 ft. levels. This lease has not benefited during the year by any data obtained from adjacent mines. The balance-sheet is a simple affair. Excluding £850 for calls in arrear the paid-up share capital is £222,061. Mining leases are entered at £179,504, and expenditure during development has amounted to £40,866, a sum of £1,571 being laid out in the period under review. Cash still left is £3,624, so the company may be able to struggle on a little longer.

Oroya East (Hannan's) Gold Mine.—This is the latest West Australian "gold mining" company to commit the happy despatch. What a number of unfortunate companies Mr. W. P. Forbes is connected with? He is not the chairman of this one, but forms one of the directorate. The company has been adopting the not very heroic policy of waiting to see how the developments on a neighbouring property turned out, but this concern, the Brownhill Extended, has not extended its drives any nearer to the Oroya East boundary, and development operations have been stopped. In the circumstances the continued existence of the Oroya company can serve no useful purpose, except the payment of directors' fees, and as cash is getting short the company is to be wound up and its miserable existence put an end to. General expenditure to date is £26,931, including £1,477 spent last year, and it would be nice to know how much of this the directors have received for their remuneration and its relation to their share holdings. A sum of £1,965 is due to the vendors, and it hardly looks as though they will get paid. The vendors took most of the purchase price of the mining lease in shares, and the public losses are not so severe as sometimes happens.

Broken Hill Junction Mining Company.—For the first time in the history of the present company the operations have resulted in a profit which may or may not be repeated now that lead and other metals produced have shrunk so severely. Nett amount earned in the half-year to September 30 was £2,458, after making provision of £2,000 for possible deficiencies on concentrates paid for at the prices for lead and silver ruling at time of delivery, but subject to adjustment on the average prices for the third month later. Crude ore treated during the period was 31,396 tons, which contained 3,631 tons of lead and 277,264 ozs. of silver, which is nearly double the quantity dealt with in the previous half-year. The directors point out that the new tariff has imposed an additional heavy burden on the mining industry, and other matters that have already assumed a serious aspect for the company are the fall in the lead market, the probability of having to pay increased returning charges, and the difficulty of finding buyers for concentrates. These troubles tend to increase, we are told, and will have to be faced in the near future. On the other hand, the ore bodies at King's shaft, and at No. 9 level, near the north boundary, are developing well, and when arrangements have been completed to permit of hauling ore three shifts from Browne's shaft the output will be considerably increased. The general manager's report shows that the quantity of ore available and ready for stoping has been augmented by 70,000 tons, making the total 150,000, notwithstanding that 31,396 tons have been treated. The profit mentioned goes in reduction of the heavy debit brought forward, lowering it to £52,043.

Tasman and Crown Lyell Extended Mines.—The first report and balance-sheet for the half-year to September 30 states that prospecting has been carried on with hopeful results. Ore in sight is estimated at 13,842 tons copper and 13,550 tons galena. Development work has been done to the extent of 485 ft. Expenditure on revenue account amounts to £654, and on capital account to £872. Cash in hand is £227, and £9,167, or 11d. per share, is still uncalled on 200,000 contributing shares.

Australian Smelting Corporation.—The misfortunes of this undertaking (the old Smelting and Refining Company of Australia) are enough to drive shareholders to despair. The first report of the new concern was issued only a few weeks ago, and although it was then clear that the company was in very straitened circumstances, any proposal so serious as that now suggested could hardly have come before shareholders' minds. All the trouble apparently arises from the refusal of certain shareholders to pay up their calls. Legal proceedings for enforcing payment have been taken, but this means long delays, and the company finds itself in immediate need of further capital. In the last report it was stated that the directors hoped to lay proposals on this question before the shareholders, and it appears that negotiations have been proceeding in Australia with some of the large ore producers with a view to the provision of funds by means of the subscription at par of 7 per cent. preference shares, but the recent fall in the price of metals has seriously affected these negotiations, and it is now considered unlikely that anything satisfactory can result. A debenture issue is out of the question, and there is nothing for it but reconstruction with a five shilling in the £ assessment. This is a nice sort of New Year's gift, and the price of the shares, 0-1s., tells its own story. If the shareholders agree to provide the further funds necessary the directors think the debenture holders might be induced to make some concessions, and a meeting was held on Thursday to consider the matter, but the debenture holders are clearly disinclined to give much away.

Cobalt Town Site Silver Mining Company of Canada.—We have heard a lot about Cobalt during the last year or so, and have no doubt that had times been more propitious the number of company flotations would have been very greatly increased.

This one saw the light on October 11, 1906, and was formed to acquire all the issued share capital, less directors' qualification shares—namely, 45,000 shares of $1 each—in the Cobalt Town Site Mining Company. This is the Canadian company, and owns a mining property situated in the centre of the Cobalt district on a 999 years' lease from May, 1906. The mine is bounded by several dividend-paying properties, and the superintendent remarks that to put this company's mine on a steady shipping basis it will be necessary to sink No. 1 shaft an additional 50 ft. and drift from it 220 ft., and to sink No. 2 shaft an extra 50 ft. and drift from it 400 ft. The general strike of miners retarded operations from the beginning of July to November 1, 1907, but the trouble is now at an end, and no further labour difficulties are looked for. Total ore shipments to date have been 245,128 lbs. dry weight, which includes assorted ores on hand, and the silver contents came to 46,010 ozs. Owing to the fall in the price of silver, and to the fact that the smelting of Cobalt ores is practically in the hands of two American companies, a great deal of trouble and expense has been experienced in placing the output of the mines. These Yankees have lately demanded contracts for lengthy periods, which it is deemed inadvisable to accept, as Canadian smelters are being erected, and with this additional competition the mines should obtain better terms in the future. Moreover, negotiations are being entered into with smelting companies in England, and if fair terms can be arranged the present smelting difficulties may remedy themselves. As to the concentrating ore, the Canadian company has entered into an agreement on a percentage basis with the Muggley Concentrates, Limited, who are erecting a plant on the property, and will concentrate the low-grade ores on the dump. On November 30 these were estimated at 2,482 tons, with silver contents of 49,640 ozs. The balance-sheet of the English company shows that the 45,000 $1 shares in the Canadian concern cost £180,000—that is, £4 for each 4s. share—and as the price of the English company's shares was at one time at a big premium, the difference between actual and market values became enormous. There is a debit to profit and loss of £1,888, and the report tells us that the amount appearing to the credit (this should be debit) of the Canadian company's balance-sheet—namely, $20,345—is not properly shown, as a portion of the amount should be charged against development, and not profit and loss. The Canadian auditors have been requested to go into the matter again.

EAGLEHAWK CONSOLIDATED GOLD MINING CO., LIMITED.—The half-yearly report, unaccompanied by statement of accounts, for the period to September 30, states that 6,939 tons of stone have been treated for a total yield of 2,703 ozs. of gold, including returns from slimes and sands cyanided, showing a falling off of 490 ozs., despite an increase of 841 tons treated as compared with the corresponding period last year, and also a decrease of 199 ozs. as compared with last half-year. No dividend is to be paid, and funds are being carefully husbanded. A hope of satisfactory developments is expressed.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

BANK OF NEW SOUTH WALES.

Profits of this bank for the half-year ended September 30, after making the usual provision for bad and doubtful debts, fluctuations in the value of investment securities, &c., showed a substantial improvement of £13,494 at £151,810. Adding £29,314 or £6,697 more brought in, the disposable total was £181,125 compared with £160,934 a year ago, of which rebate on bills took £8,844. Payments on account of the 25,000 new £20 shares on July 1 amounted to £425,400, on which a three months' dividend has to be provided, but in spite of this additional charge the directors are able not only to maintain the dividend at the old rate of 10 per cent. per annum, but to transfer an extra £5,000 at £30,000 to reserve, and still have £3,914 more at £31,646 to carry forward. The reserve fund will now stand at £1,530,000 against a paid-up capital of £2,425,400. Liabilities on deposits are £1,244,281 larger at £26,056,302, but the chairman in his speech at the meeting in Sydney on November 26 stated that there were indications that spare money is being more freely used for investments than has been the case for some years past, and this, we take it, is a hint that such large increases in deposits can hardly be expected in future. Note circulation is £22,796 up at £982,704, an increase which is said to be nominal only, but bills payable and other liabilities are £99,508 down at £3,254,518. On the other hand, coin, bullion and cash balances have risen by £1,592,091 to £6,869,020, but money at short call in London has been reduced by £855,000 to £2,106,090 owing to the policy adopted by the directors of keeping their principal coin strength in the country where their principal business lies. Bills receivable and remittances in transit are £222,009 down at £2,106,090 as the result of diminished gold shipments, but investments in British and Colonial Government securities are £532,282 higher at £2,344,273, and altogether the "cash assets" come to £13,398,412 or £1,082,126 more. Bills discounted and loans and advances to customers are £606,033 up at £20,311,637.

CRYSTAL PALACE COMPANY.

The accounts now issued by this company cover the period from July 1, 1905, to December 31, 1906, and the eighteen months are irregularly divided up, owing to the fact that the reconstruction authorised by Parliament was carried out as from May 31, 1906. Thus the show is a little blurred, but there is one encouraging fact connected therewith, the last profits on credit balances have risen steadily since the beginning of June, 1906. For the last six months of 1905 the credit balance was only £2,934. In the next five months it was only £971, but it rose in the last seven months of 1906 to £6,250, and the directors say that the business of the past year has been better still. This is good news as far as it goes, but the shareholders will never get back the money they have lost. Under the reconstruction scheme the share capital has been written down, until now the preference and ordinary shares outstanding amount to only £94,712 nominal, and the company wants more money, which it has found great difficulty in obtaining. A projected issue of new capital in the form of 7 per cent. preference shares was duly arranged for and underwritten to the amount of £[illegible] as authorised by Act of Parliament, but the underwriters seem to have been unable or unwilling to fulfil their contract, and as a result a compromise has been arrived at, by means of which the sale of the water tank to the Metropolitan Water Board and certain other arrangements have been carried through whereby the financial position of the company has been materially improved, as will be shown by the accounts of the past year, which, we trust, will not be so long making their appearance. Much is expected from the electric tram service which now comes up from Croydon and Penge to the Palace, and from various other hopeful circumstances which may improve its position in the near future. There is certainly great room for improvement. Meanwhile the directors are arranging to have a Mexican Exhibition at the Palace this year.

EGYPTIAN SALT AND SODA COMPANY.

The seventh annual report of this company is before us and as it is an English company we venture to express regret that the figures in it and in the balance-sheet have not been converted into English money. All the statements are in pounds Egyptian. There is no particular mystery in this, but it would simplify the study of the accounts if the money were converted. Taking it as it stands, the business for the year ended August 31 last seems to have been fairly remunerative. Profit is brought out at £E25,335, out of which 6 per cent. was distributed on the original share capital. Then holders of the unconverted remainder of the deferred shares get 5 per cent. or £E389. The balance of £E7,396 remaining is then added to £E34,535 brought forward, so that £E41,931 remains for further distribution, and out of this the whole of the ordinary shareholders, new as well as old, receive 6 per cent. out of a free balance of £E39,870 all told. Of the 6 per cent., 2 per cent. remains to be distributed this month. The directors state that they have arranged matters with the Port Said Salt Association and that a new company, the United Egyptian Salt, Limited, has been formed whose shares are divided between the Salt and Soda Company, which gets 7 per cent. and the Port Said, which gets 30 per cent. All seems smooth in the balance-sheet and a fair amount of depreciation is apparently allowed for throughout the various assets. The company had £E87,933 representing stocks on hand, and its investments are entered in the balance-sheet at £E32,492. A fair proportion of its first mortgage debentures has been redeemed, leaving only £E89,115 outstanding. Sundry creditors stand for £E12,666, and sundry debtors for £E59,934. The reserve account amounts to £E38,699, including the balance of the special reserve, which amounts to £E4,771 after £E11,404 has been written off concessions and as depreciation. The only thing in the profit and loss account that does not strike one as quite good finance is the inclusion amongst the earnings of the year of £E1,440, representing "appreciation of shares over cost." Surely it would have been better to have left that out. No exhibit is made of the general working expenses, but the general charges, directors' and trustees' fees, debenture interest, reserve for bad debts and compensation on cake-shipments are all duly set out.

THE FRIED. KRUPP COMPANY.

The world is much more familiar with the name of Krupp than with that of the great Phœnix Works, whose balance-sheet we noticed some weeks ago. None the less is the Phœnix the larger company, and also the company that pays the higher dividend, for the Krupp Company only distributed 10 per cent. for its year ended June 30 last. It, however, is a prosperous company, with a paid-up share capital of £9,000,000 and a loan debt of nearly £1,800,000. Its working profit for the year came to over £1,790,000, and including the small balance brought forward, the free revenue, after meeting taxes, insurance, and other charges, was £1,252,052. During the year £[illegible] was spent on capital account, but the resources of all kinds were ample, although the reserves did not seem to be heavy, and although about £54,000 is set down as cost of patents and licences. Sundry debtors stand at £2,430,643 and sundry creditors are owed £2,448,480. These figures indicate that a good deal of credit has to be utilised in the conduct of the business, and altogether the exhibit is not so strong as that of the Phœnix Company, although still fairly good.

PORT MADRYN (ARGENTINE) COMPANY.

Much has been heard of this company in recent months, and we looked at its report for the year ended June 30 last with some interest. It hardly appears to be so refreshing as we were led to believe, although progress has undoubtedly been made with water-boring and other improvements, but the company wants more capital and proposes to increase it by 110,000 additional £1 shares. A resolution to this effect has been submitted to the shareholders. The Central Railway of Chubut is a neigh-

bourly undertaking in which this Port Madryn Company has acquired 8,509 shares at a cost of £8,511. It is said to be progressing and the nett profit for the year ended June 30 was £5,165 or upwards of 6 per cent. on its issued capital. The board of the Port Madryn Company has taken the shares it bought into the balance-sheet at par and credited to the railway shares reserve account the difference between this and their cost price, which is finance. Much land is possessed by the Port Madryn Company, as well as the harbour that is to be and the land for the town, also a thing of the future, and will be that until water is brought from the Chubut River, a project in hand. It seems to have in all about 150 leagues of territory, and if that can be irrigated and business attracted to the port there may be a quite profitable future for the undertaking.

North Queensland Mortgage and Investment Company.

This small concern demands but a line or two here. It is doing better, the board and managers say, and last year had a free revenue of £1,828 after all charges had been met, out of which £500 is added to the reserve fund, which now amounts to £15,000. Of the outstanding 4½ per cent. debenture stock £10,260 has been brought back and cancelled, leaving the debt under this head at £108,141. The terminal debentures have been reduced to £6,910, or if a further payment of £1,250 made after the accounts were closed be taken into account, to £5,660.

Ingall, Parsons, Clive and Company.

By an unaccountable blunder, which we sincerely regret, last week's notice of this company's report made it appear as if its profits last year had dropped off by £6,667 compared with the previous year ended September 30. This was not the case, and the figure given in The Investors' Review was arrived at by comparing the gross profits of the earlier year with the nett of the company's past year—a blunder for which we can offer no excuse. As a matter of fact, the company did better last year than in 1906, the nett profits having risen to £3,767 as compared with £2,194, so that there was a recovery towards previous exhibits instead of retrogression. We hasten to acknowledge and correct the mistake, and to apologise for it.

Redpath, Brown and Co., Limited.

A considerable advance in the price of raw materials and keen competition prevented this company from making very much headway during the year ended October 31, and nett profits were £836 down at £28,583. The balance brought in, however, was £986 larger at £1,839, making the disposable total £30,422 or £150 more; but in view of the present conditions of the money market the directors have decided to transfer £4,500 to reserve. After making this provision £18,362 is distributed or placed to reserve in terms of the articles and £2,560 is carried forward, subject to directors' fees. Of the above-noted sum of £22,862 the 5 per cent. dividend on the preference shares takes £5,938 and £2,190 is put to the special reserve, and another £5,937 is absorbed by the ordinary dividend of 5 per cent. Then £859 goes to the preference shares, giving them another 1 per cent. or the same as a year ago; but only £85 is left for future distribution compared with £475, and the ordinary shares get £3,437, which is sufficient to bring the return up to 7½ per cent. or 2½ per cent. less. The £7,500 which appeared as goodwill in the last balance-sheet has now been written off out of reserve, leaving that fund, with the present addition, at £9,000. Land and buildings are valued at £104,078 or £1,922 more, and plant and tools have risen by £8,151 to £71,368, so that the reserve is none too generous a provision. Stocks, which are £5,177 higher at £123,534, seem very heavy for a company of this size, and sundry debtors are £14,207 up at £111,240, while shares in other companies stand at £12,139 or £1,444 more. Liabilities to sundry creditors have been reduced by £10,980 to £99,921, but the company owes £32,000 for money borrowed on security of its lands and buildings, and so far from having any cash in hand has an overdraft of £2,440 at its bankers.

Rolls-Royce, Limited.

A year ago this company offered 100,000 preferred ordinary shares of £1 each, of which 63,581 were allotted, and £31,594 had been paid up by October 31. The money thus provided has been used in the erection of works at Derby, but the equipment is not yet completed, and the directors state that in their opinion little benefit has been received from the new capital. Judging by results, this would seem to be the case, as nett profits for the twelve months amounted to no more than £5,390, whereas the prospectus estimate was for £59,635 from old and new works combined. So far, therefore, from the 25 per cent. dividend dangled as a bait for investors, the preferred ordinary shares get 6 per cent. on the amounts for the time being paid up, and after writing £1,000 off preliminary expenses £1,380 is carried forward. Property and goodwill account, less £2,292 for depreciation, is valued at £60,079, and stock-in-trade and work in progress appear at £32,292, and as the paid-up capital is £104,112 the company still has funds in hand. Sundry creditors, however, seem fairly heavy at £14,350, and exceed the sum to come in from sundry debtors and bills receivable by £6,061, so that the cash balance of £18,243 is none too large. Investments reach the magnificent total of £2 10s., and there is still £3,690 of preliminary expenses to be wiped out.

Sunderland District Electric Tramways, Limited.

This company was only established as recently as November, 1903, but it would appear to have been very badly managed at the outset, and has done nothing but pile up deficits throughout its brief career. For one thing it started to operate its line with a gas plant, an experiment which proved a disastrous failure, and caused the inhabitants of Sunderland to use any other mode of conveyance, or even their legs rather than trust themselves to the company's cars. Then working expenses, instead of being 60 per cent. of the receipts as calculated in the prospectus, have been well over 75 per cent., and altogether it is a melancholy exhibit. Traffic receipts for the year ended October 31 amounted to £23,487, and with advertising, royalties and miscellaneous receipts the total revenue was £25,097, of which working expenses took £18,153 and administration charges £1,008, and £1,361 was written off for adjustment of accounts with the Durham Collieries Electric Power Company and others. With regard to the last-named item, the chairman—who only joined the board in the spring, and is therefore in no way responsible—stated at the meeting that it referred to more or less imaginary claims, and it seems a pity that the loss cannot be thrown on to those who were responsible for their appearance in the accounts. Nett profits on working were £4,575 or about £1,100 more than for the previous 16 months, but debenture and other interest required £9,299, leaving a loss of £4,724 to be added to the debit balance of £7,632 brought in. This is not a pleasant record for three years' work, and the present board fully recognises that fact, but the difficulties in the way of obtaining anything from the promoters of the enterprise or from those who were responsible for the management in its early days are so great that they have decided to devote their energies to pulling the company out of its mess as soon as possible. Capital expenditure has practically been stopped for the time being, the outlay last year being no more than £746, while the contractors, &c., refunded £1,935, leaving the item of construction, &c., at £250,593. Purchase of provisional order and benefit of contracts, which represents promoters' profits, stands at £36,500, and expenditure in suspense comes to £52,812, so that there is a heavy burden to be shouldered. The directors, however, believe that the business is at bottom a good one, and they propose, amongst other things, to endeavour to increase their revenue by carrying goods, coal and heavy traffic. Partly for this purpose and partly to pay off liabilities they sought and obtained powers under certain restrictions to raise a sum not exceeding £20,000 by means of prior lien bonds having a currency of 10 years. Of these £5,000 are to be issued at once to pay off pressing liabilities, and the remainder will be used to provide additional equipment. In this way the directors hope that the company will be given a fair opportunity, and they suggest that when the receipts grow so as to show a surplus profit the capital should be readjusted, as otherwise a distribution of dividends would appear to be impracticable.

Benskin's Watford Brewery, Limited.

Notwithstanding the unseasonable summer, the gross profits for the year ended September 30 were a few hundred pounds larger at £104,210, and with £22,895 from rents, interest, &c., and £7,871 brought forward the total income amounted to £134,976. Unfortunately, however, working expenses were heavier owing to exceptional legal charges, a larger expenditure on repairs to licensed houses and the necessity for writing off an increased sum for bad debts, with the result that nett profits were somewhat lower at £69,685. After providing for debenture and other interest, dividend on first preference shares, half-year's dividend on "B" preference shares and compensation levy and writing £3,263 off leasehold properties the surplus remaining was only £8,730, and the directors regret that this is not sufficient to pay the dividend on the "B" preference shares. The six months' distribution on these above-mentioned was for the period ended September 30, 1906, so that there is a full year's dividend now in arrears, and we doubt very much if the first preference shares should have received anything. Breweries, licensed houses, goodwill, &c., less the allowance for depreciation, stand at £1,441,563 and against this huge total all that the company can show in the way of a reserve fund is £6,000, which is apparently represented by an investment of £5,844 in Consols and other investments of £913, whether taken at cost or market value we do not know. On plant and machinery and on casks the provision for depreciation seems to have been about 7½ per cent., reducing these items to £36,962 and £25,330 respectively, while in the case of horses, vans, advertising matter, &c., rather more than 15 per cent. has been written off leaving the book value at £26,045. The company owes £11,833 on loans and deposits and £32,477 to trade creditors, but, on the other hand, it has £37,459 due from debtors, £18,254 representing balance of premiums account, on which loans have been advanced to publicans and others, and £34,473 in cash. Stocks are extremely moderate at £38,198.

Birkenhead Brewery, Limited.

Nett profits for the forty-second year amount to £30,567, and with £2,270 brought in £32,837 remains to credit of profit and loss. Government compensation tax requires £1 890, £5,000 is transferred to reserve and £4,000 to renewal funds. A dividend of 10 per cent. is declared and a bonus of 2 per cent., making with 5 per cent. paid in June a total distribution of 17 per cent., less income-tax, being at the same rate as last year, and £3,654 is carried forward Freehold and leasehold property, plant and stocks in hand are valued at £352,273. Trade debts at £21,565 are £15,549 in excess of creditors. Cash is ample at £21,400. Share capital partly paid in excess of calls is £144,905, and mortgages £21,667 and debentures £133,592 are itemised with trade debts, &c., making total liabilities £161,670. Reserve fund with this year's contribution totals £68,551 and renewal fund £3,545, an aggregate of £72,096, which is all in the business. With the exception of this and a meagreness of detailed information the balance-sheet is exemplary.

INDIANAPOLIS BREWERIES, LIMITED.

A further modest increase of 2,101 barrels in the sales for the twelve months ended October 13 brought no consolation to the preference shareholders in its train. Trading profits rose by £964 to £117,513, but this trifling gain was much more than dissipated by the growth of the expenditure. General expenses took an extra £2,373 at £61,636, and the allowance for repairs and depreciation was raised by £3,510 to £31,278, while the directors have found it necessary to write off £10,881 or £3,412 more than last year for bad debts. Of the surplus remaining interest on mortgages again required £9,639, so that the nett profit was only £4,077 against £12,585. A larger balance of £31,132, however, was brought forward, giving a total of £35,209 compared with £34,740, but once more the American concern limits its dividend to £3,608 and carries £35,209 forward. The English company for its part can only show £32 from interest and transfer fees, making its revenue £3,640, of which nearly one-third goes to the directors, whose fees amount to £1,102, out of total London office charges of £1,940. Income-tax, although £188 down to £1,008, still seems out of all proportion to the profits earned. In the final result £692 or £225 more is added to the balance brought in, making £5,338. The preference dividend is now three years in arrear, and as only 52 per cent. of the shareholders agreed to the directors' proposal to issue second debentures in lieu of cash for the payment of these arrears, they now make an urgent appeal to the other 48 per cent. to assent.

BARTHOLOMAY BREWING CO. (OF ROCHESTER), LIMITED.

Sales of beer during the year ended September 30 showed a further large increase of 30,285 barrels, and trading profits of the American undertaking consequently rose by £13,803 to £102,898. After providing for depreciation and management expenses, the nett surplus, including £2,036 brought forward, were £5,506 up at £25,612, out of which dividends are paid absorbing £23,563 or £5,493 more. Adding the receipts from interest and transfer fees, the revenue of the English company is brought up to £23,793 compared with £18,258, of which London office charges, &c., took £1,446. Out of the remaining £22,346 the directors pay a dividend of 12s. or 6 per cent. on the preference shares against 4½ per cent. for the previous year and carry forward £1,946 or £26 more than they brought in.

DORTMUND BREWERIES COMPANY.

Profits for the year to September 30 last were £13,218 against £11,921 a year ago, and £2,121 was brought forward, making £15,339 in all available. Interest on debentures and consolidated mortgage bonds took away £6,705 of this, but out of the balance the full 6 per cent. dividend has been declared on the preference shares, and enough remains to give 3 per cent. on the funding certificates, together with a dividend of 1½ per cent. on the assenting ordinary shares, the one payment taking £675 and the other £951. All these distributions made, £2,508 remains to be carried forward. Complaint is still made that taxation has hurt profits, the malt duty and import duty on materials having compelled the Dortmunder Ritter Brewery Company to raise its price. Accordingly 2,472 hectos less beer was sold last year than in the year before. Then, however, there was a gain of 3,123 hectos, so that the 83,173 hectos now shown does not seem to be so bad. No changes in the balance-sheet call for notice.

IDRIS AND CO.

Last year was a very bad one for this company, thanks to the cold summer. Its balance-sheet is made up to October 31 last, and covers the year then ended. A pitiful profit of £1,752 is shown after paying debenture interest, and is added to the balance of £2,401 brought forward, making the total held £4,153, out of which the directors recommend a dividend of 3 per cent. on the "A" preference shares, that having already been paid as an interim dividend, and the amount already paid on account of the "B" preference shares is to be carried forward against future dividends payable thereon. The board has also decided that future preference dividends will only be declared and paid once a year. We are sorry for this hitherto prosperous company, whose products have deservedly a high reputation, and trust the current year will show a much better result.

GOVERNMENT AND GENERAL INVESTMENT COMPANY.

A profit of £19,714 was made by this little company in its year ended November 30 last, including £2,204 brought forward. After meeting all expenses £11,517 remained, out of which the preferred stock gets its full dividend of 4 per cent. and the deferred the final dividend of £3 10s. per cent., making with the interim dividend of £2 10s. 6 per cent. for the year against 5½ per cent. A valuation of the investments made on November 30 shows that their value then exceeded the amount at which they stand in the books. A balance of £909, being profit on the sale of investments, has been added to the capital reserve, which now amounts to £7,704. Altogether the balance-sheet only amounts to £347,246.

S. W. ARNOLD AND SONS, LIMITED.

Profits on working for the year ending September 30 produced £14,489, and with £890 brought in £15,379 is available. Depreciation is allowed £1,084, and a special provision of £500 is made for estimated depreciation of a freehold property, £1,000 is to be added to reserve fund, and 8½ per cent. is paid on the ordinary shares against 9 per cent. last year, leaving £496 to go forward. Properties, plant, &c., stand at £170,302, with additions of £2,533 and deductions of £1,150 during the year. Goodwill is valued separately at £10,926, and plant and effects, &c., at £6,353. Debtors owe £17,453, after provision of £2,250 for doubtful debts, &c., against creditors £4,742. Stock-in-trade, £9,247. Investments, £4,016, represent reserve of £4,000, to which £1,000 is to be added from this year's working. The trustee for debenture holders holds £550 of the company's debenture stock and cash £500, together with interest £1,281. Cash is £7,328. The company has mortgaged part of its freehold properties for £10,850. Granted that depreciation allowed on property account be adequate, the position of the company seems to justify the satisfaction expressed by the director.

DIVIDENDS ANNOUNCED.

BANKS.

Bank of Madras.—At the rate of 10 per cent. per annum for past half-year, placing Rs.1,50,000 to reserve, and Rs.1,42,500 forward.

Lancashire and Yorkshire.—16s. per share for past half-year, making 15½ per cent., appropriating £20,000 to write down investments, £10,000 to reserve, and carrying forward £12,736.

London and South-Western.—At the rate of 16 per cent. per annum for half-year ended Dec. 31, appropriating £10,000 in reduction of premises account, and carrying £40,000 forward.

London and Westminster.—6½ per cent. for half-year ended Dec. 31, making 13 per cent. for the year, transferring £10,000 to pension fund, and carrying forward £47,000.

London City and Midland.—At the rate of 18 per cent. per annum, appropriating £40,000 to writing down investments, £20,000 to bank premises, £5,000 to officers' pension fund, and carrying forward £172,057.

London Joint Stock.—At the rate of 11 per cent. per annum, appropriating £5,000 in reduction of building account, £5,000 to credit of superannuation allowance fund, and carrying £26,950 forward.

National of Mexico.—$6 per share, representing 6 per cent. for 1907.

Williams Deacon's.—For half-year ended 31st Dec. at the rate of 15 per cent. per annum; placing £25,000 to the reserve, £5,000 to buildings depreciation fund, and carrying forward £18,604.

MINES.

Camp Bird.—Interim of 1s. per share for quarter ending Jan. 31, payable Feb. 3.

Gopeng Tin.—1s. 6d. per share.

Kleinfontein Estates and Township.—12½ per cent.

Mount Morgan.—1s. 3d. a share for quarter ending Feb. 29.

New Gopeng.—1s. 3d. per share

MISCELLANEOUS.

American Woollen Company.—Quarterly of 1¾ per cent. on the preferred stock.

Belgravia Dairy.—Interim at the rate of 6 per cent. per annum for half-year ended Nov. 30, payable Jan. 25.

Bowhill Coal.—At the rate of 20 per cent. per annum for last half-year and a bonus of 20s. per share.

British Columbia Development.—5 per cent., or 1s. per share, for year ended Dec. 31, 1906.

Burnyeat Brown.—Interim of 10 per cent. on ordinary shares, making 15 per cent. for six months ended Dec. 31, or 30 per cent. per annum.

Farmers' and Cleveland Dairies.—Interim at the rate of 10 per cent. per annum for half-year to Oct. 27.

Fore Street Warehouse.—Further of 5s. 6d. per share, making 8s. 3d. for year, carrying forward £5,369.

General Life Assurance.—At the rate of 10 per cent. per annum.

Hunters the Teamen.—Interim of 5 per cent.

International Portland Cement of Ottawa.—5 per cent. for half-year to Nov. 30, making 10 per cent. for year ended that date.

Jorehaut Tea.—Interim of 2½ per cent. on account of year ending Dec. 31.

Kent Coal Concessions.—Interim at the rate of 10 per cent. per annum for half-year ended D c. 31 on preference shares.

Kidderminster Brewery.—2 per cent. per annum on the ordinary shares from date of allotment to Sept. 30, carrying forward £1,615.

London Produce Clearing-House.—3s. 6d. per share on the ordinary shares and £25 per share on 100 founders' shares, carrying forward with new reserve fund £23,600.

Mid-Kent Water.—Further of 3½ per cent. on the original ordinary shares and 2⅛ per cent. on the 7 per cent. ordinary shares, making 7½ and 5¼ per cent. respectively for year ended Sept. 30.

National Discount.—At the rate of 10 per cent. per annum, for half-year ended Dec. 31, carrying £15,000 forward.

Pearks.—Interim for half-year of 3 per cent. per annum on the ordinary shares.

Plymouth and Stonehouse Gas Light.—Interim at the rate of 6½ per cent. per annum on the ordinary stock for half-year ended Sept. 30.

Rio de Janeiro Flour Mills and Granaries.—Final of 1s. 9d. per share on the shares numbered 1 to 158,760 and 175,001 to 333,760, making 3s. per share for year ended Sept. 30.

Ripponden Commercial.—For past 12 months at the rate of 20 per cent. per annum.

Sheepbridge Coal and Iron.—Interim of 1s. per fully-paid share and 4⅜d. on each 8s. paid share.

Stansfeld and Co.—1 per cent. on the ordinary shares for year to Sept. 30, carrying forward £423.

Union Discount of London.—For half-year at the rate of 11 per cent. per annum, placing £15,000 to reserve, and carrying forward £61,348.

LONDON AND WESTMINSTER BANK.—Liabilities on Dec. 31, consisted of current accounts and deposits £26,818,173, acceptances and endorsements £1,760,342, and other liabilities £1,388,127 against which there were cash in hand and at Bank of England £4,246,044, money at call and short notice £4,092,454, Imperial Government securities £3,880,000, bills discounted, loans, &c., £17,916,789, and other securities £1,441,228.

THE REVENUE RETURNS.

I.—AN ACCOUNT OF THE TOTAL REVENUE OF THE UNITED KINGDOM, in the undermentioned periods of the Year ending March 31, 1908, as compared with the corresponding Periods of the preceding Year.

Quarter from 1st Oct. to 31st Dec. 1907, compared with the corresponding Quarter of the preceding Year.					Period from 1st April to 31st December, 1907, compared with the corresponding period of the preceding Year.

Deposits against future queries may be lodged with the Publisher.

F. E. D.—(1) A fair speculative purchase that should be good to hold. (2) We cannot recommend this as the life of the property is too short.

L. G. R.—Yes, there is a reasonable chance that dividends will be maintained. A year ago the board announced a favourable sale at a handsome profit, and it is said to have suffered little from the crisis. But the report should be out soon, and it might be well to wait for that.

W. J. B.—Yes. They are much too dear.

White.—(1) We prefer No. 1 to No. 2. (2) No, we can hardly recommend this class of share. You must never forget the liability on them. But if you decide to buy, then we should put C first and M and W second and third.

W. B. R.—There is undoubtedly a liability of that amount, and although the company is an excellent one it is being beaten by its rivals. The present, however, is a bad time to sell, and we should be inclined to wait a little.

India.—It seems a pity to sell this just now, although there may be no immediate recovery. There will always be some stocks lagging behind even when the general improvement sets in.

Anglo.—(1) So much depends on the price of the metal—which may go lower—that we cannot be sure no further decline will take place. The company, however, is an honest one, and it might be prudent to buy a few more on any weakness. (2) This company is said to be on the eve of paying dividends, and in any case this is not the time to realise a loss if you can hold on.

Vox.—(1) Yes, the bank you name is a good one for your purpose, as are also Union of London and Smiths and London and Westminster. (2) These have gone up recently, but they may recede a little, and if they do you should buy a few without waiting for the lowest. (3) In the present mood of the market you should not be in any hurry to sell. (4) No. We do not see any advantage to be derived from the proposed exchange at present.

Mithra.—It is not quite so liable to fluctuations, but has never been a steadily prosperous industry in that particular country, and the company, although paying good dividends, is not an over strong one.

E. P.—The bonds ought to be fairly safe, but you must not overlook the fact that the company is entirely under Yankee control.

Executor.—We doubt if it is possible to sell a large block of this stock. It would have to be disposed of gradually. The stock itself is not a very attractive one; the corporation has proved most treacherous. There ought to be security for this issue, but there has already been one serious default.

Cornwall.—There is, we fear, no prospect of an immediate recovery in these. It is a good property, we understand, but its working costs are high, and at present it cannot make a profit. We do not like to advise selling now, as in time the property may have a better chance.

BUSINESS NOTICES FOR THE NEW YEAR.

We are informed that the Right Hon. Lord George Hamilton has accepted the position of chairman and Mr. Bristow Bovill the position of deputy-chairman of the Phœnix Assurance Co., Limited. The directors also announce the following appointments:—Mr. G. H. Ryan to be general manager; Mr. H. B. Guernsey, fire manager; Mr. E. A. Boston, sub-fire manager; Mr. E. R. Straker, actuary; Mr. J. R. Turner, agency manager; Mr. J. H. Barnes, registrar; Mr. W. C. Weatherby, chief accountant; Mr. S. M. Southwell, cashier (fire); Mr. D. W. Jones, cashier (life); Mr. J. R. Hart, assistant secretary; Mr. A. T. Winter, assistant actuary.

Messrs. Brown, Shipley, and Co. announce that Mr. H. Maitland Kersey, D.S.O., has resigned his position, and in his place they have appointed Mr. C. W. Heath, heretofore manager of their West-End office. They have also appointed Mr. Henry John Doveton Clerk to be manager of their West-End office, and have authorised him to sign for them "per procuration" in London.

Messrs. Antony Gibbs and Sons have admitted into partnership the Hon. Gerald Gibbs, son of their prior, Lord Aldenham.

The partnership hitherto existing between Mr. H. C. K. Stileman and Mr. J. H. Jenks has been dissolved as and from the 31st ult. Mr. Wilfred Reacher has joined Mr. Jenks in partnership, and the practice will in future be carried on at Broad Street House, E.C., under the style of Jenks, Reacher and Co.

Messrs. Bourke, Schiff & Co., have taken offices at 28, Throgmorton Street, E.C.

The partnership hitherto existing between Chas. W. Rooke and John Skinner, carrying on business as chartered accountants at 46, Queen Victoria-street, London, E.C., and at Birmingham, has been dissolved as from December 31, 1907.

The National Provincial Bank of England has opened a branch at Palace-avenue, Paignton, Devon, under the management of Mr. H. F. Vale.

The Fairfield Shipbuilding and Engineering Co., Limited, has removed its registered office to 9, Victoria-street, Westminster, London, S.W.

The sales of farm lands by the Hudson's Bay Company for the quarter-year ending December 31 amounted approximately to 2,300 acres for £6,000, as compared with 12,400 acres for £30,400, and sales of town lots to £980 as compared with £1,500 for the corresponding period of 1906. The receipts are £48,400, as against £94,300 in 1906. The sales for the nine months to December 31, 1907, are 20,000 acres for £52,300, and town lots were sold for £9,700 as compared with sales of farm lands, 127,300 acres for £249,000, and town lots for £1,500 in the corresponding period of 1906. The total receipts for the nine months ending December 31, 1907, amount to £175,700 as compared with £241,900 for the corresponding nine months of last year. This looks like a reduction of £1 per share in the distribution.

The Consul-General of Roumania informs us that thanks to exceptionally good harvests, Roumania enjoyed a record year of financial prosperity in 1906-7, when the total revenue amounted to £11,700,000, with a surplus of 52,867,724 f. (£2,114,500). It would seem, however, that in the current financial year Roumania will eclipse the record of the preceding year, despite the fact that the harvests have been disastrously bad. The revenues of the Roumanian State during the first eight months of the current year, *i.e.*, from April 1 to November 30, have amounted to £7,900,000. This sum exceeds by £387,890 the receipts of the corresponding period of the previous year. Not only that, but it also represents an increase of £1,180,000 over the Budget estimates for these first eight months of the current year. During this period the surplus of revenue over expenditure reached £2,374,340. The items of the budget which are the most satisfactory with regard to revenue yielded are the State Monopoly Régie and the Customs. The revenue of the Monopoly Régie for the first eight months shows an increase of £318,340 over the Budget estimates. The Customs revenues, estimated to produce £1,240,000 for the entire year, have already during the first eight months exceeded that amount by more than £120,000. It is of interest to note that for the past six years, since M. Sturdza reorganised the finances of Roumania on taking office in 1901, there have been the following surpluses:—1901-2, £848,690; 1902-3, £1,293,190; 1903-4, £1,146,750; 1904-5, £259,730; 1905-6, £1,817,860; 1906-7, £2,114,710. The total surpluses for the six years amount to £7,480,220, or an average surplus of £1,246,710.

NEXT WEEK'S MEETINGS.

MONDAY, JANUARY 6.

Clarks Consolidated.—Winchester House, noon.
Crystal Palace Company.—Cannon Street Hotel, 3 p.m.

WEDNESDAY, JANUARY 7.

THURSDAY, JANUARY 8.

Dortmund Breweries.—Winchester House, 3 p.m.

FRIDAY, January 9.

New African Company.—Cannon Street Hotel, 12.30 p.m.

COMPANY MEETING.

INGALL, PARSONS, CLIVE AND CO.

The annual general meeting of Ingall, Parsons, Clive and Co., Limited, was held on December 10, Mr. W. Hacker presiding.

The Chairman said: In the few remarks I made at our last general meeting of shareholders, I said it was to be hoped that during the succeeding year now under review we should see one of two things happen; either that metal would be reduced to their normal value, or selling prices of finished goods raised in equal proportion. Neither alternative has, however, happened, and hence the result of our year's trading, though considerably better than last year, is still disappointing. That is scarcely to be wondered at, for the advances we have been able to make in our selling prices, though substantial, have not been nearly commensurate with the higher rates we have been compelled to pay for metals, especially brass and copper, which, as you know, advanced nearly 100 per cent. Under these adverse conditions it has been very difficult for us, in common with others engaged in similar trades, to work at a satisfactory profit; and although our output has increased considerably during the year, it has been chiefly in value and not so much in quantity, for the higher prices asked for our goods, inadequate as they have been, have undoubtedly checked buying to a considerable extent. The nett profit for the year is £3,766 19s. 6d. as compared with £2,193 13s. 2d. last year, an advance of nearly £1,600. Unfortunately, however, this only enables us to pay a dividend upon the preference shares of the same amount, although we carry forward an additional £1,050 to the benefit of next year. During the past year we have acquired, on very favourable terms, the ground rent of our soft goods manufactory at Aston, which now becomes freehold. This accounts for the addition of £3,997 5s. 1d. to the item for freehold properties, and for the consequent reduction in the item for leasehold properties, which now stands at under £5,000. I consider this a very satisfactory transfer of account and as a decided addition to the value of the company's assets, which are being continually strengthened, to the advantage of the debenture holders, who, at any rate, have nothing to complain of. Stocks have been reduced during the year nearly £3,800, which is, so far, satisfactory, although I hope that much more will be done in this direction during the present year. Helpful as they are in every way, in manufacturing economically and in executing orders quickly, I am, nevertheless, strongly of opinion that any trading concern that does not pay a dividend upon its ordinary shares cannot afford to be burdened by keeping heavy stocks of various materials and finished goods upon which interest of money is accruing all the time. Sundry debtors also figure in the accounts for nearly £600 less than last year, which, especially, considering the increased output, cannot but be considered satisfactory, so far; but here again I consider that the disparity between the amount we owe, £6,368 8s. 7d., and that we are owed, £40,491 3s. 1d., while a certain assurance of the financial stability of the company, is not in the best interests of the shareholders. The interest on this difference would suffice to pay a dividend of 6 per cent. upon the ordinary shares. Cash and bills at the bank and in hand show an increase of about £3,200, which is also satisfactory, and we are in the happy position, not only of being independent of our bankers, but of being able to pay all accounts when they become due, or before then if any advantage can be obtained by so doing. In fact, gentlemen, the only disappointing feature in the balance-sheet is the absence of sufficient nett profit to enable us to pay to the shareholders the dividend they are entitled to receive, and in the absence of this I personally feel that all the rest I have mentioned—satisfactory as it otherwise is—must be considered of comparatively small account. How this most necessary end may be achieved is the one subject that demands all our thought and attention. Internal economies of various kinds have been effected, and the business is now being conducted under the most careful supervision of all outgoings and expenditure. It seems to me, therefore, that there is no other prospect open to us than that of reducing still further the burden of interest we are having to pay upon a considerable amount of unproductive capital now employed in the business. It has always been the misfortune of this concern that it has had too much money, for the use of which it has been called upon to pay, and in my opinion it would have succeeded better if it had been poorer from the commencement of its career. It is in the direction of easing the financial burden that presses so heavily upon us and tends to exhaust the surplus from our trading, by making drastic reductions in value of stocks and amount of outstanding accounts, that I see hope for the future. I know there are many and serious difficulties in the way of doing either of these things; but by working together I feel sure these can be overcome, and, if so, the object we all so much desire will be brought nearer to us, if not quite within our reach, during the year upon which we have now entered.

Mr. Wm. Milburn, of Messrs. Wm. Milburn and Co., Newcastle-on-Tyne, has been elected a director of the York City and County Banking Company in the place of his late brother, Sir John D. Milburn, Bart.; Mr. R. T. C. Lyth, having retired from the position of joint general manager, has been elected to a seat on the board, and Mr. J. F. Darling has been appointed general manager.

NOTICES.

THE CAPE COPPER COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that an Extraordinary General Meeting of THE CAPE COPPER COMPANY, LIMITED, will be held at 9, Queen Street Place, London, E.C., on Wednesday, the 8th day of January, 1908, at 2.15 o'clock in the afternoon, when the subjoined Resolution, which was passed at the General Meeting of the Company held on the 11th December, 1907, will be submitted for confirmation as a Special Resolution, viz. :—

"That the draft new regulations submitted to this Meeting and for the purpose of identification subscribed by the Chairman thereof be and the same are hereby approved and adopted as the regulations of the Company to the exclusion of and in substitution for all the existing regulations thereof."

Holders of Share Warrants wishing to attend this Meeting must deposit same at the office of the Company three clear days before such meeting.

By Order of the Board,
P. J. FRANKS,
Secretary.

Registered Office:
9, Queen Street Place, London, E.C.
30th December, 1907.

NATIONAL DISCOUNT COMPANY, LIMITED.

Subscribed Capital	£4,233,325
Paid Up	846,665
Reserve Fund	400,000

NOTICE IS HEREBY GIVEN that the RATES OF INTEREST allowed for money on Deposit are REDUCED as follows:—To FOUR per Cent. per annum at Call, to FOUR AND-A-QUARTER per Cent. at 7 and 14 days' notice.

PHILIP HAROLD WADE, Manager.

Approved Mercantile Bills discounted. Loans granted upon negotiable securities. Money received on deposit at call and short notice, and interest allowed at the current market rates, and for longer periods upon specially agreed terms.

No. 35, Cornhill, E.C.,
2nd January, 1908.

THE UNION DISCOUNT COMPANY OF LONDON, LIMITED,

39, Cornhill, 2nd January, 1908.

Capital Subscribed	£1,500,000
Paid up	750,000

ADDRESS:—THE PUBLISHER, PRINTING HOUSE SQ., LONDON.

Mr. R. B. Haldane and "Public Opinion."

The Right Hon. R. B. Haldane, M.P., Secretary for War, has addressed the following letter to the Editor of PUBLIC OPINION:—

WAR OFFICE, 1st October, 1907.

Dear Mr. Parker,

I think that in the new form of "Public Opinion" under your editorship, you do well to make prominent what is concrete and living in the shape of the opinions maturely formed of men who are trying to do the work of the nation and of journalists the standard of whose criticism is high. What interests people is that which is expressed in a concrete form and has in it the touch of humanity. The views of strenuous spirits and the criticisms of really competent critics given in their own words comply with this condition. Your paper will succeed if it can only keep up to this standard, and I think you have brought it on to the right lines

Yours faithfully,
R. B. HALDANE.

Percy L. Parker, Esq.,
Office of "Public Opinion,"
Temple House, Tallis Street, E.C.

Printed for the Proprietors by ST. CLEMENTS PRESS LIMITED Newspaper Buildings, Portugal Street, Kingsway, London, W.C., and Published by CLEMENT WILSON, at Norfolk House, Norfolk Street, Strand, W.C.—JANUARY 4, 1908.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 523. New Series. SATURDAY, JANUARY 11, 1908. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

The Investors' Review.

The Past Year's Foreign Trade.

Its magnitude has been unprecedented. In merchandise alone imports, exports, and re-exports taken together it has reached a total of £1,164,000,000, and if we add in bullion the aggregate exceeds £1,304,900,000. The increase in merchandise imports compared with the preceding year has been £38,015,576 or 0.3 per cent. In exports of British and Irish produce the increase has been £50,629,258 or 13.5 per cent., and in the re-exports of foreign and colonial merchandise the increase has been 8.1 per cent. or £6,869,661. It is little detraction to these totals to say that they have been attained to no small extent through the higher prices ruling, for in many instances quantities have also continued to advance, at least until towards the end of the year. The very fact, however, that quantities are now showing diminution in some of the most important branches of our export trade warns us to look for smaller figures in the current year. The December totals, if not emphatic on this point, are suggestive. For the increase in values shown for that month is insignificant compared with the increases for the entire year, and, moreover, is altogether the product of augmented prices. Imports, for instance, have risen only £1,330,594 or 2.4 per cent., and exports are only 2.4 per cent. or £1,332,562 higher, while re-exports have actually shrunk by £1,026,100 or 13.2 per cent. The increase in the value of imports has been to a large extent the result of higher prices for all kinds of cereals. Last month we imported over 7 per cent. less wheat in quantity, but it cost us 22.6 per cent. more in money. The increase in the quantity of barley received was 5.7 per cent., and it cost us 38.4 per cent. more. Oats have not risen so much, but the increase in their value for December is nearly double the increase in the quantity, the respective figures being, quantity 14.5 per cent., and value 26.1 per cent. up. There has been a falling off of over 16 per cent. in the quantity of maize received, but the money paid for this reduced quantity has gone up 5.7 per cent. It has been much the same with raw materials, for alongside a decrease of 4.4 per cent. in the quantity of raw cotton received, there has been an increase of 3.2 per cent. in the price paid. Flax, too, has cost more, for although there is a decrease of nearly 50 per cent. in the value that is because the quantity is down nearly 59 per cent. Hemp and jute alone amongst the more important raw fibres utilised in our manufactures have fallen materially in price, but among metals tin and copper are much cheaper, for reasons sufficiently known. Wool has fully maintained its price, and cost rather more last year than in December, 1906.

And if raw materials have cost us higher prices we have not always received full compensation in the price obtained for exports. Had it not been for the continued phenomenally large export of coal the aggregate value for December would have shown no appreciable increase at all. But we sent nearly 17 per cent. more coal in quantity out of the country during the month, and received nearly 47½ per cent. more money for it; in other words the quantity went up by over 777,000 tons and the value by £1,185,183. Our principal customers continue to be our nearest European neighbours, France and Germany, but Italy also bought

more last year, as well as Sweden, Norway, and Denmark, and one wonders why this should be so, so far, at least, as Germany is concerned, when the reports from that quarter indicate diminishing business and a smaller output by the manufacturers. The explanation probably lies in the fact that the contracts now being executed were entered into before the American crisis came to a head, and if this be the case we must count upon a sharp diminution in the orders, not only from Germany, but from other larger customers, as soon as the present contracts have been filled. In this one direction, therefore, diminished business is to be expected; and already the exports of iron and steel have fallen off, although the reduced weight of shipments is disguised to some extent by the still prevailing prices. This is not quite true of machinery and millwork, the weight of which exported last month alone shows an increase of nearly 14 per cent., and the value an increase of nearly 18 per cent., but the significant fact is that even in this instance, as throughout the list with scarcely an exception of any magnitude, quantities either show positive diminution, or are relatively less elastic than prices. The most familiar exception is copper, which has risen 31.6 per cent. in the quantity exported, while the value is down 3.8 per cent., but that counts for comparatively little as against the general tendency. A more significant exception, perhaps, is cotton yarn and twist, the quantity of which rose by 16½ per cent. in December as compared with an increase of over 21 per cent. in the value, but the quantity of piece goods exported has fallen off by nearly 5 per cent., this being disguised by an increase of nearly 3 per cent. in the value. Jute piece goods are down in quantity nearly 12 per cent., linen piece goods over 22 per cent., chemical manures over 15 per cent., soda and compounds 11.5 per cent., refined sugar nearly 42 per cent., wool 63.4 per cent., woollen and worsted yarn over 13 per cent., and worsted tissues nearly 12 per cent., woollen tissues alone showing a slight increase last month compared with December, 1906. In not one of these instances, however, has the fall in value been equal to that in quantity.

The facts thus appear to point to the imminence of a period of declining trade, since quantities cannot long continue to recede without exercising an adverse effect upon prices. And there is one influence working in this direction that has frequently been emphasised in these columns—viz., the influence of credit operations upon trade expansion. One has but to look at the particulars of our iron trade to see how credit helps to expand business. Many descriptions of iron and steel manufactures exported by this country find customers the world over. We have a large business in pig-iron, for instance, with most European countries, and last year found the demand from the United States of North America considerably more important than in either of the two preceding years. It is otherwise, however, with other raw iron or steel manufactures or half-manufactures of various descriptions. These Europe for the most part leaves alone, and the most conspicuous demand for them comes from British East India, the Argentine Republic, Australia, and New Zealand—all countries whose power to pay is more or less dependent upon facilities for borrowing. More marked still is the restricted distribution of British-made rails. Last year we sent a few tons to Russia and more than 10,000 tons to Sweden, but no other European country bought enough to be distinguished by separate mention. Here, again, Chile, the Argentine Republic, British India, British South Africa, Australia, and New Zealand are the largest customers, and the same display is made by other important divisions of this great trade. India was last year the largest absorber of steel bars, angles, &c., of any country outside these islands, except Japan, and Japan is paying for its heavy import of rails wholly by the help of borrowed money. So are Australia and Canada. Countries that are not under our thumb, as it were, in this respect are rarely more than fair, steady customers. And if we go to machinery, it is the same story. Locomotives, for instance, were shipped to the value of £1,655,000 to countries in South Africa last year, and India took £1,223,000 worth, no other single customer, except Spain, taking as much as £100,000 worth.

Now, it may be that the general demand for one or other of the endless variety of articles produced by us for sale will never sink to the minimum of former years, but it has none the less to be borne in mind that were these borrowing countries who constitute our principal customers in some of the largest or most profitable branches of our commerce to be debarred from financing their payments by help of loans raised or stocks

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.

The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board values."

and shares issued upon the London market, the recoil in the aggregate value of our exports would for a time be severe. We look for that recoil now because the recourse to finance has been so strenuous during the past few years that a period of rest and recuperation is now imperatively necessary. Our market must have peace, comparative peace, from the calls made upon its resources by those who pay by borrowing. There is only a certain amount of money, of wealth as expressed in banking credit, being saved in the country every year, and that amount has been reduced of recent years, so far as credit generating power is concerned, by the prolonged decline in the prices of the very best classes of stocks. If we are to get back to a state of health, and to allow the savings of the people to overtake, and, as it were, honour in cash the credit based upon these savings—often to an extent far beyond their amount—then there must be a great reduction in the loan issuing and company promoting industry.

But this is just the opposite of what we are told to expect. No fear is more often expressed in Throgmorton Street than the fear that the outpouring of loans and company capitalisations held back by the long season of adverse market conditions will check the hoped-for recovery and produce a worse state of affairs nine or twelve months hence than the one at present experienced. This fear is wholesome, and may do not a little to avert the very calamity anticipated; but just because it may act in this way we are increasingly certain that a period of trade set-back—not decay, mind you—is about to set in—has, indeed, already set in. It is visible not only in our iron and steel trade, and in machinery of various kinds, but in the great cotton and other textile trades of the kingdom. Fully a dozen more or less good customers for cotton tissues last year took less than the year before, and many of them less than they took two years ago. There has been a notable reduction in the imports of China and Hongkong, a rather striking falling off in those of the Argentine Republic, and although the Indian demand is kept up for most divisions of that empire, there has been a decline in Bombay. At the worst, however, the foreign trade of this country is something to wonder at, and its expansion during the last ten years has been unexampled in the history of our own or any other country. This is of good augury for the future; we cannot help thinking it a good augury for the peace of the world. The exchange of commodities between nation and nation cannot go on and increase without strengthening the forces working for harmony between them. In one direction, let us note, business was splendid last year—in the export of new ships. But it was the ships used in commerce, not in war, that gave all the increase. The number, indeed, of war vessels built for foreign countries was larger last year than the year before—six as against two—but the tonnage was only 6,592 against 18,533 in the previous year. A comparison of the mercantile vessels exported reveals an increase of 120 in the number and of 189,400 tons in the capacity. Here, also, we fear the maximum has for the present been reached, but it is a fine business whose message is of peace.

The "Times," Limited.

When the announcement appeared in last Sunday's *Observer* that the *Times* was about to pass under entirely new control, most people jumped to the conclusion that the Messrs. Harmsworth had picked it up to be added to their many other acquisitions and journalistic triumphs. Those who thought this were wrong. The engineer called in to readjust the machinery, and, if possible, set the coach running again full loaded, is Mr. C. Arthur Pearson, and really we do not know that Mr. Arthur Walter could have found a more capable man for the purpose in hand. That the *Times* has been going downhill steadily for a long time past it has grieved all who formerly admired and trusted it to note, but there could be no mistake about the signs and symptoms. Every step taken of late years seemed to be hurtful to the best interests of the paper, and ever since its management came in a sense to be guided by bustling Americans it has made one blunder after another. It is unnecessary to enumerate all the mistakes now, but one cannot forget the *Encyclopædia Britannica* fiasco and the bitterness that sprang from the success with which that old book was advertised after a fashion suggestive of complete absence of moral restraint. Tens of thousands of people were induced to buy this book, mostly an old book, by what really amounted to brutal mystification. The method of sale, too, was, however smart in the Yankee sense, most injurious to the newspaper in whose name the vending business was conducted. People of small means or no means at all found themselves saddled with instalments falling due monthly for a period of years, and no sooner had the book been delivered to them than they discovered what an antiquated affair most of it was—a dead book resuscitated by the furious extravagance in puffing after the style of the up-to-date Yankee advertiser. Then followed the quarrel with the publishers by which the *Times* lost an advertisement revenue of £10,000 per annum and obtained no compensating advantage whatsoever. It was surely a ruinous mistake to permit a solid body of astute business men like the publishers to discover that they could sell their books as well or better without the help of advertisements in the *Times* as with them. That revenue, therefore, looks to be gone for good, and, considerable though the benefits were accorded to *Times* subscribers in the free supply of library books, even that was marred by the cheap remainder trade tacked on, and the trappy methods adopted in trying to sell books, old, new, and waste, to the library subscribers. At the time when this new business first developed we unsparingly denounced these methods, but they do not seem to have been much altered for the better since, and the discount given on its subscription price by the *Times* to those who carried on this library and book vending sucker must have intercepted the whole or most of the profits formerly secured to the proprietors by the sale of the newspaper.

No wonder, therefore, that shareholders in the *Times* have long been restive and grumbling, for they have been deprived of their dividends. We heard recently of an instance where a shareholder who formerly received an income of over £2,000 per annum from the profits of the paper had it cut down to one-half some time ago, and finally to nothing at all. That could not go on, and early last year Mr. Arthur Walter, in order to avert an action at law, the object of which was to have the conduct of the business put upon a better footing, undertook to convert the proprietary into a limited liability company. This pledge is now to be fulfilled, and Mr. C. Arthur Pearson has been called in to assume the position of managing director, with Mr. Arthur Walter as chairman of the new board. This doubtless means that the *Times* will be floated as a limited liability company more or less on the same lines as the *Standard* was. The interests of the existing proprietors will doubtless be wrapped up in the new share capital, which, we may be sure, will be expertly shaped in such a way as to create a marketable security. No more practised hand at this kind of business could have been found than Mr. Pearson's. In justice to him it must be admitted that he appears to have done considerably better with the *Standard* than at first seemed probable. We hear on all sides that the *Evening Standard*, at all events, has made rapid progress under his guidance, and there is proof that this must be so in the imitation of the *Pall Mall* and *Westminster Gazettes*. Both of these newspapers have copied the *Evening Standard* in their method of presenting their news. Whether Mr. Pearson will cut away the *Times* Book Club excrescence or not, the information thus far allowed to leak out, or officially given, does not enable us to guess; but the probability is that the sway of the enterprising Yankee is coming to an end in Printing House Square, and that one more American failure to "bustle up" the old country and

make it the victim of monopoly is about to be added to the many that have gone before. And what is to happen to Mr. Moberly Bell, who has been a man of prodigious energy, is a hard worker, strenuous and indefatigable in the fulfilment of his duties? He, we infer, cannot continue to serve under Mr. Pearson, indeed, the *Manchester Guardian* says he has already gone. Will he unite his fortunes with the Book Club, and start in conjunction with Messrs. Hooper and Jackson a rival newspaper, or a new publishing house on the basis of cost price with the author left out, or will he retire into private life? These are more or less personal or speculative questions, but yet of considerable interest. The all-absorbing topic, however, will be the fate and fortunes of the *Times* newspaper itself under its new management. In spite of the mistakes of the past, it still holds a great position in the eye of the public, and is still regarded on the Continent as the one authoritative exponent of English public opinion. Will the change and the necessary publicity accompanying the change dispel what remains of this glamour? That is not improbable, and we therefore fear that the new undertaking Mr. Pearson has on hand will tax his energy, his business acumen and resource much more severely than even the handling of the *Standard* did. But there is one good point; no "tariff reform" control is involved in the change, the official information assures us. And if the *Times* reverts to the old position of impartiality it sometimes held, divesting itself of fads and prepossessions and the sophistries of lost causes, it may again become the pride of British journalism.

"More Taxation Inevitable."

Under this heading Tuesday's *Daily Mail* contained what is called a forecast of the Liberal expenditure for the next three years. As may be presumed, it is not a friendly forecast, and is not in any sense designed to help the party in power. There is perhaps exaggeration in the figures, but yet enough truth to make them serve as a warning. A protective tariff is near if the prospect is realised. We have lamented from the first the apathy displayed by the Chancellor of the Exchequer, and the heads of the greatest spending departments, towards the urgent demands of the nation for relief from excessive taxation. Did we not know that the names have been changed we might still regard the War Office and the Admiralty as appanages of the Tory party, and Mr. Asquith's weakness in yielding to the crude and unreflecting demands for old-age pensions is a bad omen for the nation. Not only is higher taxation in prospect for these and other reasons, but the only direction in which reforming zeal is efficiently displayed has been in the collection of existing taxes. Legally the Chancellor of the Exchequer is perfectly right in endeavouring to compel those liable to income-tax to pay up promptly, and we should have had no word of remonstrance against this policy if it had been accompanied by an earnest endeavour to cut down the public expenditure. No such endeavour has been made nor, beyond the 3d. off earned incomes, is any disposition shown to consider the necessities of the people at large. Not long ago Mr. Edmund Robertson coolly and frankly informed the country that the expenditure on the navy must be progressive, and the *Daily Mail* estimates the outlay upon it for 1910-11 at £44,000,000, or over £12,500,000 more than it was put down at for the current year. Really, there may be little exaggeration in that guess because the more ships we build the more money must be required for their maintenance, and the further we go in outvying our neighbours in this form of wasteful expenditure, the more deadly and ruinous does it become in its magnitude. But the army charges must also mount, and we are disposed to regard the *Daily Mail* estimate of £29,000,000 for 1910-11 as under the mark. It is more likely to exceed £30,000,000 because Mr. Haldane will not be able to persuade county associations or any other local body to put extra charges upon the rates for account of the army, and even if he did succeed in so doing the aggregate burden would none the less be borne by the community. Everything, therefore, in these two departments tends to encourage increasing outlay, and this prospect is before us at a time when the nation is entering upon a period of slackening trade, and probably enough, higher cost of living. The cost of living is even now much higher than it was eight years ago, and when oppressive taxation is added to this it is not difficult to understand why we should have an unemployed question becoming more and more pressing with each winter, or that the tide of emigration should be always at the flood. Why otherwise should the percentage of unemployed be considerably higher to-day than it was eight or nine years ago, when our foreign trade was much smaller than it is now?

Other items in the forecast of the *Daily Mail* may be open to more dispute, and yet we fear the Education Department may want £20,000,000 three years hence, unless it can tap the misused wealth of the London livery companies, and redistribute the charitable endowments now appropriated by the rich, while if old-age pensions are really begun by help of Mr. Asquith's "nest egg" of £2,250,000, there is no knowing what figure that new charge will ultimately reach. All estimates about it are guess work, and whatever the theoretical value of old-age pensions may be, it is monstrous to think of putting such a charge even at its smallest upon the people, while the Imperial demands for the army and navy are so outrageously excessive. The *Daily Mail* puts the old-age pension charge in 1910-11 at £18,000,000, and seems to find justification for the formidable total in Mr. Harold Spender's *Contemporary Review* article. That gentleman writes with light-hearted ease about placing eight, ten, or more millions additional upon the taxpayer for this purpose, and in doing so shows that he has never gone very deeply into the question of national economics. As the *Mail* points out, also, he eliminates certain classes from those to whom the pension should be granted, though the scheme is in time to be universal. It must be that in the long run if started at all, therefore it is possible enough that even here the *Daily Mail* may prove to be right unless the whole project can be stopped at the initial stage. We shall look to independent members of Parliament in the coming session to put their backs to the wall and fight to the bitter end against every such misuse of public money. It is sham socialism, sham philanthropy, and if started will certainly become a source of the most deadly political corruption. It is also at the root a dishonest project, inasmuch as it is to be unaccompanied, so far as we have ever discerned by any genuine effort to reform the Poor Law. That would be a formidable job, we admit, but is the necessary preliminary to all pension schemes. Altogether, therefore, the outlook is distressing enough, and points to an Imperial expenditure of nearly £160,000,000 in 1910-11. Neither the nation nor the Empire can bear anything like an outlay of this magnitude. The nation depends for its ability to pay the existing taxation upon the faithfulness of its colonial and other debtors in meeting their obligations, and everywhere amongst our dependencies there are evidences of distress. Some of them would have defaulted on their debts to us long ago but for their ability to raise further loans here to keep them going, and it only requires the London Money market to continue embarrassed, overloaded by its undigested commitments, for another year, to force several of our debt-stifled dependencies into bankruptcy. Where shall we be then; where will our great foreign trade be, a trade unrivalled in its magnitude, but also a trade stimulated to a dangerous extent by recourse to credit? It is always the old story of the customer borrowing from the tailor the money to pay for the clothes he orders. From this point of view the whole Imperial system is credit bolstered, and because it is so the necessity to economise in public expenditure is more imperative than we can express. Our very Imperial revenue is credit

created or sustained to an appalling extent when we take the trouble to look beneath the surface. Therefore, a reduction in taxation, not an increase, is what the country urgently needs. If this reduction is not brought about; if, on the contrary, taxes continue to increase in weight and number, no long time can elapse before the Empire will be in inextricable difficulties from one end to the other.

Economic and Financial Notes.

The Indian Loan and its Security.

Unprejudiced observers will hardly regard the spread of famine in India as additional security for the new loan of £5,000,000 thrown upon the market for that dependency this week. A sort of daring simplicity must be dominant in the minds of the Simla Government and its Secretary of State here else they could hardly have chosen the present moment to float this loan. Perhaps, however, they had no choice if the brooding currency troubles were not to come to the surface. The imminence of a dangerous relapse in the exchange has been signalled to us for some time back by the inability of the India Council in London to sell its drafts upon the Indian Treasuries. The withholding of these drafts must have created a large amount of Indian Government indebtedness on current account here, and hence probably the issue of this loan. It comes out at a moment when the numbers of the destitute in India are mounting with great rapidity. The Viceroy's telegram on January 6 raises the total to 136,000. There are now 68,404 miserable human beings on the relief works in the United Provinces, besides 32,928 receiving gratuitous relief, presumably because of their incapacity to do task work of any description. In Central India the numbers are also running up fast, 32,781 people being reported as on the relief works, with 1,897 in receipt of gratuitous aid, and all over India except in part of the Madras Presidency, Burma, Eastern Bengal, Assam, Bombay, and Hyderabad there has been no rain. Prospects are therefore becoming worse throughout Central and much of Western and North-Western India. Even in Bengal there is a great deal of distress, and in Orissa, once before the scene of a devastating famine, distress is imminent. Over the whole of India the total number in receipt of State relief is put at 140,000, and the area sown with wheat is estimated to be 34 per cent. less this year than last. In the Punjab and United Provinces the decrease is respectively 42 and 35 per cent. There is also a decrease of 37 per cent. in the area sown with oil seeds, and prices naturally show a tendency to rise. They must rise, not only because there is famine, want all over the land, but because the Simla Government has cursed the people with a dishonest currency. Such is the outlook, such the security offered for the new Indian loan.

What has Mr. Morley to say to it all? Ah! he never was a financier, knows nothing about the relation between debt, with its concomitant oppressive taxation or currency sweating and human misery. But Mr. Morley is a philosopher, and probably knows better than most that empires live their lives even like the speeding generations of men. The period of their adolescence is followed by the years, it might be centuries, of vigorous manhood, and then comes old age and swift or slow decay and at the last silence evermore. As it has been so it will be to the end of time, and the Secretary of State for India may well be content to sit still, knowing that nothing within his power to do could arrest the imperial law of being. And is not the modern loan system better calculated to prolong life's agony than the harrowings of the Romans?

The New Prussian Loan.

A smack of despotic government is to be discerned in the official announcement made last Saturday about this loan. Its amount was not then disclosed, but the German banks, insurance offices, and monied classes were asked to subscribe for an indefinite number of millions of new Prussian Consols, and to engage not to sell any of their allotments before the end of this year. Another high-handed touch was noticeable in the channel through which the issue is to be made. Hitherto syndicates of banks have taken charge of the frequently recurring additions to the Prussian and German Imperial debts, but this new loan is to be issued by the Seehandlung Bank, which is a Prussian Government institution. It is, through that official channel, thrown at the financial interests on the high and mighty, take-it-or-leave-it system; yet the very terms on which the new debt of indefinite amount was offered indicate that all is not well with the finances of the Government. Interest on the new loan up to 1918 is accorded at the rate of 4 per cent. per annum, for the following five years it is to be 3½ per cent., and after 1923 it comes down to 3½ per cent. The explanation offered is that the Government dislikes the idea of having to revert to a permanent 4 per cent. debt, but surely this scaling down is not a method calculated to attract the investor. He wants something that will promise an increase of capital value, and how is that to be brought about with a falling rate of interest? On this ground alone we should expect the issue to be a failure, even although it is offered to the public at 98½. In 1906, £10,000,000 of 3½ per cent. Prussian Consols was issued at par. At the present time, however, the rate of the Imperial Bank of Germany is 7½ per cent., and the strain put upon it at the end of the year was something almost, if not quite, unprecedented, as the return dated December 31 indicates. At that date the note circulation was £31,299,000 above the legal maximum, it having been only £13,497,450 above the week before and £9,770,450 above it in the third week of last month. Such an enormous inflation of the paper money, the total amount of which outstanding at the end of the year was £94,296,000 against £88,795,000 at the end of 1906—an increase of £5,500,000 in the notes against an increase of only £1,958,000 in the gold on the year demonstrates the critical position into which German mercantile affairs and business finance have tumbled. Is it to be supposed that people who are obliged to pay from 5 to 8 per cent. for accommodation, even now, when the New Year has come, bringing some slackening of the strain with it, will hurry to pick up a loan which offers them little more than 4 per cent. on the price of issue, with the prospect of successive reductions in future years? It will surprise us much if the loan does not prove to be a failure and a bar to the coming issue of a large Imperial loan, which is expected to be made next May. Why did the Prussian Government take this step at the beginning of the year? Probably because neither the Imperial Bank of Germany nor any other bank or group of banks in the country is in a position to continue to finance its floating debt. It has been living on successive issues of 4 per cent. Treasury bonds, made as the impulse or necessity of the bureaucracy dictated. These bonds have not found a ready market; they have been thrust upon the Reichsbank, which had to dispose of them as best it could. Probably it failed to dispose of much of this accommodation paper, and as its position was obviously on the verge of being extremely critical at the end of the year, the Prussian Government may have had no choice but to try and draw money from the nation at large. The nation has no money, or not sufficient money, at the present juncture, to put away any such loan on the terms offered.

In his Budget speech Baron von Rheinbaben, the Prussian Minister of Finance, kept the secret of the amount of the new loan, but drew a rather gloomy picture of business prospects in Germany for the current year. There were indications, he said, that the country was approaching less favourable times, and although he saw no ground for despondency, he framed his Budget with a view to having to provide for a considerable deficit. The year 1906, he said, had been favourable for the entire country, and the Prussian Budget closed with a surplus of £725,000. But 1907 has not done so well, and a deficit of between

£2,250,000 and £2,750,000 is looked for when the accounts relating to it are finally made up. This deficit is attributable to the comparatively unfavourable returns from the railways, and the outlook being so discouraging, 1908 is also expected to show a considerable shortcoming, the expenditure being put at £168,101,000 or £8,097,387 more than the estimated outgoings for the past year. A portion of the shortcoming, whatever it may be, and it may be £10,000,000 or more, is to be provided out of the new loan, the money being required for the railways and to provide for the speedier opening up of the State coal fields in Westphalia. But further taxes are also to be imposed, including a moderate increase in the income and property taxes, so that the drain upon the people is increasing in two directions—by the swelling demands of the Prussian kingdom and of the German Empire.

New African Company.

"During the early part of the year under review some profitable realisations were carried out, but the great depreciation of values which then set in and has since continued has rendered further advantageous sales impossible. Although the market value of the company's assets has since declined, the intrinsic value of most of its important holdings has in many respects improved, and with a revival of business in South African and other centres the company's investments should greatly appreciate in value." Thus the directors of this well-known but unlucky concern express themselves in the report for the year ended June 30, and shareholders can estimate the likelihood of their anticipations bearing fruit as well as we can. But a long experience teaches us that as a rule market values and true merits go up and down together. Note, for example, how glowingly the directors speak of the Welgedacht Exploration, and set this word-spinning against the performances of the shares on the Stock Exchange. For weeks past the price has been going down, down, and last Monday when the South African market was all ablaze this company's shares were almost the only ones to move the wrong way. Their value now is 15s.; a year ago it was over 60s. On the company's property, we are told, the colliery equipment, capable of dealing with 20,000 tons per month, has now been completed, and is actively working, and the concern has joined the Coalowners' Association, which has been formed on the Rand for the purpose of securing a reasonable price for the output of its members. No further work has yet been done on the 1,240 gold claims belonging to the Welgedacht Company, "but the satisfactory developments on the neighbouring claims of the Geduld Company indicate that these gold claims constitute a most valuable asset. It must be noted that the Welgedacht Company, with its issued capital of £104,000 holds the freehold of the whole farm, the colliery, and the gold claims above referred to. A revival of interest in South African mining ventures would soon, therefore, make itself felt to our advantage." Sounds splendid, does it not? Now turn to the report of the Welgedacht Company, issued last September, but by no means freely circulated, so far as we can gather. First of all, there is a complaint that the Government has not seen fit to throw open the farm Welgedacht, proclaimed a public goldfield on February 15, for public pegging, and the directors then proceed to tell us something about the coal section not mentioned in the New African report. Passing by the reference to delays in the commencement of coal winning—these always occur—we come to a highly important admission. It refers to the development work in the colliery, and is to the effect that the irregular formation referred to last year, which then showed signs of disappearing, did not do so, "but has been with us all the year." This unfortunate circumstance has been the cause of very considerable additional expenditure in development work, and has altogether upset calculations from the financial standpoint. Indeed, all the company's available coal has vanished, and at June 30 it owed £14,576 to its bankers, a debt which has since been increased. In the circumstances, the persistent weakness of the shares is highly significant. What does it portend? We may know before long. All which puts a somewhat different aspect on Welgedacht affairs. The New African Company is, of course, interested in the Mozambique Company besides, Abyssinia, Egypt, West Africa, Australia, and, inevitably perhaps considering its directorate, the Marconi Company. In the comments upon each the same delightful optimism is apparent, and the directors are perfectly convinced that no matter what the disappointments of the past, everything will turn up trumps. Coming now to actual results, we find that the revenue in the twelve months to June 30 was £22,940 and the outgo £10,599, leaving £12,341 nett. Balance brought in was £17,898, and by using all but £6,905 of this credit the directors in December, 1906, contrived to pay a dividend of 6 per cent., scarcely a wise policy looking at the state of the company's finances. Cash is just £1,820, and Stock Exchange and other loans £38,189, while debtors owe £20,766 against creditors and bills payable of £10,835, and £14,121 will come in on account of shares sold but not delivered compared with only £2,149 to be paid for shares purchased. That looks all right, but how about loans contracted on behalf of the company and a syndicate against securities £59,396? If those could be called in things would look pretty awkward, because the brilliant recovery in values has not set in yet. The company's investments have a balance-sheet value of £446,937, the greater part of which appear to be quoted. What is their present market worth?

The Gordon Drill.

We are delighted to read of the great success which has apparently been achieved by the Gordon drill, because it has long been a contention of this paper that closer attention to the matter of mechanical appliances and less to political propaganda with the object, among other things, of proving the necessity of that lamentable Chinese experiment, would be a paying business. And is it not remarkable that the moment it was known the Chinese were to be repatriated wonderful labour economisers were immediately discovered? Many coolies had left by the end of November last, and yet we learn that the November expenses of 63 Rand mines, representing 99 per cent. of the output, amounted to only £1 per ton, the exact figure, or 2s. 6d. per ton less than the average of previous years. And we have no doubt whatever that if the mine owners give strict attention to business and devote their energies to mining—it is lamentable to have to say these things—the Transvaal Government, which has already proved itself an enlightened administration of the highest order, can be depended upon to do its share in promoting the welfare of the mining industry, with whose prosperity it is and must always be closely bound up. It should ever be borne in mind that any increase in profits earned by the mines must come from a reduction of costs. In most mining countries there is always the possibility of a lucky find to improve prospects, but the formation of the Rand reefs is so regular and well defined that apart from occasional faults the tonnage and, within a little, the value of the ore to be won from each group of claims can be estimated to a very fine point. The gross contents are known, and the nett yield depends upon the ratio of working expenditure. Hence the necessity of introducing all possible labour-saving appliances, not only from the point of view of the big producers, which can work at a profit even with costs much heavier than now, but on account of the low grade propositions. Many of these are too small to justify the erection of very large batteries as on the Simmer and Jack, but with costs anything under a sovereign a ton many could be made to pay with comparatively limited stamping power. With efficient appliances in the mines and tube mills on the surface the outlook for the industry appears to be brightening again, despite the unhappy past and the way in which matters have settled down

since the Transvaal was granted responsible Government is in striking contrast to the awful chaos which prevailed for so long after the conclusion of the war.

But to return to the subject immediately under discussion, the Gordon drill. At the end of last week there came to hand from Johannesburg a cablegram to the following effect:—"The exacting stope drill trials for the trophy given by the newspaper *South African Mines*, which have aroused the greatest interest, have resulted in a victory for the Gordon drill, and Messrs. Eckstein are installing 200 of these drills. Twenty-five drills worked by four whites and 25 natives will be started in the Crown Deep mine in a few days' time. A native working a Gordon drill in five hours achieved results equal to the average day's work of 15 coolies or natives. The success of the drills will have a far-reaching result on the labour problem." Of course, it must not be supposed that the invention is quite new, and put in the way it is the information gives the impression of skilful stage management for the purpose of effective display. As a fact, the drill has been in operation for at least a year, if not a good deal longer, and it need hardly be concluded from the above cable that Messrs. Eckstein are not using the drill already. They did not have 25 drills stacked at the mine ready to drop down the shaft the moment the result of the competition was known. In fact, the first experiments were carried out at the Robinson mine, an Eckstein or Wernher-Beit Company, and just twelve months ago we published an article minutely explaining the method of working. In the course of this article it was stated that "in the Robinson mine, it appears, the natives have adapted themselves very readily to the new appliance, 'Green' boys becoming adepts in a couple of days. It is not yet ascertainable what the operating costs per drill per hole are, but there is the fact that if four drills handled by four natives will put down 18 holes per shift the labour of 14 natives is saved and made available for other work. On the Rand the common task at present for hammer boys is one hole one shift, and when the one hole is finished the native goes to the surface as soon as he can, or if he cannot walk up to the surface, and the skip is not available, he finds a comfortable nook and goes to sleep." This drill news was just the thing wanted to give the market a good push off—it has been held in readiness these weeks past—but as on many occasions before the pace at the start has been tremendous, and if things go on as at present the public will either be scared away or seize the opportunity to sell instead of being attracted back to the market.

American Business Notes.

Steady improvement continues to be exhibited by the New York Associated Banks in their weekly averages. In a little while, therefore, we may expect to see the individual positions of these banks set forth as they used to be, and if the State Government is able to put an enactment through the Albany legislature, compelling all banks doing business within the State, whether national or not, to issue periodical returns of their assets and liabilities, there will be some chance of coming to comprehension of the real position. At present we only know the summary figures of a special group of banks whose offices are in the City of New York, and these figures for the past week show a further decrease in the loans and discounts amounting to £2,964,400. This brings the total of these loans and advances down to £226,574,000 against a total of £229,538,000 in the week ending December 28. At the same time the nett deposits have fallen off by only £492,000, so that money is obviously beginning to come back in some volume. The increases in the specie and federal paper money further prove this to be the case. Specie is up £850,000 and greenbacks £760,000 on the comparison of weeks, so that in spite of the smallness of the decline in the nett deposits there is a shrinkage in the deficiency of the statutory reserve amounting to £1,332,000, and the total shortage is now only £2,302,000 against £4,014,500 the week before and £8,019,500 at the end of the third week of December. Here we have a clear and welcome proof that things are settling down, at any rate in New York. At the end of November the reserve was £10,598,000 short of the statutory minimum of 25 per cent. of the nett liability on deposits.

Elsewhere there is also evidence of improvement, and if speculation is restrained and the business of the country brought back to a genuine basis of demand by this time next year, perhaps we may be able to say that the people of the Union have surmounted their finance and monopoly-created difficulties. The improvement so far made cannot be relied on as proof that they have yet done so. It will take many months, probably enough several years, to bring solid prosperity, and until the progress made towards recuperation has been far greater than anything yet seen, it will be prudent on the part of British investors and speculators to abstain from following the eager and solicitous lead given by Wall Street in buying its securities. Almost superhuman efforts are being put forth in New York to drive up the prices of securities and to disseminate favourable views of the immediate future. It is, however, still a war of bull and bear in great measure, and the less we have to do with that fight the better for our purse and peace of mind. Remember the financial necessities of the railroads, the fierce clamour for help, more help; money, money in all parts of the Republic, the slowing down of business, the spreading want among the people, and the many bankruptcies declared, or about to be, and keep a cool and sceptical mind.

Much amusement and no small instruction are to be extracted from the preliminary statement of the New York Central Railroad for the calendar year 1907. As we mentioned the other week, the dividends declared by two of this company's subsidiaries, the Lake Shore and the Michigan Central, were increased, and it now appears that without this increase the Central could not have continued to pay 6 per cent. dividends on its own stock. Even with the help of the increases opportunely furnished by the Lake Shore and Michigan Central Companies, the surplus remaining to the New York Central company after paying 6 per cent. on its stock is barely £66,000. Its increase in dividends from investments, as the phrase is, was about £714,000, and the decrease in the New York Central's own nett earnings was £548,000, but it has now to pay dividends upon $179,000,000 or nearly £36,000,000, of its own common stock against $150,000,000 or £30,000,000 in 1906, so that all the extra money provided by the advance in the Lake Shore stock dividend from 8 per cent. to 12 per cent. and in the Michigan Central dividend from 12 per cent. to 14 per cent., was almost completely absorbed in maintaining the New York Central Company's own 6 per cent. rate.

But how were these subsidiaries in a position to give these extra dividends? They were made free to do so apparently by the manipulation of their working expenses, which seem to go up and down to order. It is now the turn of the New York Central itself to expand its current outgoings, and to counterbalance this the ratio of expenditure on its principal dependent roads has been cut down. A friendly chronicler of the financial performances of this great system has explained that the expenses of the Lake Shore line last year could easily be cut down because they had been very heavy some years before, and the same observation applies to the Michigan Central. Neither of these roads seem to have been much hurt by the adverse state of the weather in the early part of last year, the Central alone was hit. So they raise their dividends to help it along. What does this suggest if not a skilful, though not scrupulous, arrangement of accounts so that loss in one direction may be balanced by gain in another? The New York market takes, it appears, an unfavourable view of the position of the New York Central Company in spite of these adjustments, and that is not surprising for the company's capital outlay, as has just been partly

indicated, is on an enormous scale, and the working expenditure cannot be brought back to the old figure no matter what the skill displayed in "passing the cake round" may be. During the last three years the gross earnings of the company have increased by nearly £4,000,000 to £19,743,000, but less than £150,000 of this gross increase has remained as nett. Three years ago the company's nett income was $22,451,000, or £4,490,000 odd, and for the past year it is put at less than £4,618,000. It now takes nearly £360,000 to pay 1 per cent. per annum on its common stock, and the floating debt must be costly enough to carry.

An amusing story comes from New York to the effect that Mr. Stillman, president of the National City Bank, which is the pivot bank of the Standard Oil group, is going to emerge upon us as a great controller of European banks. According to the tale, he is about to sail for Paris soon to take his annual holiday, and his holiday occupation is to buy up controlling interests in foreign banks. In fact, he is stated to have been busy over this holiday amusement while he was in Europe last year, having then purchased control of "a chain of important French banks" at that time. Now he is going to increase his holdings in this direction, and will also "buy his way" into certain London banks. This is really most interesting news, but we hope Mr. Stillman will not offer to pay for all these acquisitions with Clearing House certificates. We shall want hard cash. His object, we are further informed, is "to obtain more effective control of the international money situation." That is the funniest statement of all, admirably illustrative of the brag and bounce characteristic of the credit potentates of a debtor nation who fancy themselves no end for the *rôle* of the greatest wielders of destiny on earth.

Mr. Aldrich has introduced his promised Currency Bill into the United States Senate, and it proves to be, as anticipated, merely a measure for further inflating the currency, in token doubtless of the astonishing wealth with which the Republic is bursting. There would need to be a certain amount of wealth there, because Mr. Aldrich wants additional rag-and-bond money to the nominal amount of £50,000,000, all to be lawfully created as additional note circulation. It will take the form, if the Bill passes, of National Bank notes, and will be taxed on the amount outstanding at the rate of ½ per cent. per month or 6 per cent. per annum. The security for these notes for gamblers, "mergers," and trust builders is to be credit, and credit alone, viz., Municipal and County bonds, first mortgage bonds of railways—ruling out the bonds of the street railways, which are out of favour just now—and suchlike. Railway bonds, however, cannot be accepted if emitted by companies that have failed to pay at least 4 per cent. regularly and continuously on their entire capital stock for five years. City and County bonds, too, issued by places that have wholly or partially defaulted within 15 years will be ruled out. So there really is a dim idea of demanding something better than china clay in the security. But the issue of credit upon credit Mr. Aldrich contemplates is not wholesome, and as the existing anomalous note circulation of the National banks, together with all other crooks and absurdities of the United States banking system, will be left alone, it is no wonder the nation seems to be anything but enamoured of this latest effort to demonstrate its "wealth." Good, honest business does not require help of this sort.

Money is not yet cheap in New York, although there is no longer a 10 per cent. rate quoted, but it has varied from 5 to 9 per cent. in the course of the week, and only at the close of the day are balances now and then to be found at low figures. By Thursday, however, the call loan rate had got down to 5 per cent. or less, and commercial discounts to 6½ per cent. Mr. Vanderlip, the manager of the Standard Oil National City Bank, has rather boasted in his latest circular that everything never was anything but all right. This at least is the trend of his utterance. The Central reserve cities, he said, lost about £6,500,000 of their reserves during the panic, but the banks in the interior held £20,750,000 more than their requirements. From this he argues that it was not true that the New York banks kept back money from the banks in the interior, but the argument does not seem to be quite coherent, and we should like to know why these interior banks were obliged to issue certified cheques, and to restrict cash payments to individual customers, sometimes to as small an amount as $5. Why also Clearing House certificates had immediately to be resorted to for $1 and upwards? Was it because the public would not take the discredited paper money? Have the interior banks resumed unrestricted cash payments now?

Among minor incidents of the week has been the arrest of Mr. Augustus Heinze on a charge of having illegally over-certified cheques upon the Mercantile National Bank, which was at the time in his hands, for £80,000. He has pleaded not guilty, and is out on £10,000 bail. Other arrests are said to be pending. A more tragic incident is the suicide of Mr. C. W. Whitney, a partner in the well-known New York Stock Exchange firm of Whitney and Sons, who has been prominent as a dealer in Vanderbilt stocks, presumably for the rise. Against such disagreeable incidents we must put the information that £1,200,000 in Missouri Pacific notes falling due in February, and £1,000,000 Erie notes, payable in April, have been arranged for, *i.e.*, will be renewed. Messrs. Speyer also announce that they are taking £1,200,000 of old Rock Island 4 per cent. bonds with which to refund the 4½ per cent. notes of the company issued some time ago. And the Trust companies are coming into the Clearing House, or trying to come.

Complete statistics of the failures in the United States last year have now been issued by Dun's Mercantile Agency, and show an increase in the number of 1,043, and in the liabilities of about £15,640,000. The total number of failures was 11,725, and the total liabilities about £39,500,000.

After much asseveration to the contrary, the Chicago Great Western Railway Company has been obliged to put itself into the hands of receivers, and the president of the road, or group of roads, together with Mr. C. F. Smith, of St. Paul, Minnesota, have been appointed to fulfil the duties. To us it has for many years been a marvel how the Chicago Great Western kept on its legs, but the way the public has been persuaded on one pretext or another to find the necessary capital has afforded a striking proof of the skill of the management in taking advantage of popular ignorance and credulity. The whole road, including its dependents, especially the Mason City and Fort Dodge Railroad, is not 1,500 miles long, and, exclusive of £6,000,000 of 4 per cent. gold cumulative debenture stock, whose position requires light, the capital involved is nearly £17,500,000. This Mason City and Fort Dodge Railroad has, moreover, £2,400,000 in first mortgage 4 per cent. gold bonds of its own which apparently have never been successfully placed with the investor. At any rate, an outside share-vending agency has been busy touting them by circular in recent weeks. Thus between £20,000,000 and £25,000,000 of capital, mostly British we fear, seems to be involved in this Chicago Great Western or "Maple Leaf" adventure, and it has over £2,000,000 of "notes" outstanding, several of which are becoming due either this year or next. It was ostensibly the inability to finance the renewal of some of these notes that drove the property into bankruptcy, but it was never strong; never could be strong, because it has lived on capital issues, pretexts and dodges since ever we first heard of it. That being so, it seems a pity that two men wholly unconnected with the property were not appointed as receivers, the more so as we hear from New York that there is something not quite in order about the deeds under which recent public issues have been made. Bad as things may be, however, there are assets of value, especially in and around Chicago, and the 4 per cent. debenture stock ought to be more than protected by these assets.

No indication whatever is given in the report of President Garrett on the Seaboard Air Line Railway Company's business for the year ended June 30, 1907, of the imminence of its bankruptcy. The report talks of improving prospects, of increases in gross earnings, accompanied, it is true, by decreases in nett, and of other soothing incidents. So bad, however, was the position as disclosed in the figures that on the Air Line the year resulted in a deficit of over $458,000, compared with a surplus of over $992,000 in 1905-6. Altogether this road and its small dependents—the largest of which, the Atlanta and Birmingham Air Line, is only 237 miles long—extend to 2,908 miles, of which the Seaboard Air Line proper owns 2,611 miles, and on each of these roads, except a small one, 18 miles long, the year's business resulted in a deficit. What is worse, the floating debt has been steadily increasing, and nearly £1,000,000 was added to the outstanding obligations under equipment trusts alone during the year. Within three years the total of the balance-sheet has increased by nearly £4,000,000 to almost £30,900,000, and as no addition has been made to the common and preferred stocks outstanding, while only $6,345,000 or less than £1,500,000, has been added to the bonded debt, it follows that floating obligations, such as equipment trust notes, audited vouchers, interest on advances, and debts on open account, have been bulging. No doubt the difficulty of having to finance the various floating debts, and the urgent requirements of the lines in other directions forced the thing into the hands of a receiver. In spite of the profuse expenditure, it appears to be poorly equipped, and has not increased its length of line shod with rails of 85 lbs. to the yard during the last four years. It was 40 miles in 1904 and is 40 miles now, while the length laid in 80 lb. rails is at 123 miles, two miles less than it was in 1904. An increasing portion of the system, however, is laid with 75 lb. rails, but on June 30 last there were still 686 miles covered by 60 lb. rails and 29 miles laid with old iron rails. The public here has little or no interest in this property, but it will doubtless be asked one of these days to buy some of its securities, and may just as well have facts of this kind handy. Of course, the balance-sheet shows a surplus at credit of profit and loss, in spite of the bad exhibit for the past year, but all bankrupt roads have surpluses. We might almost say the larger the "surplus" the greater the danger.

Some further particulars have been supplied by Messrs. Haskins and Sells, accountants employed by the receivers of the Westinghouse Electric and Manufacturing Company to examine into its condition. Little additional information is supplied in their report beyond what was summarised in these columns a fortnight ago, and yet there are a few suggestive items that deserve to be set down. The accountants tell us, for instance, that the $5,898,620 placed against patents represents the cost to the company of such patents as have been bought outright, the cost of patents elaborated in its own works being charged to working expenses. Nothing seems to have been written off against the patents bought, and yet that is, as a rule, one of the most wasting assets any business can possess. And real estate and buildings entered at $8,448,934 are carried in the books at cost less certain minor deductions for depreciation. It is claimed, however, that maintenance and repairs charged against income have cost on the average book value of these properties fully 4 per cent. per annum, and this is apparently considered adequate allowance for depreciation. It cannot be that, and the asset is therefore padded, but a better exhibit is made in regard to machinery, tools, and fixtures entered at $5,304,499. Maintenance and replacement, together with allowance for machinery scrapped or sold, have averaged during the past five years 30 per cent. on the book value. That the figure should still be so high indicates that the outlay in this direction must have been profuse in its extravagance.

A good deal is also said about the stocks of subsidiary companies held, and that is a most interesting branch of the subject, because it illustrates the way in which businesses of this kind are frothed up and made to display, for a time, such dazzling profits. The company has not only $4,825,000 directly invested in the stocks of subsidiary companies in the United States, but $16,448,000 sunk in foreign subsidiaries, or a total of nearly £4,300,000. Out of this fine round sum $7,595,000 has been sunk in the British Westinghouse Electric and Manufacturing Company, besides another $1,652,000 in the Westinghouse Electric Company of London, and, as we have already stated, the American company is under guarantee for more or less weighty advances made by various banks in this country to the British Westinghouse Company. These advances, however, the accountants definitely state, are to be made good out of the new issue of £300,000 in prior lien debentures of the British Westinghouse Company recently authorised by the existing debenture holders, so that by means of money thus raised the American company will be relieved of this particular liability. What good this is going to do to the share and debenture holders of the British company we cannot surmise. Altogether the display is most interesting, and several columns of this REVIEW might be filled with an account of the interlinking of company with company, the interpropping and underpinning in order that this business might seem to flourish and lick all rivals. The number of the stays, props and helps is legion. Not only have we British, French, Russian, Austrian, and Canadian Westinghouse companies, all promoted and invested in by the parent American company, but it has taken an interest in the fortunes of its customers, and has subscribed for the capital, or accepted in the way of business securities of various kinds issued by quite a number of other subsidiaries. We cannot go into all these details, but there is one curious bit of information that suggests a good deal. In order to find the security demanded by the French bankers to cover the advance sought from them towards the end of last year, the American Westinghouse Company appears to have borrowed securities from various of its dependents. For instance, $950,000 par value of assenting stock of the American Westinghouse Company was borrowed from the Security Investment Company, one of its "helps," and as guarantee for the return of this stock 100,000 preference shares of the British Westinghouse Company were "reserved." That seems to be rather a flimsy-looking transaction. As a final characteristic note it may be mentioned that $400,000 nominal, or £80,000, was bestowed upon Mr. George Westinghouse, "to reimburse him for payments made in the interests of the company to various officers, engineers, and other employees of the Electric Company, in addition to their regular salaries as paid by the company during the last ten or twelve years." The committee of the board passed this claim and allowed it to be paid in stock taken at 150 per cent. Does Mr. George Westinghouse hold that stock today? It should perhaps be added that a revision of the accounts has swollen out the total of the balance-sheet to $87,483,000, or say £17,500,000, an increase of $4,665,000, or £933,000 over the total exhibited in the previously published accounts. The American company would appear to have a large amount of money due to it, and most of this is set down as good by Messrs. Haskins and Sells. It also continues to do an extensive business, but the valuations in the balance-sheet of stocks in hand and of partly completed manufactures do not seem to be particularly reliable, and we shall, perhaps, be better able to judge of its position next year.

So far as we know, time was not given to the great financial magicians who unified the various street and other railroads of New York to trade off any of their mountains of new securities upon the public of this country. It was just as well, for the scandal and loss arising through the exposures beginning to be made of the rascalities connected with that enterprise promise to make a blacker story than almost anything of the kind recently sent to us from America. One of

these roads is the Third Avenue Railroad of New York City, and some particulars are given regarding its position, which show that it has been well-nigh ruined by having its affairs mixed up with other lines. Its receipts have fallen off, and it has been compelled to carry passengers on exchange tickets, so that its gross earnings for the year ended June 30 last were nearly $600,000 less than for the year ended June 30, 1896. The number of its passengers, including those carried on transfer tickets, has also diminished by about 2,500,000, but the number availing themselves, often fraudulently it is more than hinted, of transfer tickets has risen from upwards of 6,000,000 in 1898-9 to 16,344,000 last year. The enterprise appears to be capitalised at about $37,500,000, including prior lien bonds to the amount of $6,200,000 held by outside parties. The balance of $31,253,000 is pawned to the extent of $26,509,000, and the property has therefore neither revenue nor capital. So bad is its position, that the petitioners to the Court, from whose statements these facts are gathered, roundly declare the manner in which this street railroad is operated to involve it in an annual expenditure of approximately $1,300,000 in excess of its receipts from all sources. It is in a worse plight, if that were possible, than our London General Omnibus Company.

Passing Events.

A curious speech seems to have been delivered by Mr. Walton, Treasurer of Cape Colony, at an election meeting. His business was to defend the financial administration of his Government, and the brief report sent to the *Times* says that he did this brilliantly. Amongst the points made was one to the effect that the Government had not suspended the contribution to the sinking fund in spite of the stress of affairs and the exigencies of retrenchment. Well, small thanks to it; it has borrowed the money. If the sinking fund had been maintained and the retrenchment accomplished without the help of successive loans raised in London, Mr. Walton's defence would have been complete and unanswerable. As it is he only mocked his hearers and the colony's creditors. He, indeed, admitted that it was borrowed money that helped him through, for he proceeded to boast that the terms upon which the colony had been able to raise loans compared favourably with those of recent German borrowings. That is not saying much either.

On December 14 last the nineteenth ordinary general meeting of the shareholders in the De Beers Consolidated Mines was held in Johannesburg, with Mr. Francis Oats, a member of the board, presiding. A summary of his speech was published here at the time, and gave an impression about the future on the whole favourable. The belief that impression was meant to have conveyed has been strengthened by the verbatim report of the proceedings advertised in sundry newspapers this week. Nothing whatever in Mr. Oats's address, or in any other speech mentioned in this report, gave the remotest hint that within one week the announcement would be made that no interim dividend could be paid on the company's deferred shares. It is true that Mr. Oats dwelt upon the recent decline in the diamond-vending business, but he intimated that the buying syndicate behind the company was still absorbing the minimum quantity contracted for under the existing agreement, and prefaced this announcement by boasting that in the financial year closed on June 30 last the syndicate's purchases had exceeded that minimum by "practically £1,000,000." In short, the impression is deepened by an examination of the full report of what took place on December 14 that the skilful and calculated reticence of the cable summary was part of a well arranged campaign, and we should like to know how many shares of the company were flung upon the market by insiders between the date when the report of the meeting first appeared and December 20, when the announcement was made that no dividend would be forthcoming. As the facts stand, some explanation seems to be really necessary, for the harvest of the bears has been great.

No authorised report of the Pekin Syndicate meeting, held last Monday, has been permitted to appear. Reporters were excluded from the conclave of some 70 shareholders presided over by Mr. Carl Meyer. Garbled accounts of it, however, got into the papers, and we gather from these that there was an absence of harmony, and some slight disposition to scout, not only at the proposals laid before the meeting, but at the talented chairman himself. How far these statements are accurate we cannot say, and it is unnecessary to dwell on this side of the subject. Apparently the object of the meeting was to pave the way for a rearrangement of the capital. At present this consists of 1,500,000 Shansi shares of £1 each, 39,900 Pekin ordinary shares of £1 each, and 2,000 deferred shares of a shilling each, making £1,540,000 in all. It is proposed apparently to shuffle this capital around and exchange it into 895,000 5 per cent. preference shares of £1 each and 2,580,000 ordinary shares of 5s. each. Added up, the nominal amount of these two classes of new shares is exactly the same as that of the existing capital, but the deferred shares are apparently going to get no better treatment, whatever that treatment may be, than the holders of the Shansi shares, and at this there was grumbling. We are like Mr. Meyer, if he is correctly reported, and "do not care for deferred shares at all," but their holders can make themselves troublesome.

A correspondent obliges us much by supplying the following interesting information:—"I have only just noticed in reading over a second time your issue of December 28 (on page 805), you speak of the Rouvier Bank of Paris as 'a new or private affair.' It is not often one can tell you anything you don't know, but I believe it is a fact that the 'Banque Française pour le Commerce et l'Industrie' (capital paid up 60,000,000 frs.) is known familiarly in Paris as Rouvier's Bank. I understand that M. Rouvier, formerly French Minister of Finance, is either chairman, or, at any rate, the ruling spirit. Apart from your interesting announcement as to the Russian Bank of Commerce, I believe (as you probably know) [We did not.—Ed.] that during the past year this French bank took up an interest in the Credito Italiano and the Banque Internationale de Bruxelles, and is represented on the board of both companies. It also took a considerable interest in the Bank of London and Peru, and introduced these shares to the Paris Bourse."

An estimate of the Western Australian harvest has reached us from Mr. Malcolm Fraser, the Government statistician at Perth, and it is highly encouraging. The yield of wheat per acre is expected to exceed 12,000,000 bushels, against 11,000,000 the year before, and as the area sown has gone up by nearly 38,000 acres, it follows that a crop of 3,429,000 bushels is looked for compared with 2,759,000 bushels in the harvest of the season 1906-7. Oats also promise well with 17.8 bushels to the acre against 16.1, and a total crop of 516,000 bushels. Although the land under hay has fallen off by nearly 10,000 acres, the crop is expected to be larger than it was last year. Altogether this is an encouraging story, and in a very short time now we should be receiving the actual figures which, we hope, may fully confirm the estimates.

What is called the ninth interim report has been issued by the committee of debenture holders in the Beira Railways. It does not give information, but promises to do so when Mr. Frederick Walker's report has been issued, or rather as soon as important pending negotiations have been concluded, which the committee hopes will be within a few weeks. Mr. Walker has recently returned from his visit to Rhodesia, and his statement has apparently been laid before the committee, who in this circular say that, although in some respects disappointing, in others it is distinctly encouraging, and on this ground the members ask to be supported with "a little further patience." That is reasonable enough.

We do not relish the announcement made by the London Finance Committee to the effect that the "notes" issued by the Chicago Great Western Company "rank ahead of the debenture and other stock," and think that the holders of the 4 per cent. debenture stock ought to see that an independent examination is made into the terms upon which these notes were issued. Including £246,000 of the Car Trust certificates, the total floating debt of the company in this form is nearly £2,190,000. It is all very well to say that the London Committee will "proceed to recommend the creation of a mortgage upon the undertaking (which at present has no mortgage upon it), in order to provide for all the notes and such necessary capital expenditure as can be foreseen," but this treatment of the holders of the 4 per cent. debenture stock issued in March last will not serve the company's best interests. What we, therefore, want to know is whether the deeds under which the notes are constituted a direct obligation ahead of the debenture stock are valid or not. Even if they prove to be, will the Finance Committee be justified in placing further capital demands ahead of that stock?

Critical Index to New Investments.

India 3½ per Cent. Stock.

Subscriptions will be received by the Bank of England for an issue of £5,000,000 India 3½ per cent. stock at the fixed price of 99 per cent. The issue is made under the provisions of the East India Loans (Railways) Act, 1905, and other Acts, in order to provide funds for State railway construction, for granting advances to Indian railway companies, for the discharge of certain debentures issued by the Indian railway companies, the interest and principal of which are guaranteed by the Secretary of State. It will be consolidated with the existing 3½ per cent. stock now existing, which is not redeemable until January 5, 1931, but will be repayable at par on or after that day on one year's notice. The price is payable by instalments of 5 per cent. on application, 19 per cent. on January 22, and 25 per cent. each on February 19, March 18, and April 15, but a full quarter's interest will be paid on April 5 next.

Cape of Good Hope Consolidated 3½ per Cent. Stock.

Another Cape loan has made its appearance this evening. It is issued by the London and Westminster Bank as bankers for the Government of the Cape of Good Hope, and amounts to £1,020,700 in 3½ per cent. stock offered at 93½. When fully paid up it will be consolidated with the existing £14,416,874 of 3½ per cent. stock, and when added to the total debt of the dependency will bring its aggregate up to more than £54,000,000, for in addition to the 3½ per cent. stock there are a large number of other loans going to form this total. The first six months' interest is payable on July 1 next, and the last instalment on this share is due on April 27, so that there is a slight advantage to the subscriber over and above the issue price, and on and after January 20 the amount subscribed may be paid up in full under 3½ per cent. discount. Of the money apparently about £720,700 will be spent on new and additional railway works, £100,000 on local works, and £200,000 on irrigation works.

City of Wellington Loan, 1907.

The Union Bank of Australia is instructed by the liquidator of the City of Wellington Electric Light and Power Company, Limited, to invite applications for £147,300 of 4 per cent. debentures. These bonds form part of a total loan of £160,000, which was issued for the purpose of purchasing the undertaking of the company in New Zealand, and is repayable at par on July 31, 1932. Principal, interest, and sinking fund of £3,000 and other charges are secured on an annual special rate of one farthing in the £ on the rateable value of the city of Wellington as it was constituted prior to April 1, 1907, which will yield an annual sum of £10,147, but the Corporation has power to increase the special rate, if necessary. According to official statistics, the population has increased from 29,075 in 1899 to 55,052 in 1906, and the rateable value from £308,666 to £810,870, while the indebtedness, less sinking fund, is £1,641,567, against assets of the estimated value of £1,650,335. The price asked for the bonds is par, payable 5 per cent. on application and 95 per cent. on January 20, but a full six months' interest will be paid on January 31. Even so, the bonds are at best a second-rate investment, therefore not cheap enough.

Tootal Broadhurst, Lee Co., Limited.

A very straightforward-looking prospectus has been issued by this old Lancashire cotton company. Its object is to announce an issue at par of 19,500 £10 5 per cent. cumulative preference shares, and it explains that the money is required because of the rapid expansion in the business. This has more than doubled during the past nine years, and profits have also risen in an apparently corresponding degree, as the averages set forth indicate. For the eight years ended June 29 last the average profit was £42,017 per annum, but for the last five years ending at the same time it was £50,336 per annum, and for the two past years also ending on June 29 the figures were £76,786. As the charge involved to pay 5 per cent. on the entire preference capital of £400,000 is only £20,000 per annum, it follows that the average profits for the past eight years have been sufficient to pay that dividend twice over. All the ordinary capital of the company, amounting to £669,180 in £10 shares, was originally taken, and continues to be held by the original partners. It may be added that the total authorised share capital is £1,200,000, and that there is in addition £300,000 in 4 per cent. debentures, but the whole of the share capital will not have been issued even after these new preferences have been placed, since the issued ordinary capital is only as above, and of that only £401,508 has been paid up. When the company was formed in 1888 the capital was put at £1,000,000, and the additions since made have to some extent, if not wholly, been provided out of profits, as is explained in the prospectus. A sum of money voted to the directors and managers out of the profits in consideration of past and future services was treated in the same way, retained in the business by being used to take up shares. The balance-sheet valuation of the lands, buildings, and machinery is only £350,789, whereas the valuers, Messrs. Rushton, Sons and Kenyon, put the total at £433,927. It is not such an extended balance-sheet, however, as we should like to see, but that is really about the only criticism we can offer.

Penmans, Limited.

This is a Canadian business of makers of knitted underwear, blankets, &c., established in 1870, and converted into a limited company in 1906, with a capital of $4,000,000, divided into $1,500,000 6 per cent. cumulative preference, and $2,500,000 common shares. Of these $1,000,000 preference and $2,000,600 common shares have been issued, and subscriptions were this week invited for $1,500,000 5 per cent. first mortgage gold bonds, of which $1,166,000 were offered on behalf of present holders and $334,000 on behalf of the company. The price asked was £97 10s. for each $500 bond, with a full six months' interest, payable on May 1, but a certain outside broker was busy for some time before the public issue was made offering them to his clients at a further discount of £1 per bond. A letter from the president of the company professes to show its position, but the figures given are those at December 31, 1906, and are therefore of no present value. It may be noted, however, that out of total assets valued at $5,796,611, goodwill, trade marks, &c., account for no less than $2,171,664, or about seven times the average annual profits for the four years to December 31, 1906. Sales in that year were

some $38,000 larger than in the preceding twelve months, but nett profits, nevertheless, fell off by $49,000. It is stated that the company had a free working capital in the shape of an excess of liquid assets over trade liabilities of over $1,100,000, but if that is the case, why are the holders of the bonds so ready to part with them at £97½ or under?

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

T. C.—(1) Yes, a further rise is probable. (2) The same answer, only in both these stocks the approach of the settlement is sure to cause realisation to snatch profits. Buy only in a flat market. (3) It seems a pity to sell, but holders of this stock run great risk of having to pay an assessment before all is over.

Alpha.—Not worth touching under present conditions in the trade.

Ryland.—Somewhat risky. You would be safer to buy a good debenture yielding a lower rate of interest than that offered by this institution.

F. E. D.—(1) Rather speculative, but should be safe enough. (2) These might be worth picking up in the present condition of agricultural affairs in that country, although the days of phenomenal dividends would appear to be over. (3) Good of their kind, and as a speculation a small purchase might be all right. (4) Hardly worth while, we fear, as market is subject to too much manipulation to be safe for an outsider. These answers leave you in our debt to the extent you mention.

F. J. D.—(1) These shares appear to have been issued privately, and are now practically unrealisable. We have seen no accounts for a long time. Not worth touching on their apparent position. (2) We cannot discover a price for these. The company appears to have had considerable trouble in raising its capital, and had to resort to offering bonus shares. Work has been commenced, but we do not think the company is one to take an interest in. The balance now to your credit on deposit account is 19s.

B. W. J.—(1) We did *not* recommend the issue, but still think there should be "margin enough" if no hidden frauds have to come to light. So do not sell in a hurry. (2) In the present temper of the markets here and abroad we should hold on awhile, especially as the company has one or two promising eggs in its basket.

Mallow.—The general outlook seems rather better, and, on the whole, we think you should not sell just now.

T. C. W.—(1) We are afraid there must be a scaling down of interest, for a time at least. Better wait for the new stock. (2) Not if you have a profit, but otherwise you might hold on for the present. (3) These are quite good to hold.

Rion.—(1) We think the fears about the future exaggerated, and this company is in the first rank of its class. At the same time, if you can get out without loss, it might be prudent to do so, as the trend of prices for this kind of security is at present downwards. (2) This business is most energetically managed and first-class, and the preference shares ought to be well covered, whatever happens. (3) This company has also been doing a fine business lately, but we fear the best of the trade is nearly over for the present, and it might be prudent to sell. These answers and the letter leave 1s. to your credit on deposit account.

W. A. P.—We are very sorry, but we cannot pronounce on all these securities for 1s.—it would be less than a jobbing gardener's wage—but, of the five you name, the third offers perhaps the best chance under both heads.

Enquirer.—You also have not complied with our rules in asking about four securities as two questions. We may say, however, that either No. 1 or No. 3 should suit you. No. 4 is quite speculative, but the outlook is a little more favourable, and if you do not mind the risk a small purchase might be made.

Nemo.—(1) The shares may go up a little on the favourable harvest, but, on the other hand, there is the continuous outpouring of new capital, which will take time to become remunerative. Still, the shares should be a very fair investment at the price named. (2) The shares seem to be well covered, and are a good purchase. (3) A promising speculation, as the price is at a low level. These answers exhaust your balance on deposit account.

Balances in Exchequer:—	£	£		
Bank of England	1,320,533	1,143,632		
Bank of Ireland	429,099	483,072	1,750,232	1,626,704
Total			119,968,496	122,244,255

Note.—The Revenue and Expenditure figures for 1907-8 have been adjusted to give effect to Section 17 (5) of the Finance Act, 1907 (7 Ed. VII., cap. 13), with respect to Local Taxation Grants, and the figures for 1906-7 have been similarly adjusted for the purpose of comparison.

Mem.—Treasury Bills outstanding on January 4, 1908.—

Bills issued by Public Tender	£13,213,000
Bills otherwise issued	2,500,000
Treasury, January 7, 1908. Total	£15,713,000

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending January 5, 278,000 poods, equals 4,482 tons.

Baku Russian Petroleum.—Production of crude oil for week ending 4th inst., 242,000 poods, equals 3,901 tons.

Capital and Counties Bank.—Liabilities on January 1, consisted of £33,962,022 on simple contracts and £339,406 on bills, and assets of £5,498,786 cash in hand and at Bank of England, £5,077,914 money at call and short notice, £4,916,019 Consols and other investments, and £19,843,882 bills of exchange, promissory notes and advances to customers.

Messrs. J. Henry Schröder and Co. have received a cable from their Santos agents advising them that they have further encashed £20,750 in respect of the surtax collected weekly, for the service of State of San Paulo 5 per cent. Exchequer bonds, making a total of £510,500 encashed since August 1.

TRADE AND PRODUCE.

WHEAT.—Firm and quiet have been the markets this week. Full prices have been paid for all wheat, spot and future, spot parcels having gone up about 1d. since the end of last week, and futures, though they fluctuated a little for a day or two, also closed a little dearer. English wheat has been in fair supply and from 3d. to 6d. dearer, farmers' deliveries coming in to the market in better condition than at first, and probably if they had restricted their offerings then the average price obtained would have been higher still. Last week they amounted to 28,598 qrs., averaging 35s., against 24,550 qrs., averaging 26s. a year ago. From abroad supplies are again larger at 411,087 qrs. against 409,080 qrs. in the same week of last year, and the quantities of wheat and flour on passage to the United Kingdom are estimated at 2,310,000 qrs. against 2,145,000 last week. To the Continent, on the other hand, they are less, being only 980,000 qrs. against 1,020,000 qrs. American markets on the first days were active enough, but depressed, and only revived on Thursday, under firm cables and the poor weather reports from the Argentine.

WOOL.—A further improvement has taken place since last week, and more confidence is shown in the market. Earlier in the week business was good, especially in crossbreds, but later on was checked by the upward movement in prices, and crossbred tops and merinos are now fully 1d. higher than a week ago. Spinners bought freely at first, realising that values would not go down again at once, and in many instances being too short of material to wait, but now there is a tendency to hold off for a little. They have plenty of contract work in hand, but are not making many new ones, as merchants do not care to speculate much till they feel a little surer of the position. English wools have not moved so much as colonial, and while they are a little more firmly held, higher prices have not actually been made. Orders to manufacturers are coming in a little more freely, but the improvement is not rapid, and buyers show no disposition to give large orders.

COTTON (from our Manchester correspondent).—The demand in our market this week for yarn and cloth has been on a comparatively small scale. A quiet tone has prevailed in most sections. Buyers have not been stimulated to act with any freedom. The raw cotton situation does not show much improvement. Prices keep steady, the fluctuations not being important. Very little fresh news relating to the prospects for supply is coming through. The wages dispute in the spinning department has been the subject for considerable discussion. The market, as a whole, however, has not yet looked upon the situation as serious. Things are drifting, however, and notices will begin to be handed in next week. It is generally thought in well-informed circles that some arrangement will be come to and that there will be no stoppage of the machinery. Both sides, however, are maintaining a firm attitude. In piece goods for export only small sales have transpired for all markets. Shippers to our leading outlets are not receiving advices which encourage them to anticipate future requirements. The various markets of India are slow, and some rather discouraging reports have just been received relating to clearances. Stocks are fairly heavy in both Bombay and Calcutta. It is feared that the famine in our Dependency will adversely affect the turnover in piece goods. Some improvement in the price of silver has brought a little more inquiry for China, but not much has been done so far. The Mediterranean outlets are quiet on the whole, but here and there small sales have been put through in goods of a miscellaneous character for the Levant. The home trade has been very quiet. Buying in light fancy goods for the spring is on a comparatively small scale. Many retailers, it is understood, had rather heavy stocks at the close of last summer. More Burnley manufacturers are going on short time. No organised movement has yet been arranged, but individual firms are restricting their output. In T-cloths and Mexicans the demand has been slow. Stocks are accumulating rather rapidly in first hands. Coloured woven goods and sateens have dragged in demand. American yarns for home consumption have been rather easier in price when tested. Only a quiet demand has been met with, and the production of the spindles has scarcely been sold. The all-round supply is increasing. Spinners are not so difficult to deal with as some time back. In shipping yarns small lines have been mentioned for the Continent, but no free buying has occurred. Two-fold descriptions are rather easier when tested. Bolton yarns have continued to lose ground, and much earlier delivery can be secured than was thought likely a few weeks ago. According to Sir Jacob Behrens and Sons' report, the possibility of a lock-out among spinners at the end of the month has not had the slightest effect upon demand. Requirements for distant delivery are left to look after themselves, and no attempt is made to provide against a possible shortage of supplies should the threatened lock-out actually take place. Some spinners seem to favour such a possibility, being of the opinion that without a decided curtailment of the production in the immediate future margins cannot be maintained.

COAL.—If the severe cold had continued without a break prices of house coal would in all probability have gone up, but the switchback performances of the temperature have so far prevented this, and they remain stationary at a figure which even most coal-burners regard as high enough. Steam collieries are very busy, and an all-round improvement is noticeable in them. Foreign demand is better again. Welsh exports for the week have been large, and prices in most places have stiffened. Even furnace coke is a little dearer.

COPPER.—Firm cables, [illegible] covering sent prices up, and three [illegible] £63 10s., but after that [illegible] in, speculative support was absent and [illegible] adverse. Thursday showed a [illegible] at £62 2s 6d cash and £62 1s three [illegible] the market was steady, cash 62½, three [illegible]

TIN.—Values rose to £122 10s cash and £123 [illegible] on Monday, and showed a tendency [illegible] on the firm attitude of [illegible] by considerable fluctuations and weakness, [illegible] closing prices rallied from the lowest at £122 10s cash and £123 10s three months. On Friday the [illegible] foreign, cash, £122-£122 5s, three months £124-£124 5s.

IRON AND STEEL.—The trade of the week has [illegible] promise of immediate recovery. Inquiry [illegible] is of no account, and prompt deliveries are smaller than ever. Prices also have again moved down, Barrow mixed Bessemer numbers selling at 66s., while East Coast have dropped as low as 66s., and sellers are inclined to make [illegible] still to get orders. Forward inquiries [illegible] few, and actual business passing is smaller than it has been for some weeks; but the situation in Cleveland is considered better, prices are steadier, and the lessening of production at last seems to be checking the downward movement. That they may fall another two or three shillings is generally expected, but with the cost of production so much cheaper a profit [illegible] even at the lower rates. In the steel trade very little is doing, and a further reduction has been given by [illegible]

TEA.—The year opens well, with the prospect of a [illegible] period of prosperity for the majority of [illegible] W. J. and H. Thompson in their circular, for the total consumption of British-grown tea is still on the increase, in spite of the high prices prevailing for the lower grades. Undoubtedly the most satisfactory feature of the past twelve months' trading is the large increase of Russian business, following as it does the abnormal development of 1906, and the figures bear testimony to the great hold which Indian and Ceylon teas have secured on popular favour at the expense of their rival, China. Indian auctions comprised 39,183 packages, a moderate supply which met with good bidding for everything up to 8½d., but without any change in prices ruling before Christmas. 37,057 packages were sold on garden account, averaging 8.32d. per package, against 8.07d. a year ago. Accumulations over the holidays resulted in very heavy offerings of Ceylon teas—36,614 packages in all—and it was not surprising therefore that prices were a trifle irregular, although no general fall in values took place. The chief demand here was also for teas up to 8½d., nothing practically being obtainable under 7½d., and the average for the week was 8.35d., against 8.41d. in 1907. Java sales of 1,571 packages with one or two exceptions passed at steady rates.

SUGAR.—Mr. Czarnikow's weekly circular quotes May beet [illegible] fluctuating from 10s. 3½d. to 10s. 4½d. to 10s. 1½d. to 10s. 2d. Very severe frost on the Continent closed inland navigation and created some demand for actual sugar. At the same time growers' estimate of their cane in the fields in Cuba as sufficient to make up 1,165,000 tons was interpreted to mean a maximum production of 1,100,000 tons, previous estimates of productions never having come up to the estimated quantity. Such production might lead to beet imports into the United States next summer, but that depends, of course, on Java shipments, and meantime the Continent seemed not inclined to follow a further upward move. The sudden thaw brought more tenders, and depressed ready granulated from 11s. 8¾d. to 11s. 6d. The Cuban planters are getting slowly to work, 70 against 151 centrals grinding at the end of last week, the receipts being 9,000 against 31,000 tons. Statistics for December seem to shape fairly well, continues the circular, the French exchequer receipts point to deliveries of 54,000 against 46,000 tons, the official consumption in the United Kingdom is slightly over last year's, though the calculated figures do not quite agree with it. The German exports are surprisingly large at 30,000 against 137,000 tons, [illegible] 56,000 against 40,000 tons between December 20 and 31. German figures have not always been reliable in former times, but nevertheless as declarations they may be correct, because the Hamburg arrivals for four weeks were 86,000 against 87,500 tons, and 27,000 tons were exported from Stettin in December. However, part of the sugar has not disappeared, as Hamburg and the United Kingdom stocks increased 32,000 tons more than last year. The Austrian production excluding Hungary for December was 196,400 against 180,000 tons; exports 67,000 against 55,000 tons; consumption 30,000 against 30,000 tons. The American market has shown increased confidence, with an advance to 3.02½ cents for 96 centrifugals, but during the last day or two has been [illegible] there, and refiners will purchase [illegible] reliable figures become available as to the prospects of the Cuban crop. Landings in the three ports for the week were 10,000 tons and meltings 24,000 tons, [illegible] tons.

Messrs. Price, Waterhouse, and Co. have opened [illegible] Cairo, at Savoy Chambers. The resident partner will be Mr. Frederick G. Bonham-Carter, A.C.A.

In answer to an inquiry cabled by the Central Uruguay Railway Company, the following telegram was received from Monte Video on January 8, 1908:—"Wheat crop is being harvested and is absolutely safe. Maize crop no damage yet done. Large quantities of locusts, but effective efforts are being made to exterminate them in all agricultural districts."

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for the 10 days ended Dec. 31, $4,001, increase $385; aggregate from July 1, $137,717.

Argentine North Eastern. — Traffic receipts for week ended December 6, £3,193, decrease £515; aggregate from July 1, £67,107, decrease £4,965.

Assam Bengal.—Traffic receipts for week ended December 7, Rs. 76,226, decrease Rs. 5,600; aggregate from July 1, Rs. 22,35,523, increase Rs. 1,30,452.

Bilbao River and Cantabrian.—Traffic returns for November, £9,071, decrease £2,123; aggregate from January 1, £100,047, decrease £12,676.

Buenos Ayres Central.—Gross receipts for December £9,952, decrease £1,355; aggregate from Jan. 1, £132,935, increase £10,966.

Canadian Northern Railway.—Traffic receipts for 10 days ended Dec. 31, $235,900, increase $64,200; total from July 1, $5,307,900, increase $1,391,800.

Egyptian Delta.—Traffic receipts for week ended December 21, £6,569, decrease £212; aggregate from January 1, £198,490, increase £19,289.

Lucknow Bareilly Railway.—Traffic receipts for week ended December 7, Rs. 24,549, decrease Rs. 4,217: aggregate from July 1, Rs. 6,01,070, increase Rs. 11,466.

Midland Uruguay.—Receipts for month of December, £6,808, decrease £564; aggregate from July 1, £37,185, increase £2,570.

North Western of Uruguay.—Traffic receipts for Dec., $17,600, decrease $3,304; aggregate from July 1, $121,864, increase $22.

Quebec Central Railway.—Traffic receipts for the 4th week of December, $26,763, increase $4,506; aggregate from January 1, $1,012,221, increase $107,368.

Quebec and Lake St. John.—Traffic receipts for Nov. $63,585, increase $909, aggregate receipts $600,261, increase $54,603.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended December 7, Rs. 15,506, decrease Rs. 2,618; aggregate from July 1, Rs. 4,97,158, increase Rs. 36,509.

Uruguay Northern.—Gross receipts for month of Oct., £2,235, increase £923; aggregate from July 1, £7,502, increase £802.

White Pass and Yukon Railway.—Traffic receipts for week ended December 31 amounted to $3,560.

English.

Cleator and Workington Junction.—Receipts for 4 days ending January 4, £333, decrease £527; aggregate from January 1, £333, decrease £527.

Cockermouth and Keswick Railway.—Receipts for 4 days ending January 4, £386, decrease £144; aggregate from January 1, £386, decrease £144.

East London Railway.—Traffic receipts for October, £3,892, decrease £546.

East and West Yorkshire Union Railways.—Traffic receipts for four days ended January 4, £394, decrease £19; aggregate from January 1, £394, decrease £19.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Bath Electric.—Traffic receipts for week ending January 1, £637, increase £7; aggregate from Jan. 1, 1907, £41,176, decrease £1,945.

Blessington and Poulaphouca.—Traffic receipts for week ending January 1, £5; aggregate from July 1, £523, decrease £61.

Bristol Tramways and Carriage.—Traffic receipts for three days ending January 3, £4,538, decrease £92; aggregate from Jan. 1, £4,538, decrease £92.

British Electric Traction.—Receipts of all the Associated Companies for the week ending December 27, £31,121; 427¼ miles.

Burnley Corporation.—Traffic receipts for week ending January 4, £1,227, increase £22.

Dublin and Blessington.—Traffic receipts for week ending January 1, £98, increase £2; aggregate from July 1, £3,848, decrease £97.

Dublin and Lucan.—Traffic receipts for 3 days ending January 3, £38, decrease £17; aggregate from Jan. 1, £38, decrease £17.

Dublin United.—Traffic receipts for 3 days ending January 3, £2,046, increase £9; aggregate from Jan. 1, £2,046, increase £9.

Edinburgh and District.—Traffic receipts for week ending December 28, £4,918, increase £542; aggregate from January 1, 1907, £257,110, increase £2,644.

Hastings and District.—Traffic receipts for week ending January 2, £746.

Isle of Thanet.—Traffic receipts for week ending January 4, £199, decrease £16; aggregate from Oct. 1, £4,108, increase £166.

London County Council.—Traffic receipts for week ending December 28, £31,615, increase £8,075; aggregate from April 1, £1,225,166, increase £205,246. Miles 115¾, against 115.

London General Omnibus.—Traffic receipts for four days ending January 4, £16,588 decrease £1,893; aggregate from Jan. 1, £16,588, decrease £1,893.

London Road Car.—Traffic receipts for four days ending January 4, £5,094, decrease £1,148; aggregate from Jan. 1, £5,094, decrease £1,148

London United.—Traffic receipts for four days ending January 4, £4,966, decrease £69; aggregate from January 1, £4,966, decrease £69.

Provincial Trams.—Traffic receipts for week ending January 4, £1,453, decrease £19; aggregate from Oct. 1, £20,859, increase £915.

Rossendale Valley.—Traffic receipts for week ending January 3, £170, decrease £6.

Sunderland District.—Traffic receipts for week ending January 1, £524, increase £263; aggregate for 9 weeks £4,227, increase £709.

Yorkshire (West Riding) Electric.—Traffic receipts for five days ending January 5, £1,020, increase £37; aggregate from January 1, £1,020.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending January 7, £18,778, increase £891; aggregate from January 1, £18,778, increase £891.

Auckland Electric. — Traffic receipts for four weeks ending December 6, £11,788, increase £1,463; aggregate from January 1, £126,351, increase £6,464.

Brisbane. — Traffic receipts for month of December, 1907, £15,328, increase £1,829.

British Columbia Electric.—Nett earnings for November $86,047, increase $30,272. Aggregate nett earnings, including income from investments from July 1 to Nov. 30, $407,476, increase $117,168.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for 8 days ending January 7, £862, increase £1,465.

Calcutta. — Traffic receipts for week ending January 4, Rs. 54,460, decrease Rs. 16,336; aggregate from January 1, Rs. 54,460, decrease Rs. 16,336.

Cape Electric.—Traffic revenue for month of November, Cape Town, £9,826; Port Elizabeth, £2,797.

Carthagena and Herrerias.—Traffic receipts for the month of December, £3,254, decrease £2,252; total from January 1, £51,131, decrease £1,396.

Geneva Trams.—Earnings for November, fr. 188,351; increase fr. 8,024.

Kalgoorlie Electric.—Traffic receipts for November, £3,790; aggregate from January 1, £43,715.

Lisbon Electric.—Earnings for November, milreis 46,117.

Madras Electric.—Traffic receipts for fortnight ended December 31, Rs. 20,285, increase 14 per cent.; aggregate from January 1, Rs. 4,16,750, increase 19½ per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for December, £49,000.

Mexico.—Nett earnings for month of September, $203,525, increase $21,796; aggregate nett earnings from January 1, $1,545,283, increase $93,126.

Perth (W.A.) Electric. — Gross receipts for week ended January 3, £1,745, decrease £198; aggregate from January 1, £741, decrease £67.

Rio de Janeiro.—Nett earnings for November, $213,640; aggregate from January 1, $1,951,966.

Sao Paulo.—Traffic returns for November: nett earnings, $117,773, increase $12,773; aggregate from Jan. 1, $1,227,786. increase $53,527.

Twin City Rapid.—Traffic receipts for the month of October, $515,177, increase $41,356; aggregate from January 1, $5,055,450, increase $364,192. Nett traffic receipts, $259,590, increase $12,205; aggregate from January 1, $2,619,426, increase $105,653.

The Investors' Review.

The Week's Money Market.

BANK RATE 6 PER CENT. (Reduced from 7 per cent. on January 2.)

Norfolk House, Friday Evening.

Most welcome was the reduction in the Bank rate to 6 per cent. last week, but it only set the market grumbling that the Bank had not gone down before and working for a reduction to 5 per cent. this week. We trust there will be no hurried progress in this direction, in spite of the fine exhibit made by yesterday's Bank return. It shows that the market was able to pay off £13,044,000 on other securities, still leaving £45,081,000 at the credit of other deposits, these being down only £7,577,000 on the week. That this large mass of credit should remain after the repayment of the whole of the short loans obtained from the Bank at the end of the year, as well as the liquidation of debt on bills falling due, is in part accounted for by the increase of £2,800,000 in the reserve, of which increase £2,228,000 is due to coin and bullion, no less than £1,307,000 in coin and £572,000 in notes having returned from the internal circulation. In addition to this £921,000 nett in gold came from abroad. Then the Government deposits are £2,291,000 less, thanks to the distribution of the January dividends and other end-of-the-year disbursements. In these ways the market was put in funds to the necessary extent, but it is now poor, and still owes the Bank a large sum on bills, falling due mostly this month, so that credit jobbers will be worsted in playing for too cheap money. They must not forget that some millions of the total shown on other deposits belong to the Japanese Government, forming credit outside market control. Take away this Japanese money, and the market would find itself in poverty.

What cheered the City up a little in its disappointment at the caution of the Bank of England was the news that the Bank of France had knocked ½ per cent. off its rate, bringing it down to 3½ per cent. This was done in defiance of the position of the open Paris market, the discount rate in which was 4⅞ per cent. on Wednesday. The figures of the Bank likewise give little support to the movement, for although notes in circulation have declined £3,356,000 the total outstanding is still £199,321,000 against gold in hand to the value of £106,973,000, gold having decreased £74,000 on the week.

The news of the action of the Bank of France would have had more influence in exciting our market's disappointment had it been earlier known, but the cables between London and France were all interrupted, so that neither telephonic nor telegraphic communication with that capital was possible most of the day, and the earliest intimation of the change seems to have reached the City *viâ* New York, one firm, at least, having received a message from its Paris agent through New York within ten minutes of its dispatch.

A prompt rally in the Paris exchange took place on the reduction in the French Bank rate, accompanied as it was by the weakness in our market. The position is also improving a little in Germany, and the excess circulation of the Reichsbank is now only £19,339,000 against £31,299,000 last week. But the figure still indicates unusual stress. However, cash in hand has increased by £2,725,000 to £37,934,000, and the note circulation is down £6,510,000, while the contraction in loans, &c., has been no less than £19,158,000. But the fact that large Prussian and German loans are hanging over the money market must prevent confidence in the future. Elsewhere money is growing dearer. The Indian rice crop available for export is said to be about 2,500,000 tons, and as a considerable amount will be required to move that to Europe the outlook there is for dearer money. Both the Banks of Bengal and Bombay, for example, have this week raised their minimum rates of discount to 8 per cent., and in Europe the small Bank of Portugal has gone up from 5½ per cent. to 6, and even the greater ease of loan rates in New York still leaves the discount rate there on commercial paper at between 6 and 7 per cent. Our market, however, has made up its mind that money is going to be easy for some time to come, and has all week worked quotations down. Last Monday the rate on three months' remitted bills was almost 4⅞ per cent., and some houses quoted that rate, and also 5 per cent. Six months' bills were also 4½ to 4⅝ per cent. in the beginning of the week, but yesterday the three months' rate was put down by some people to 4½-$\frac{9}{16}$ per cent., although the more conservative traders quoted 4⅝-¾ per cent. Six months' bills came down to little better than 4¼ per cent., and yet money for a week could not be had below 4¼ per cent., although it has not been above 4½ per cent. any day this week. Call money has often been as dear, and to-day rose to 4¾ per cent.

This morning the discount market began by taking three months' remitted paper at 4½ per cent., but soon stopped, the supply proving too much for it, and the rate hardened to 4⅝ per cent., in spite of the fact that the French bought bills at 4$\frac{7}{16}$ per cent. Long usances were also harder at 4⅜ per cent.

What are the prospects of gold movements? So far as we can judge, they do not promise much accumulation at the Bank of England unless our abstention from

recommitments in United States finance compel New York banks to return the gold lately shipped thither. Apart from that we must still reckon with foreign demands of considerable magnitude. The promised Argentine purchases have begun, and £250,000 has gone to South America up to this evening. Furthermore, there is that £3,500,000, there or thereabouts, to be paid back to the Bank of France next month, and although it is quite possible that the Bank may be willing to renew the cash advanced, or a portion of it, our market will do well not to count upon that makeshift because of the necessities of the French Government, which has considerable amounts of floating debt falling due soon for renewal, as well as a large advance to provide for Russia. To be sure, there is the credit given to the German Government by Paris at the end of the year to come back, but Germany is no more able to repay that debt in gold than we are, for the circumstances of the Reichsbank are still far from favourable.

On Monday next about £600,000 in gold will be available in the open market, and as the price is 77s. 9d., without any indications of foreign competition, the Bank will probably get the greater part of this. The *Kinfauns Castle* has left the Cape this week with £934,708 on board for London.

SILVER.

Sellers held off the market for some days in the beginning of the week, and although business was on a small scale, prices crept up to 25 13/16 per oz. for cash and 26d. per oz. for delivery two months forward. Supplies of spot metal were small, and on Tuesday the market was taken unawares by large orders to buy "at best," which came from the bazaars and the Continent. Quotations consequently were hoisted to 27d. and 27 3/16d. per oz., a rise of 1 3/16d., or the largest movement on any one day for many years. The rush, however, brought out considerable quantities, China especially being keen to sell, with the result that 3/8d. of the rise was lost before the close of business, and a further relapse has taken place daily until to-night's values are back to 25 5/8d. and 25 9/16d. per oz. Applications for the Rs. 50,00,000 of Council drafts on India on Wednesday amounted to Rs. 1,42,85,000 in bills and Rs. 80,00,000 in telegraphic transfers. The amounts allotted were Rs. 32,90,000 in bills and Rs. 17,10,000 in transfers, tenders at 1s. 3 29-32d. and 1s. 3 15/16d. per rupee respectively, receiving about 21 per cent. Next Wednesday Rs. 60,00,000 will be offered.

The Stock Markets.

An assuagement of the adverse conditions surrounding money markets here and abroad was to be expected at the New Year, and it has come. Are we, then, clear of all our troubles, able to look forward with confidence to a steady improvement in financial and mercantile affairs? We hardly think so, although it be true that our markets have shown a splendid resisting power throughout the complications and dangers threatening at the end of the year. But we have still to reap the fruits of the recent confusion and distress, and a trade reaction is due, has already begun. The very eagerness with which New York is setting to work to raise prices in all directions, and to disseminate favourable news about business prospects, ought, therefore, all the more to be a warning to people here to keep clear of renewed commitments in that quarter. If the financiers of Wall Street succeed in raising prices and keeping them up, holders in Europe of speculative classes of American securities ought still to take the opportunity to sell.

At home, too, we have already had significant notice that all the spare capital available will be wanted by borrowers of every class. The week has seen a loan of £5,000,000 for the Indian Government and of £2,000,000 for the Buenos Ayres Great Southern Railway, besides minor issues, legitimate enough in themselves, but evidence of the pressing necessities forcing communities and business houses to ask for more capital the moment money market circumstances appear to change for the better. We do not deprecate the buying of good securities. On the contrary, it has all along been our advice that on a falling market people should invest where they have substantial

reason to regard the stocks bought as safe in the worst of circumstances. What we still deprecate is speculation for the rise in any direction or purchases of speculative securities in the belief that an early profit will be sure. As far as we can judge, most of the benefits arising from cheaper money and the absence of a sense of impending calamity have already been discounted by the eager operators inside the market. On Wall Street, as in London, the policy has been to lift quotations without regard to intrinsic qualities or to outstanding danger in any direction, in order to be ready for the outside buyer with money in his hand. This outside buyer should continue to absent himself, were it for no other reason than that we have not yet seen the slightest indication that habits of economy are assuming dominance, whether with governments, corporations, or individuals. All continue to behave as if nothing had happened. The New Year was hardly in when the Prussian Government announced a loan of indefinite amount. It appears to have Parliamentary credits, or licences to borrow, in existence to the amount of nearly £50,000,000, and the belief in Berlin is that if the market will take such large amounts, from £15,000,000 to £20,000,000 of this credit will now be used up in the new loan. How is it possible for communities to get a chance to recuperate and make good past losses, heal the many wounds dear money has caused, when their savings are devoured in this way? The attitude of borrowers, capital eaters-up, of every class remains the same, and their demands promise to continue to exceed the savings of the people.

Trustee Securities.

In spite of the easier Money market, prices have not moved evenly up on the week in our Stock Exchange. Consols are faintly weaker, and there has been a decline of 3 to 3¼ in India 3½ per Cents because of the new loan, which loan, however, is quoted at a slight premium, although the investment demand for it has been remarkably languid. Some firmness, however, has been exhibited among provincial municipal securities, many of which have hardened, but the stocks of the County Council have shared the downward tendency of Government stocks. They may recover again, but there will be no running away, for our municipalities will be upon us in quest of money as fast as they can get their propositions ready. A loan of £5,000,000 for the County Council is reported to be hanging over our market. Colonial inscribed stocks are also being lifted with a view to further borrowings, and there is no temptation to buy them at the advanced prices because of these impending demands. Sir Joseph Ward has been telling the world that New Zealand was never so prosperous, and experience has taught us what that portends.

Foreign Government Stocks.

The reduction in the rate of the Bank of France to 3½ per cent. was partly dictated by reasons of State, for not only does the French Government have difficulty in financing its large floating debt when money is above 3 per cent., but Paris banks in general have also enormous masses of new credit to launch, including the Russian loan, and an easy market is essential to success in operations of the kind. So the Paris bourse has been stimulated, and the public there is said to be buying its favourites down even to Kaffir shares, whose tarnished decorations are being regilded. In Foreign Government bonds, therefore, the movements have been favourable this week, and amongst important groups Japanese alone have wobbled a little, thanks to wild and dangerous talk about impending strife with the United States. Brazilian bonds are up, Argentine older issues have been strong, Chilian show a general recovery, and all Chinese loans have risen, while even Prussian Consols have not given way to the extent that might have been expected on the announcement of the new loan. German Three per Cents., however, are rather weaker. Russian bonds have been steady.

Home Railway Stocks.

Buying still goes on in Home Railway stocks, but not nearly so vigorously as at the end of the year and in the first few days of January. The changes in prices were consequently less uniformly upward, and our comparison shows declines in some of them, such as Great Central, Midland, North British and South-Western deferred, but the majority of movements have not been adverse because some of the preferred stocks have risen. The market, however, lacks "go," and the principal strength has been in the privileged securities, the great majority of which have gone up £1 or more on moderate but steady investment buying. Traffic receipts for the past week show an increase of £62,970, but that includes the fruit of end-of-the-year activities.

Indian and Colonial Railway Stocks.

Indian Railways have remained unaffected by the ugly-looking news about the famine, and a few changes for the better emerge on the week. The gamble continues wild enough in Can. Pac. shares, and is greatly stimulated by the prospective bonus on the new issue. That, however, seems to be now discounted, and although the price is up $2 on the week the market yesterday showed a tendency to relapse. Grand Trunk ordinary and third preference stocks have also been heavy, but the greatest changes have been in Alberta Railway stock and in the two bond issues of the Rhodesia Railways, which, with little or nothing doing in them, have relapsed 2 to 3.

United States Railroad Shares.

Here likewise business has been less voluminous, but the Wall Street players have succeeded in lifting prices for most of the favourite counters during the week, and yesterday made a united demonstration for the rise of a quite effective description. Our figures show gains of from $2 to $4½ in stocks like Baltimore, Milwaukee, Reading, Southern Pacific, and Union Pacific, and the Baltimore Company has just declared its "usual" dividend at the rate of 6 per cent. per annum. Other declarations of the same kind are to be looked for as part of the policy of make-believe that all is over. Bonds have likewise been going up on American impulses, for here the buying is very limited, and it is just as well. Bonds of the strongest companies may be worth purchasing to modest amounts, but the great majority are not yet cheap enough.

Foreign Railways.

Leading Argentine Railway stocks have been put down on the week on realisations and sales in anticipation of the Great Southern Company's new debenture issue, which is to be offered direct to existing stockholders. Preference and debenture stocks, however, in this group of railways have been in request, and show many improvements. Antofagasta stocks remain out of favour, and some of them are down on the week. Not so Uruguayan, which have improved with Argentine, and several issues of railways in Central American States have been inquired for, especially Colombian and the 6 per cent. debentures of the Costa Rica Railway, with favourable results on prices. Interoceanic of Mexico debenture issues have likewise been driven up, and there has been a fairly effective upward movement in Mexican Railway first preference stock. Leopoldina stock has also risen, but not San Paulo, and the Cuban group has been left on one side.

Banks, Breweries, &c.

All Bank changes have not been favourable during the week, but the great majority have, and we may note specially Hongkong and Shanghai, National Provincial of England, London City and Midland, London and River Plate, and Standard of South Africa, as showing marked improvement. Brewery shares and debentures have as usual gone back, the largest decline being 20 in Bieckert's Ordinary stock. The outcry made by Brewery boards over impending legislation is mainly responsible for the increased weakness here. Speculation in London Docks stocks has died out for the time being, and the deferred is rather weaker.

COMMERCIAL AND MISCELLANEOUS STOCKS.

Hardly any change of interest has occurred in the whole Commercial and Industrial Department, but the issues of Motor companies have been rather well maintained, and a small demand has been experienced for the various issues of the British Aluminium Company. Nitrate shares, too, have not lost ground to any appreciable extent. On the contrary, some of them, like New Tamarugal, are better on the week.

A widespread recovery has occurred in Electric securities, especially those of the Canada Electric Supply and Mexican Light and Power Companes. In Home shares and debentures of this class the movements have rarely been large, but nearly always favourable.

Changes amongst Financial Land and Investment stocks have also now and then shown a pleasing tendency to improve, especially Australian Land shares, as those of the Peel River Company and Queensland Investment. Pekin Syndicate shares have relapsed a little, but Peruvian things have hardened. Hudson's Bay shares, too, are up 1 on the week, with rather more business doing in them. No stir is to be seen in the Financial Trusts market, but prices there also are up, and Gas stocks have been remarkably firm, notwithstanding the small amount of business going on in them. The news that the Gas Light Company is reducing its price of gas has stimulated inquiry for its ordinary stock, which yesterday touched 98. No immediate increase in the dividend is looked for, but if the price can be kept down that will be by and bye due.

Nothing calls for observation in Iron, Coal, and Steel securities, for movements have been as a rule quite insignificant, though favourable, especially in debentures. Cargo Fleet debentures, for instance, and Thornycroft first debentures both closed 2 up, and United States Steel shares are naturally higher. In Shipping the most interesting movement has been a slight rise in Shell Transport preference shares, otherwise this section has rather dragged. Tea shares have also been up and down, with, however, improvements dominating, and the only changes of any magnitude in the Telegraph and Telephone group have been a rise of 2 each in Anglo-American ordinary stock and American Telephone stock. National Telephone stocks have also hardened a little. London General Omnibus stock has recovered 3, and was bought yesterday at 40½. British Columbia Electric securities are strong and higher, and there has been a fair inquiry for Mexico Tramways gold bonds.

FRIDAY EVENING'S NEWS.

Depression has ruled in the markets to-day, and business has been nearly stopped by the reported rush of new issues. It is said that the Great Western and Great Central companies are to make a joint appeal for £2,500,000, and that sent Home Railways down. The Buenos Ayres Great Southern £2,000,000 of 4 per cent. debenture stock is expected to be out on Monday, and will be offered at par. Then the Grand Trunk Pacific is reported to be about to offer £1,000,000 of its 4½ per cents. at 96½ or 97, and the Montreal Street Tramways undertaking is to come for £400,000, while the Province of Manitoba, not to be behind, wants £300,000, but of these issues no details are yet to be had. There are lots more.

Yankee Railroads were being hoisted at yesterday's Wall Street engineering, and Grand Trunks rallied in spite of bad traffic, but Can. Pacs. were dull.

Dividend estimates on Home Railway stocks for the past half-year are now made up, and seem to be rather conservative. The North-Eastern Company's rate may be as much as 7½ per cent. per annum it is thought, but some look for no more than 7 per cent., the same as last year. The North-Western dividend is looked for at 7½ per cent. against 7¼ per cent., the Midland at from 3¼ to 3½ per cent., the higher figure being an advance of ¼ per cent. Great Western stock is again expected to yield a 7 per cent. rate, and the rate on Great Northern deferred may be 2 per cent. instead of 1¾ per cent. Great Eastern is not expected to do quite so well. It gave a 5 per cent. rate a year ago, and may possibly pay that again, but some look for 4½ per cent. only. On Brighton "A" the rate is expected to be 3½ per cent. as compared with 3⅜ per cent., and on South-Western 7½ to 8 per cent. is guessed at compared with an actual 7½ per cent. Lancashire and Yorkshire stock is estimated to pay the same rate, viz., 4¾ per cent. per annum, and Metropolitan stock is again booked for the ½ per cent. rate. District guaranteed should get at least 1½ per cent., the market thinks, and may get 1⅝ per cent. Midland deferred may also pay ¼ per cent. more at 3½ per cent., but many look for no more than last year's rate of 3¼ per cent. The dividend on Chatham preference is expected to be in full as compared with 2½ per cent., and North Staffordshire may pay ¼ more at 5 per cent. Last year at this date Great Central paid ½ per cent. per annum on its 1891 preference, this time nothing to 1 per cent. is looked for. On the South-Eastern ordinary a poor return of 4 per cent. against 4½ per cent. is expected.

A new Rule has been passed by the Committee of the Stock Exchange, subject to confirmation on the 27th inst., in place of Rule 75 to be repealed. This forbids members acting in double capacity of broker and dealer, brokers from making prices, and dealers from acting as agents, receiving orders from or transacting business for or with a non-member. Arbitrage with foreign exchanges, however, is to be permitted, subject to the sanction of the Committee. Pending developments in this direction will include the fixing of a minimum scale of commission and the undesirability of double commission. The avowed object of the Stock Exchange Members' Association is to improve the conditions of dealing, to obviate undue competition between brokers and to prevent competition between brokers and dealers.

More Bank Dividends.

Quite the most striking fact about joint-stock bank profits and dividends is their levelness. Whether money be cheap or dear seems no matter to them. No dividend thus far declared by any bank of importance shows an increase on the rate paid a year ago, and the increases in the balances forward or in the assignments to reserve and writings off are never indications of undue increases in the profits of twelve months back. The Lancashire and Yorkshire puts aside £30,000 compared with £10,000, but takes quite a third of that from the balance brought forward. Lloyd's puts the same amount aside, and carries forward £8,000 more, after, it is said, putting £200,000 to investment reduction account. The London City and Midland uses £40,000 to write down against nothing a year ago, but carries a few hundred pounds less forward; Parr's carries forward £20,000 more, besides giving £5,000 more to premises account; the London and Provincial gives the same amounts to reserve, pension fund, and premises, and the balance forward is raised by less than £6,500; the figures of the Manchester and Liverpool District Bank cannot be compared, but indicate the same sort of modest expansion; Williams, Deacon's Bank puts by £5,000 more, and carries forward £5,300 more, but both this bank and the York City and County take £100,000 from the reserve to write down their investments against £50,000 thus applied by the Union of London. Every one of these banks pays the same dividend now as a year ago, and so have most of the others. Is this a good sign? On the whole, yes; but that and other questions will be discussed later.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: Canadian Govt. 1913 1, to 102-104, Bk. of England 2, to 278-283. **Fall:** Irish Ld. Stk. ¼, to 84¼-84¾, do. Acct. ¼, to 84¼-85, Local Lns. Stk. Acct. ¼, to 94¾-95¼, Transvaal Govt. Acct. ¼, to 94½-95, Bk. of Ireland ⅛, to 300-305, India 1931 Acct. ¾, to 98½-99½, do. 1948 Acct. ½, to 88-89, do. 1926 Acct. 1, to 73⅜-74½.

CORPORATION AND COUNTY STOCKS.—Rise: Birmingham 3 p.c. and 1902 both 1, to 86-88, Cardiff 3½ p.c. 1935 1, to 98-100,

do. 3 p.c. 1, to 83-85, Grimsby 1, to 83-85, Leeds 2½ p.c. 1, to 72-74, do. 3 p.c. The Week in Mines.

THE KAFFIR MARKET.

On several occasions during the past few weeks we have directed attention to the remarkable steadiness of the Kaffir Circus, in face of a complete absence of public inquiry. Since the abortive attempt to create a boom right in the midst of the Yankee crisis, business has been virtually at a standstill, and yet prices did not go down. The big interests were lending just enough support to keep values steady, and those familiar with the history of the market could see perfectly well that it was being carefully nursed in preparation for a glorious outburst the moment the opportunity presented itself. This opportunity seemed to come at the beginning of the week, when news was to hand concerning the results obtained by that wonderful Gordon rock drill, with which we deal in a separate note. It was, of course, of no consequence that the drill has been in operation for quite a long time past, and that it cannot displace other similar implements without entailing very important outlays. The point was that the news came at the right time, and the *South African Mines* newspaper, which offered a prize for the best drill, is to be congratulated on announcing the result at the psychological moment. The business on this side, too, was excellently stage managed. The market opened as quietly as ever on Monday, and no one would have supposed that anything out of the way was likely to happen. But during lunch time market leaders saw to it that the drill news was actively discussed, and here and there a jobber could be noticed who had forgotten an engagement and would not wait for cheese. These were the knowing ones, and they dashed over to the House, and a few frantic bids for shares laid the foundation of the latest boomlet. We cannot call it a boom yet, but we fancy there are some deep-laid schemes in the minds of the Kaffir magnates, and although there will no doubt be temporary reactions, from what we hear the latest campaign will be driven much harder than anything during the last twelve months. Of course, it may not succeed, no matter how tireless the efforts, because, after all, if the public will not buy and only takes the opportunity to land the big houses with more shares on every rise, the movement is bound to collapse. On Monday afternoon and until quite late in the Street the market was in a state of wild excitement, and much the same thing happened on Tuesday, but as usually happens the pace at the start was made much too hot, and by the middle of the week there was a distinct sobering down. Doubtless the market leaders would prefer a much more gradual movement, as when things are rushed up at such a frantic rate the market usually exhausts itself before getting well going. But the moment the signs are read favourably every jobber in the market wants to take a hand, and rushes in, with the result that prices are dashed up in a way that nine times out of ten effectually chokes off every legitimate buyer. There has hardly been time yet to test the attitude of the public on the present occasion, and while the symptoms point to slightly increased activity on the part of the investor inquiries appear to be more numerous outsiders have as yet taken no definite hand

in the display. Yet it seems not improbable that by careful discrimination, selecting mines with moderately long lives and also moderate capitals, shares worth buying may be picked up. Paris took more interest in the market last week than for some time, and was in pretty cheerful mood throughout, encouraged by the easy progress and conclusion of the monthly settlement. The diamond slump had caused some disquietude, and created fears of trouble. Germany was also a buyer in a small way and, as we may be sure, the shops only fed the market according to its wants, so that shares were not in large supply, quotations were somewhat easily moved. Bear covering played its usual part in the rally, shorts scrambling in as soon as the market looked like going better, and in estimating the outlook the elimination of this fraternity must be considered. It means that a good supporting prop has been knocked away, but there is distinct encouragement in the news that despite the alleged disturbing influence of the Chinese repatriations, costs are being lowered steadily, and in November 63 mines representing 99 per cent. of the output worked at precisely a sovereign a ton, a figure that should leave a margin of profit for all but the poorest mines. A final computation of last year's dividends also brings out satisfactory figures, the totals paid being £7,245,748 or 1½ millions more than in 1906. To begin with, the rise was confined to the big counters like Modders, Rand Mines, Ferreiras, and Gold Fields, but the movement quickly spread, and finally embraced all the outcrop and deep level things of any account at all.

Land, Finance and Rhodesians.

The Land and Finance group also showed an improvement that was practically universal, and there was a big rise in Central Minings to the neighbourhood of 12½. Johnnies were bid for to some purpose, and Gold Trusts, H.F., and T.C.L. received their share of attention. At first Welgedachts, which have been a poor market for some time, still pursued their downward course, and fell to only ¾, but later on they went with the rest, and advanced to par. We give this incident prominence because it provides a good example of the necessity of exercising caution when selecting shares. A reference is made to this concern in our note on the New African, and it is perfectly obvious that the company must have more money. So that these shares at least are not tempting at present, even though the properties be of value, which is problematical. Rhodesians were a lot harder to move than Kaffirs, but this is not surprising considering how little there is to offer. The public will not buy such rubbish, whether prices go up or down, and the slight spurt in a few things like Bankets and Eldorados and Tanganyikas was only held with much difficulty.

Diamond Shares.

Diamond shares have again given a most erratic display, and prices have slumped badly. Hatton Garden threw over a large quantity of shares, and the failure of several closely-related diamond merchants in the States helped things down. Much more of this kind of thing may easily lead to an open crisis in the diamond trade, because a cessation of sales and non-fulfilment of existing obligations spell bankruptcy. De Beers shares were very flat in Paris last Saturday, and on Monday morning were reduced to 13 5/16, but a tremendous jump followed, and the market was treated to stories of favourable news from the Cape, and prospects of a better market for stones soon. This enabled some people to get on that round 14¼ or more, and then a renewed slump set in, which eventually landed the shares at 13¼. This was followed by a good rally to 14, but no one will be surprised if the predicted 10 is reached. Premiers touched extremes of 6¼ and 5⅝—they still contain a 10s. dividend—and everything else went down, good and bad, Jagers, Roberts Victor, and New Vaals, and also the preference shares of the leading companies.

West African and Australasian.

West Africans provided a section that did not manage to go up, and several leading things showed distinct dulness, being affected to some extent by a disappointing return of the Prestea Block A. Broken Hill shares were very quiet, and while the advices from the Colony were good, no buying orders were forthcoming. For a time prices kept up without trouble, assisted by a violent rise in silver, but as this was followed by an equally violent tumble and lead was inclined to ease, prices slid a little, and closed dull. Extreme idleness still prevails in the West Australian market, and the trifling changes are not worth detailing.

Copper and Tin Shares.

An initial rise in the Copper market provided a good opening for Copper shares, and Tintos, Anacondas, Bostons, Arizonas, and Lyells all attracted attention at better prices. Later on Great Cobars came into brisk demand on local account, and talk was current of a dividend soon; but in view of the condition of the Copper market, this looks doubtful. A subsequent setback in the metal dragged all prices down, but nothing receded far. A good initial rise in Tin was followed by a slight fall, but the share market was much neglected, and prices showed quite unimportant movements.

Miscellaneous.

In the Miscellaneous assortment a much-needed improvement occurred in Waihi Grand Junctions and other New Zealands became dull after being better. Indians were all higher, but the American group showed distinct dulness, Camp Birds, Mexico El Oros, Esperanzas, El Oros, and Tomboys all losing something, but Le Roi II. were harder. Pekins lost ground and Siberians were a flat market.

MINING NEWS.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Rand Amalgamation Rumours.—There has been much talk lately of projected amalgamations among some of the less important mines on the Rand, and the cable to hand the other day giving the average working cost of 99 per cent. of the producing mines was followed by a suggestion that the time had arrived when the mining groups should pay attention to the resuscitation of the silent mines. It is now said that the Barnato people are seriously considering the question of restarting the Langlaagte Royal mine, commencing with 20 stamps. We do not suppose anyone will be tempted to buy the shares on the news even at the few pence at which we believe they are quoted, but a fact or two may be noted. We do not remember getting a sight of the last accounts, but the company has an enormous debit to profit and loss, and owes the Johannesburg Consolidated a tremendous sum of money, and in 1895 some shares were issued at £4 7s. 6d. each! The company is awaiting a favourable opportunity to reconstruct. A fusion of the Knight Central and South Knights is supposed to have been on the tapis for some time, but if this project is brought forward it is likely to give rise to a good deal of controversy. For quite a long time a comprehensive scheme for the joining together of several Farrar companies has been mooted, but this has now been whittled down to an amalgamation of the Angelo Deep and the Hercules.

Associated Northern Blocks (W.A.).—There was not so very much in it, but the experiences of this concern for the twelve months ended September 30, 1907, were not quite so good as in the previous financial year. During the period the company treated 43,759 short tons, besides 10,840 tons of slimes re-treated, the total yield being 45,186 ozs. of bullion realising £173,034, while for the preceding year the tonnage handled was 40,554 and the output of gold 47,585 ozs. Value of bullion was £173,034 and £51 came in from another source, making £173,085 in all. Total working charges were only £58,254, including £12,147 written off for depreciation on mine development account, so that the balance of profit was £114,831. Dividends on investments, interest and transfer fees raised this to £120,324, a goodly sum, but from it there are many important deductions, some of them worth setting out. General expenses in London look very heavy at £6,706, but £4,387 of this goes to the directors on account of fees and extra remuneration on dividends. Dividend duty paid accounts for £1,750, and £4,577 is provided for depreciation on investments, a matter quite outside the control of the directors, of course. Reserve for income-tax, W.A. dividend duty, &c., runs away with £8,000, and then no less than £17,500 is applied against Northern Blocks Syndicate share account and £8,093 against the Great Leviathan Lease

joint account. These latter sums amount together to £25,593, and the matter is deserving of more detailed reference than it receives in the report. However, after meeting all these charges, there remains £72,165 as the actual nett credit. With £49,872 brought in, the sum for disposal is £122,038. From it dividends of 25 per cent. or 5s. per share are provided, involving a reduction in the carry forward to £34,538. The mine manager's estimate of the ore reserves in the mine on September 30, 1907, is 149,181 tons, containing 91,804 ozs. of gold. Comparing these figures with last year, there is a decrease of 9,097 ozs. in the estimated gold contents, but the 40,731 ozs. recovered during the year must be considered. On this occasion a larger amount of lower-grade ore has been included, it having been found desirable to break a greater width of stone than was originally estimated in order to strip all payable values from the walls. This has resulted in an increase of the tonnage from 101,769 to 149,181 tons and a reduction of the average value from 19.8 to 12.3 dwts. per ton. The balance-sheet reveals a highly satisfactory position.

BROKEN HILL PROPRIETARY, BLOCK 10.—Considerable interest attaches to the reports of the Broken Hill companies now coming to hand, on account of the rapid fluctuations in share prices during recent months, variations which, unfortunately, usually left them at a lower level. The fall was, of course, largely due to the severe relapse in the market value of metals produced—lead, silver and zinc—but bear operations have been on an extensive scale, and any sustained improvement might be followed by a rally in share values. An idea prevails that silver is now more likely to go up than down, taking the fairly long view, and the statistical position of lead is thought to be more satisfactory. Recent fluctuations in the last-named metal have been much less violent. Past performances of the Barrier companies, as the Broken Hill concerns are called, are, of course, no criterion of what may be expected in the current periods or the immediate future, but the results secured by this concern during the six months ended September 30 were not so bad, although anything but brilliant bearing in mind the excessive capital. Tons of crude ore produced were 73,815, or quite 3,000 more than in the previous six months, and the concentrates produced came to 11,596 tons against 9,993 tons. The contents were 10,959 tons of lead and 366,359 ozs. of silver—substantial increases in each case—and the revenue received was £144,932. Of that £9,034 is reserved for final adjustment on concentrates delivered during the half-year, while £3,113 is credited on account of 62,256 tons of by-products produced, making the income £139,011. Outgo under all heads was £81,221, leaving £57,790, and as there are credits of £1,429 for interest and £10,000 received during the half-year as instalment on by-products reserve account, the actual nett income is £69,220, to be added to £148,196 brought in, making £217,415. From this the dividends and bonuses paid absorbed £50,000, a sum of £7,362 was allowed for depreciation, and income-tax and royalty ran away with £3,433, so that £156,620 remained to be brought into the current half-year. Surplus of free assets over liabilities is £191,135, and the general finances look in pretty good shape. Working costs, everything included, were £1 2s. 0 1/16d. per ton of crude ore treated, as against £1 3s. 2 1/16d. for the preceding half-year. Several important additions have been made to the milling plant with a view to greater efficiency, and as these have not been in full operation during the period under review, the total benefit has yet to be shown. Substantial economies in fuel consumption are expected from the No. 2 power plant, which will shortly be at work. The condition of the mine throughout is said to be satisfactory, the various working faces maintaining their width and value.

BROKEN HILL PROPRIETARY BLOCK 14.—This company's results for the six months ended September 30 must have surpassed all expectation, and it is pleasant to note the optimistic view of the current six months taken by the directors. In the period under review, says the report, the lead market was consistently good, and although other metals have suffered severe depreciation of late, lead still maintains a very steady and remunerative price. This appears to have been written early in November, and although lead subsequently gave way considerably, the tendency recently has been much steadier, and the fine recovery in silver is an important influence. The half-year's production of sulphide ore was 46,197 tons, an increase of 8,223 tons, and 10,622 tons of carbonate ore were raised, although the estimated quantity in sight last half-year was given as 5,000 tons. Not only so, but the manager reports that not less than 10,000 tons are available and ready for mining, and in addition a probable 20,000 tons. Sulphide ore developed during the six months was a good deal in excess of the quantity mined, and the reserves are estimated at 202,489 tons, against 186,240 tons. This is an increase of 16,249 tons, and as 46,197 tons were taken out, means that 62,446 tons were disclosed, a very good result. Ore and concentrates account show a total revenue of £130,502, and the working expenditure, including administration, was £60,126, leaving £70,376 nett. Tailings account and other items raise this to £80,296, and since the balance brought in was £73,269 there is a disposable credit of £153,565. An allowance of £4,170 is made for depreciation, and after providing this, together with other items including the preference dividend, the directors pay dividends and bonus on the ordinary shares amounting to £35,000 and carry forward the very substantial sum of £110,759. The financial position looks in good order, the cash balance being £69,025 as against £20,200 on March 31 last, and the surplus of liquid assets over liabilities is £85,670 compared with £46,766. In addition there is £9,186 to come in on account of accumulated takings and slimes. These products have been sold, but will not be counted as an asset until they have been paid for. In the half-year lease No. 90 was purchased from the Australian Broken Hill Consol. Company at a very reasonable price, so as to assure an ample supply of water under any circumstances.

BRILLIANT GOLD MINING.—The report for the half-year ended October 9 states that at the Brilliant mine the company's men have continued to work the small block of ground above the No. 11 east level, and have raised and crushed 1,754 tons for a yield of 300 ozs. worth £1,057, while sands and slimes sold for £215, a total of £1,273, equal to £7 6s. 9d. per ton. There is now a further 50 tons ready for the mill, but the face of stone is not looking very promising for future crushing. Tributors have raised 1,039 tons for 1,025 ozs., and there are now 14 parties of tributors working in the mine. At the Stockholm mine 1,739 tons gave £4,261, and 236 tons of ends not yet sold are worth £200. The prospects of the mine are said to have very much improved during the half-year, and the directors expect in a few weeks' time to keep two batteries constantly going, and fully anticipate when No. 3 level yields more stone that the quality will show considerable improvement.

CARRINGTON'S UNITED MINES.—In their report for the half-year ended October 11 the directors of the company refer to the unusually heavy expenses of the period, which include £2,631 spent in the erection of a practically new plant at No. 1 shaft, and £2,158 in the erection of furnaces and the purchase of material for the erection of the series. Firewood to the value of £808 has also been paid for and stacked in preparation for the furnaces. In the six months the company crushed 3,452 tons for 1,240 ozs. of gold worth £4,734, and sold 80 tons of concentrates for £624, a further sum of £286 resulting as bonus on the sale of concentrates and based on the market price of copper. Concentrates during the past five months have been stacked for treatment in the furnaces, the quantity on hand when the books were closed being 341 tons. Copper ore on the surface awaiting treatment amounts to about 600 tons of first and a like quantity of seconds. Loss in the six months was £4,675, including £260 written off for depreciation, but the cost of the production of the stacked concentrates and copper ore has been debited. The value of this product when realised would create a credit allowing for the new plant and smelter construction being charged to capital. The company has succeeded in locating a limestone deposit for flux material.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

LONDON CITY AND MIDLAND BANK.

Progress has not been so striking in the past year as in 1906, but the total of the balance-sheet is large enough to please the most confirmed megalomaniac, it being £63,985,450. For the half-year ended December 31 last nett profits, after making the usual provision, amounted to £351,857 or £13,260 more than in the corresponding half of the previous year. That year in turn showed an increase of £21,000 on the preceding figure. Adding in the balance of £168,058 brought forward the entire sum distributable is brought up to £519,914, and out of this the directors pay the usual 18 per cent. per annum, tax free. Then £40,000 is devoted to writing investments down below market value, and the same amounts as a year ago, viz., £20,000 to premises redemption fund and £5,000 to officers' pension fund are set aside, leaving £172,658 to be carried forward, which is just £540 more than the amount so treated twelve months ago, capital and reserve funds both remaining the same as before and identical in amount. Liabilities on current, deposit, and other accounts have increased by £1,058,262 on the year to £53,282,061 as compared with an increase in 1906 of about £2,000,000. Acceptances, on the other hand, are down £616,216 to £3,962,775, so that the increase shown in the balance-sheet of December 31, 1906, has more than disappeared. Again the bank shows exceptional strength in cash in hand and at the Bank of England, the aggregate of which is £11,340,058 or £1,556,226 more. The whole of this cash has been withdrawn from call and notice money in the market, the decrease in which is £1,564,414 at £6,734,061. Investments also show a decline of nearly £116,000 at £6,629,335, but bills of exchange are £211,854 up at £1,945,360, and there is a notable increase of £951,038 in the advances and loans which now amount to £28,092,425. Also bank premises are up nearly £19,000 to £1,380,530, notwithstanding the steady writing down to which this item is treated, but the bank is continually extending its range, and during the half-year opened branches at Ipswich, Rugby, and Shepherd's Bush, London.

LONDON AND PROVINCIAL BANK, LIMITED.

The past half-year has not been an altogether favourable period for bankers, as with dear money there has been less scope for the employment of their resources, and the [illegible] the company's gross profits is barely half that for the corresponding period of 1906. After making provision for bad and doubtful debts and deducting rebate on bills not due, the gross profits were £10,850 up at £311,046, but £8,211 more at £301,808 was brought in, making a total of £301,808 [illegible] with £288,858. Against this current expenses took an extra £3,603 at £105,150 and interest payments rose by £15,105 to £113,535, leaving net profits £6,153 better at £151,800. The usual dividend at the rate of 18 per cent. having been paid, the directors transfer

£10,121 or £114 less to reserve, and after again placing £5,000 to officers' pension fund and £10,000 to bank premises account they raise the sum carried out by £6,467 to £54,775. Current deposit and other accounts, in which is included the pension fund of £161,295, show an increase of £896,190 to £15,064,138, against which cash in hand comes to £2,390,867 or £426,031 more, and money at call and short notice is £285,000 up at £1,585,000. Loans, advances, bills discounted, &c., are £254,187 higher at £9,106,003, but investments, including Consols for £2,356,161, which have now been written down to 83, have been reduced by £35,473 to £4,140,476, a figure which the auditors certify to be below the market value. The reserve fund will now stand at £1,445,000 against a paid-up capital of £800,000, and is invested in £1,728,916 Consols also taken at 83.

Manchester and Liverpool District Banking Co., Limited.

Comparison with a year ago, or even with six months ago, is largely vitiated by the absorption of the Lancaster Banking Company, which, although announced but recently, took effect from July 1 last. Yet these contrasted figures are interesting and suggestive. To begin with, profits for the half-year, after providing for bad and doubtful debts, show an increase of £81,314 at £311,134 compared with twelve months back. As there was likewise an increase of £3,957 in the balance brought forward, it follows that the additional amount available for working expenses and distribution is £85,271, the total being £352,909 before deducting working charges and the half-year's provision for income-tax. These together take £111,299, leaving £241,610 to divide. Out of this the directors pay 21s. per share for the half-year, or the same as before, and representing 17½ per cent. per annum, a payment which this time takes £34,650 more than it did a year ago, because the absorption of the Lancaster Banking Company has increased the paid-up capital by £396,000 to £1,896,000. Out of the £75,710 remaining, £15,000, against £10,000 twelve months ago, is carried to the reserve fund, and £10,000 to the pension fund, leaving £50,710 to be carried forward. With the addition now made, the reserve fund stands at £1,685,000, and doubtless it will be built up again until it once more equals or exceeds the paid-up capital. Coming to the balance-sheet, we find the liabilities on deposit, current and other accounts up £5,247,298 to £21,443,822, but the cross entry representing acceptances is only £227,521 up at £1,668,486. Among the assets a great increase of £521,275 is shown in the cash in hand and at the Bank of England, the total of which is now £2,509,840. Compared with a year ago, there is a decline of £184,355 in the money with London brokers and others at call and short notice, the total of which is now only £1,378,220, but the Lancaster Banking Company had only £200,000 altogether lent at short notice at the end of 1906, and the managers of the Manchester and Liverpool District Bank probably found fuller employment for their balances in the local market. Investments are up £1,231,409 to £4,546,883, which is a considerably smaller increase than the last balance-sheet exhibit of the Lancaster Bank would have warranted, for its investments appeared there at £1,455,095. There may, consequently, have been further writings down or opportunity may have been taken to realise here and there. Bills of exchange show an increase of only £92,814 at £3,740,485, but the Lancaster Bank only showed £359,144 in this form of asset. A much greater change is revealed in the total of advances in current accounts, &c., which is now £12,567,009 or £3,716,475 more than at December 31, 1906, but of this nearly £3,000,000 is probably due to the accounts taken over from the Lancaster Bank. Altogether, the balance-sheet now totals £26,910,923 or £5,868,194 more than it stood at twelve months ago. At one bound, therefore, the Manchester and Liverpool District Banking Company has sprung into the first group amongst English banks, and it is now the largest joint-stock bank whose head office is outside London. And the directors appear to be well pleased with their bargain. The directors of the Lancaster Bank have joined the District Bank board, and the body thus constituted states its belief that the acquisition of an old-established business and valuable connection in the Northern part of Lancashire, in Cumberland, and in Westmoreland will prove advantageous to the bank's shareholders and customers and to the general public. We see no reason to doubt that this anticipation will be fulfilled.

Lancashire and Yorkshire Bank.

The profits for 1907 again show a modest increase, being £3,068 up at £153,339. As the balance of £23,120 brought in was £6,559 mor ethan that of the previous year, it follows that there is altogether £9,627 more to distribute or £176,459 in all. The directors are therefore warranted in paying another dividend of 16s. per share, making with the interim dividend of 15s. 15½ per cent., as before, for the year, tax free. Then they write £20,000 off the cost of investments against nothing a year ago, and place £10,000 to the reserve fund, raising it to £615,000 against a paid-up capital of £862,660. This will leave £12,747 to be carried forward. The balance-sheet shows no important changes, but deposit and current account liabilities are up about £82,000 at £9,501,340. Acceptances are also about £37,000 higher at £107,539. The note circulation in the Isle of Man is only £5,436, although £19,000 in India 3½ per cent. stock has been lodged for its security. The assets and cash in hand and money at call and short notice all put in one item show an increase of £251,276 at £2,291,854, but investments are down about £62,000 at £2,199,592, the reduction in this item on the two years being about £100,000. Bills of exchange are also £11,254 down at £714,575, and advances on current account, loans on securities, &c., are £72,000 lower at £5,515,534. Bank property remains as before at £375,000, and the total of the balance-sheet £11,204,093. The sum reserved as rebate is £10,359.

York City and County Banking Co., Limited.

This bank has again been rather severely hit by the depreciation in its investments during the past year, and the directors have deemed it advisable to transfer another £100,000 from reserve towards writing down the book value of the securities held. In addition they have appropriated £30,000 out of profits, and these two sums have enabled them to write down the Consols to 80 and to make full provision for the fall in price of the other investments. This will leave the reserve at £600,000 against a paid-up capital of £780,000, and the position therefore is still a strong one. Profits for the twelve months were £2,928 up at £151,890, but the balance brought forward was £9,962 larger at £29,534 making the available total £181,424 compared with £168,534. In view, however, of the above-mentioned provision for depreciation the dividend paid is kept down to the 10s. per share to which it was reduced a year ago, and after adding another £3,000 to officers' pension fund and transferring £5,000 or £1,000 less to bank premises account the sum carried out is reduced by £16,110 to £13,424. Current accounts, deposits, drafts, contingent fund, &c., all in one item, have risen by £124,244 to £11,144,942, but the note circulation is only a few hundreds up at £69,965 and the balance-sheet total shows an increase of no more than £8,919 at £12,673,331. On the credit side cash in hand, at bankers, at short notice, and secured advances to brokers have been reduced by £27,707 to £2,549,459 and the directors might consider the advisability of stating this item in greater detail. Investments, notwithstanding the writing down, are £77,396 higher at £2,386,581 and bills of exchange come to £732,728 of £14,914 more, but current accounts and advances have been reduced by £42,008 to £6,479,965. Bank premises are valued at £443,524 or £1,286 less, but properties yielding rents show a further drop of £11,662 at £76,088.

Union Discount Company of London.

It is really a wonder how these great discount houses manage to steer their way safely through the shoals and quicksands of finance in times like these; but they do, and this company not only came safely to port with its freight at the end of the half-year, but shows a considerable increase in the profits. Leaving out the balance brought forward for the present, the gross earnings for the half-year came to £240,524, which was £38,383 more than the gross profits for the second half of 1906. Of this profit, however, £29,647 was absorbed by the increased rebate. In other words, the board set aside £160,493 as rebate compared with £130,846 twelve months back or £25,432 more than was set aside six months ago, and the nett profits of the half-year available for dividend and other purposes were therefore only £61,673 after allowing for working expenses, which though £300 up on the year's comparison were still quite modest at £18,158. Out of these profits a dividend at the rate of 11 per cent., the same as before, was paid upon the shares, taking £41,250, and £15,000 was added to the reserve fund, compared with £10,000 a year ago and £15,000 six months ago, leaving £61,348 to be carried forward compared with £55,725 brought in and £54,193 carried out in January, 1907. With the addition now made the reserve will amount to £465,000 against a paid-up capital of £750,000, and there is also a provident reserve fund of £49,418, while over and above the company holds the rebate and the balance forward, together upwards of £220,000. The balance-sheet shows a liability on loans and deposits including provision for contingencies, which probably means a hidden reserve, amounting to £17,537,288 besides a liability of £7,100,488 on bills rediscounted, making the total liability to the public and the market £24,673,736, a figure approached by no other business of the kind in the kingdom; indeed, one may say in the world. Against this liability the cash at bankers stands at £1,002,327, an increase of nearly £400,000 on the twelve months, and Consols, Exchequer bonds, Indian Government and other securities held are also about £127,000 up at £2,494,462. Bills discounted held amount to £21,302,463 as compared with £17,324,244 a year back, but the loans on securities at call and short notice, &c., are upwards of £1,500,000 down at £1,305,151. Freehold and leasehold premises are entered at a few hundred pounds less, the valuation being now £106,748, and the total of the balance-sheet is up rather more than £4,000,000 at £26,216,245. One cannot help wondering how long this expansion will continue, but the dominant thought is how great the skill, vigilance and business acumen must be that insures the safety of interests so extended.

National Discount Co., Limited.

Although this company's balance-sheet does not run into quite such big figures as that of its principal competitor, the total is one of no small magnitude. The management, too, is equally to be commended for the way in which they have handled the resources at their command during the half-year. Gross profits showed a satisfactory increase of £29,493 at £181,627, but the greater part of this is added to the provision for rebate on bills not due, which is £28,443 up at £124,947. Current expenses took £11,877 or £1,595 less, and as at the same time the sum of £12,751 brought forward was £1,852 larger, the disposable surplus amounted to £57,554 compared with £53,057, and after paying the usual dividend at the rate of 10 per cent. per annum the balance carried out is raised by £4,497 to £15,221. Bills discounted are up by the very substantial amount of £2,257,734 to £14,673,938, of which £3,309,063 or £205,280 less has been rediscounted. Deposits and sundry balances have increased by £1,491,949 to £13,495,948, and in order to provide for the expansion in the bills held, loans at call, short and fixed dates

Debenture Corporation, Limited.

This is really a trust company having the greater part of its money invested in mortgage debentures, and a very ponderous

affair it is. Ordinary preference and founders' capital adds up to just two millions, and debenture stock exists to the amount of £1,272,186. Total debentures held exceed 2½ millions, English industrials appearing for £1,500,811, American brewery and industrials for £309,248 and English companies trading abroad for £456,630, while £334,010 is held in the debentures of the United Realisation Company. The report observes that as regards the affairs of this company and of the Mauritius Estates there is no change to report. Interest was received of 1 per cent. in cash on the first-named and 3 per cent. on the second. The general business is said to have been well maintained, but whether the directors refer to these two enterprises or to the company's business as a whole is not very clear. In addition to the securities mentioned, there are preference and ordinary shares to the amount of £516,894, advances on security £157,050, freehold properties in the City £84,125 and British and foreign Government securities £146,103. There is a market depreciation on certain quoted securities of £140,000, which naturally enough the board thinks will be recovered, but is there no word to be said of the unquoted stuff, which must include both the United Realisation and the Mauritius Estates? It looks as though the wastage on the investments for which there is no quotation must be far heavier than on the others, and this is one of the enterprises which ought to publish a list of holdings with cost prices shown, so that the shareholders could form some idea of the real position. The statement of accounts as issued is of no use at all in this respect. Fortunately there is a reserve fund of £250,000 and a premium reserve of £66,565, but the latter is really capital. Total revenue in the twelve months to December 31 was £171,038, which includes a nett profit of £12,096 on purchase and sale of debentures, fees and commissions, and after meeting general and other charges and debenture interest—directors' proportion of profits is £4,673—there remains a sum of £103,656. This is arrived at after writing off £13,556 from certain securities. From it the preference dividend takes £47,500, a dividend of 5 per cent. is paid on the ordinary stock, £3,562 goes to the founders' shares and £5,098 is provided for income-tax. The sum payable to the Founders' Share Company is 3 per cent. on the amount of the Debenture Corporation's reserve, and permits a dividend of 1⅛ per cent., with an increase from £128 to £304 in the sum carried forward.

have been reduced by £919,563 to £998,442 and investments are £100,989 down at £2,125,485. Cash balances are £71,369 up at £259,715, and freehold premises are now valued at £126,000 or £15,400 more.

UNITED LANKAT PLANTATIONS CO., LIMITED.

Considering the substantial increase of £37,788 shown in the profits of this company a year ago, the set-back of £2,879 in those for the twelve months ended October 31 is unimportant. Profit in the crop gathered in 1906 still reached the highly satisfactory figure of £113,007, and with £5,517 or £388 more from interest and transfer fees, gave a total of £118,524 to be dealt with against £121,015. London office charges were reduced by £120 to £3,259, and loss on exchange was also smaller at £27, but income-tax took £150 more at £4,213, and £817 went in expenses of issuing bearer warrants and after putting the usual £2,000 to lease depreciation fund the nett surplus was £3,332 smaller at £108,208. A very much larger balance of £37,876, however, was brought in making the disposable total £21,767 up at £146,084, and as only a small proportion of the company's capital is in the form of preference shares the dividend on these absorbs only £1,911. The dividends and bonuses on the ordinary shares can therefore be maintained at the high rate of 40 per cent., and after paying the directors their extra remuneration of £2,000 and giving the widow of the late secretary the £3,000 voted to her at the extraordinary general meeting in March, the sum carried out is further increased to £56,643. Leasehold properties in Sumatra still stand in the balance-sheet at £170,423, and buildings, stores, cattle, light railway, &c., are valued at £42,706 or £1,179 more, but the figures seem exceedingly moderate for so prosperous an undertaking as this, and the reserves of £123,000 make the position an exceedingly sound one. Sundry creditors and bills payable have risen by £5,840 to £69,398 against an increase of only £798 to £13,543 in sundry debtors, but the expenditure on the 1907 and 1908 crops amounts to £104,207 or £12,869 more than had been spent at the same date last year. Cash balances amount to £135,610, of which £130,000 is on deposit, in addition to which the company has £48,793 invested, and altogether the resources are decidedly ample. The area under cultivation in 1907 was 140 fields larger at 1,315 fields, and the crop, which is about to be shipped home, amounted to 15,801 piculs or 1,975,125 half-kilos. compared with 15,056 piculs or 1,882,000 half-kilos. for the previous year. Provided nothing untoward happens to the market, the directors should therefore have another satisfactory account to submit twelve months hence. For 1908 about 1,320 fields are under cultivation, and latest advices from the estates are said to be satisfactory. Less progress was made with the planting of rubber trees during the year than had been anticipated, and only 18,000 trees were planted instead of 28,000, making a total of 80,000 trees on the 425 acres allotted for that purpose. The cost of this work was £1,564, bringing the outlay to date up to £2,819.

RIO DE JANEIRO FLOUR MILLS AND GRANARIES, LIMITED.

A further slight increase was shown in the manufacture and sale of flour during the year ended September 30, but this did not account for more than a very small proportion of the splendid increase shown in the trading profits. The managing director was shrewd enough to foresee that a scarcity of wheat was impending, and on his advice the board authorised the purchase of a reserve stock at the moderate level of prices then ruling in order to ensure the supplies of the mills in the latter part of the year. Over 4,000 tons were bought for this purpose, and as, owing to the deficient harvest in the United States, Russia and elsewhere, prices of wheat rose rapidly and a large profit was made. Against this the sale of flour in Brazil was rendered unusually slow and difficult, and it was at times impossible to obtain a milling profit on the current market prices of wheat. Still, trading profits, including £47 from transfer fees, rose by no less than £30,850 to £112,641. After charging expenses were £1,131 heavier at £18,133, and income-tax absorbed £3,380 more at £6,090, but interest and discount was £1,442 less at £3,157 leaving a nett surplus of £85,311 compared with £52,665. In view, however, of the high price of wheat and the uncertainty of the future course of markets the directors have deemed it advisable to set aside £33,000 to a special wheat reserve to be dealt with eventually as circumstances permit. This gives a disposable surplus of £53,311, to which is added £15,222 from the previous account making a total of £68,532 against £67,848, out of which the dividends of 15 per cent. on the ordinary shares are repeated and, after again transferring £500 to reserve, £15,904 or £684 more is carried forward. No provision for depreciation has yet been made on the freehold land, mill and buildings, which stand in the balance-sheet at £249,470, while shares in the Frumentum Steamship Company and other investments taken at cost are sheltered under at £70,982, but, on the other hand, the reserve fund has been increased to £67,000 and the fund for bad debts, improvements, depreciation on investments and exchange fluctuation has been increased by £5,196 to the round £50,000. Stocks of wheat, flour, &c., are £174,926 higher at £372,520 against which, of course, there is the reserve just created, sundry debtors owe £30,480 more at £161,133 and bills receivable are £16,120 up at £61,100, and the increases in these items are responsible for an addition of £157,107 at £280,602 in sundry creditors. Cash has dropped by £25,098 to £48,602 of which £27,783 is required for the balance dividend. Another £4,700 of the debentures was paid off during the year leaving £112,400 outstanding, of which £46,300 is used as collateral security for advances. The directors state that substantial progress has been made towards a settlement of the question of the expropriation of the company's water rights and frontage by the Brazilian Government for the purpose of the new quays in the Rio de Janeiro Harbour, and that they have now grounds for hoping that a settlement will be shortly arrived at. Should this settlement be concluded they recommend that the company's operations should be extended to include the manufacture of the cotton cloth required for making flour bags. It is estimated that the capital outlay on a cotton spinning and weaving plant of suitable size would be about £65,000, and the directors, therefore, propose to increase the capital to £400,000 by the creation of 65,240 shares of £1 each, which will be offered to the shareholders *pro rata* at par.

ROBERT CAMPBELL AND SONS, LIMITED AND REGISTERED.

Operations for the year ended June 30 in New Zealand and December 31 in London were not nearly so good as those for the preceding twelve months. Profits on livestock fell off by £2,779 to £12,681 and on wool sales by £4,668 to £40,201, while there was practically no miscellaneous revenue, so that although ordinary interest gave £1,122 more at £3,990 and interest on deferred payments for land sold was £915 up at £2,789 the total income was only £50,667 against £65,500. Expenses in the colony were reduced by £1,928 to £28,283, but London office charges and debenture interest took £333 more at £4,871, and in spite of the very much larger balance of £22,240 brought forward the disposable surplus was £1,487 lower at £28,753. A year ago £10,000 was transferred to reserve, but that fund is ignored on this occasion, and after repeating the dividend of 10 per cent. £8,513 is added to the sum carried out, raising it to £30,753. The company has sold two small properties during the year, and has entered into a contract for the sale to the New Zealand Government of the Otakaike Station with delivery in March next, and it is probably in connection with the last-named transaction that steps are now being taken to reduce the capital. As the outcome of the sale of the other two properties freehold land and buildings have been reduced by £16,495 to £137,787 and land sales in suspense are £27,116, as at £80,923 leaving the balance-sheet value of the properties £43,014 down at £50,804. Livestock stands at £59,990 or £4,643 less, the reduction being mainly in sheep, but sundry debtors owe £28,587 more at £71,667 and cash, including short loans, is £23,752 up at £119,143, while creditors have only risen by £1,399 to £4,875.

WATERLOW BROS. AND LAYTON, LIMITED.

Considerable changes have taken place in the constitution of the board of this company during the past year, and perhaps the most important section of the directors' report is that referring to Mr. John Henderson. An advisory committee was appointed in January to consult with the directors with a view to the strengthening and reorganisation of the board, and upon the recommendation of that committee Mr. Henderson was called upon to resign. At the end of the company's financial year on September 30 Mr. Henderson's appointment as secretary was also terminated, and the directors state that grave irregularities on his part have come to light in respect of the issue of share certificates. They add that they are advised no liability rests on the company, but the matter is too important to be overlooked in this way, and we expect the shareholders will have a good deal more to say at the meeting on March next. Amongst other changes made during the year have been the appointment of a factory manager and the transfer of the manufacturing departments from Old Ford Road, Bow, to the premises at Watford.

Thames-street, with the result that considerable economies have been effected in wages and salaries. From the accounts presented it is evident that these steps have not been taken any too soon if the company is to enjoy anything like a return to prosperity. Trading profits for the year were £8,572, to which was added £1,264 from interest and rents making a total of £9,836. Debenture interest took £1,680 of this and repairs, &c., £1,083, and after providing administration charges and writing off £2,837 for depreciation and £545 for bad debts the nett profits were only £2,956. With £358 brought forward the sum to be dealt with was £3,314 out of which a half-year's dividend was paid on the preference shares and £814 is carried forward. A valuation of the machinery, plant, &c., showed that the book value was too high by £6,823 and this amount has been written off reducing the item to £44,186. The directors, however, regard the goodwill as something to play with as they please, and have added a similar amount to the item of goodwill, freehold and leasehold properties, copyrights and debenture issue expenses—a curious jumble—which now stands at £129,010. It is true that at the last valuation in 1900 £7,810 was written off, but the present arrangement seems to us to be against the best interests of the company. Investments are valued at £6,445, but of this £2,404 is in respect of 3,404 £1 shares in Waterlow Bros., Limited, a subsidiary concern established to carry on the South African branch of the business, which seems to have been conducted at a loss and is now being wound up. Against these items the reserve amounts to no more than £4,180, and under these circumstances it would appear that the balance-sheet does not show the true position of the company, as the assets include a mass of intangible stuff which is merely so much dead weight to be carried. Fortunately, floating liabilites are light at £8,450 against £42,300 due from sundry debtors and on bills receivable, £23,029 in stock, work in progress, &c., and £3,468 held in cash.

J. Cawthra and Co., Limited.

The gain on trading account for the twelve months ended November 30 showed an improvement of £1,123 at £18,159, which was increased to £1,267 at £19,385 by the addition of estimated liabilities brought in, estimated assets carried forward and £393 from interest and transfer fees. After deducting estimated assets and liabilities shown on the other side and providing for all charges, including £3,000 for depreciation and £95 for bad debts, the nett surplus was £1,402 up at £14,359. With £2,146 or £130 more brought forward the disposable balance amounted to £16,505 against £14,973, out of which the directors put an extra £1,000 at £4,000 to reserve and raise the dividend on the ordinary shares by ½ per cent. to 8 per cent., leaving £2,390 to be carried to the new account. Additions to property account were modest at £369, so that this item less the depreciation allowance is £2,631 down at £104,798, and against this the reserves now reach a total of £49,000, of which £13,000 or £3,000 more is represented by investments of some kind. Floating liabilities are commendably small at £12,024, while, on the other hand, debtors owe £47,077, stocks are valued at £40,444 and £12,831 is held in cash.

East India Distilleries and Sugar Factories, Limited.

A year ago the directors of this company endeavoured to comfort their shareholders for the big decline then shown in profits by a forecast of better times to come. Large extensions, which were in progress, were to be completed in time to benefit the revenue for the following months, and everything was to be as smooth and bright as possible. Unfortunately, these predictions have not been realised, the new factory in Tinnevelly and the new distillery in the Central Provinces are only now approaching completion, and in the year ended September 30 contributed little or nothing to the revenue; on the contrary, establishment and other charges were increased in consequence of these works, with the result that while trading profits rose by £6,020 to £30,409 the gain in nett income was only £2,840 at £7,170. With £5,673 brought forward the disposable total was £2,090 up at £12,843, but the dividend on the preference shares requires £14,000, and the directors have not on this occasion any reserve fund upon which they can draw. Undeterred, however, by the failure of their prophecy with regard to the outcome of the twelve months' trading, they have resolved to pay the 7 per cent. dividend by applying £10,000 or 5 per cent. out of the profits shown and £4,000 or 2 per cent. out of the profits of the current year—a most dangerous proceeding, which, we trust, they will not have cause to regret. No depreciation has been allowed on any of the properties or goodwill, which have only been reduced by £406 for sundries sold to £345,716. Buildings and plant are valued at £7,283, and the expenditure on extensions to date amounts to £37,679, while advance to the Sarangapany Sugar Mills is £1,956 higher at £21,422. Stocks, too, are £34,392 higher at £123,980, and one way and another the company is so pressed for funds that it has had not only to increase its borrowings in Madras by £38,388 to £58,971, but also to raise £22,000 in London. Sundry creditors are heavy at £26,783 compared with £14,180 to come in from sundry debtors, and cash is down by £1,073 to £3,526, so that still more borrowing will probably have to be resorted to to meet the dividend payments, as apart from an investment of £2,841 in rupee paper at cost the only other asset is £6,375 for stamp and underwriting commission on preference shares issued in April, 1906, an item which can hardly be regarded as liquid.

Barnagore Jute Factory, Limited.

For the year ended August 31 this Calcutta company made a profit on working of £83,305, and after providing for all charges, including £19,507 for repairs and replacements of plant and £1,181 for half cost of issuing new capital and debentures, the nett surplus was £20,040. Adding £10,115 from the previous account, the disposable total was £30,155, of which debenture interest took £4,500 and preference dividend £10,000, and £845 was written off for cost of additions and improvements to property. Out of the balance a dividend of 5 per cent. is declared on the ordinary shares, but in order to pay this the sum brought forward is freely drawn upon, leaving only £923 to be carried out. Land, buildings, machinery, &c., are valued at £370,000, in addition to which £191,117 has been spent on the new mill at Bally opened last February, and £8,286 on the Barnagore railway siding, making a total outlay of £569,403. The auditors report that nothing has been written off this item for depreciation, and under these circumstances the reserve of £5,000 seems hopelessly inadequate, even though it is reinforced by £7,658 transferred from fire insurance fund to debenture sinking fund. This step has been taken in consequence of a fire which destroyed a neighbouring mill and induced the directors to abandon the old policy of the company providing its own insurance. Liabilities to sundry creditors and bills payable look heavy at £264,223, but on the other hand stocks are large at £221,227, and in addition the company has £42,295 to come in from sundry debtors and £22,057 in cash. The cost of the new mill has exceeded the estimate, and in order to provide for the deficiency the Calcutta agents have underwritten the 4,000 £5 ordinary shares unissued, and these will be offered for subscription early next year, when the proceeds will no doubt help to give the balance-sheet a healthier appearance than it has at present.

St. Anne's Well Brewery Co., Limited.

A better result than has been attained for some years is shown in the nineteenth annual report for the year ended September 30 last. After charging general expenses and allowing for depreciation and repairs trading profits amount to £9,997, and with transfer fees and £506 from last year £10,506 is available. A dividend of 6 per cent. on the ordinary shares against 4 per cent. last year absorbs £2,400. Debentures and preferences being provided for, £300 goes to reserve and £741 is carried forward. Capital expenditure, property, goodwill, &c., stand at £142,179, increased by £1,675 during the year, and less £100 depreciation of leaseholds, and stock-in-trade £35,838. Debtors owe £15,230, and cash in hand is £1,818. The company owes £8,841 to creditors, £7,741 and £1,100 on mortgage. Reserve with the year's addition is £10,000, but only £4,221 is separately invested. It hardly seems necessary to give any reason for not paying another 1 per cent.

Bullard and Sons, Limited.

This Norwich brewery, while reporting a satisfactory increase of sales, announces little increase in profits, owing, it is explained, to a better class of beer being supplied. Trading brought in £69,032, rents, interest, and transfer fees £12,475, giving £81,507 gross profits, but working expenses took £43,875, interest on debentures, loans, and deposits £19,566, depreciation £5,398, and compensation duty £2,327. So that nett profit is only £9,579. To this is added £181 brought in, leaving £9,760 available. As the preference dividend absorbs £9,525 nothing is left for ordinary dividend or reserve, and £235 is carried forward. Property, including goodwill of 13 years standing, plant, utensils, &c., is valued at £777,344, and book debts, &c., at £22,935. Off this total of over £800,000, in which is submerged the small reserve of £7,000, only £5,398 is written off for depreciation and provision for bad debts. Stocks on hand are £35,626, and cash the colossal sum of £326, exclusive of £2,067 in hands of debenture trustees. In addition to £787,767 capital and debentures the company owes £22,416 to loans and £16,044 to creditors. With such a financial position and the menace of adverse legislation ahead a Mark Tapley's disposition is required to feel any hopefulness as to the outlook.

A. Vedrine and Co., Limited.

The report recently issued by this company is again for an irregular period, covering seventeen months from May 1, 1906, to September 30, 1907. During that time, the directors say, the Rouen works were put in a perfect state of efficiency, and the company was enabled to undertake and execute very large and important orders for taxicabs, not only for France, but for England and other countries. These orders, however, do not seem to have enabled the company to make very much headway, as profits on trading amounted to £19,522 against £16,100 for the previous nineteen months. Depreciation allowance was £5,006 compared with £1,716, and with £206 or £92 more from interest and transfer fees the nett income was only £234 up at £14,722. Directors' and management fees, London office expenses, interest, law costs, income-tax, &c., are all lumped together and absorbed no less than £8,593, and after writing off £567 for balance of formation expenses and £599 for part expenses of further share issue £4,963 was left. In spite of this an interim dividend of 5 per cent. was declared on the ordinary shares in August at a cost of £6,500, and as the preference dividend took £1,062 the balance brought forward had to be heavily drawn upon, reducing it from £6,978 to £4,379, and no further distribution can now be made on the ordinary shares. Even these figures apparently are more favourable than they would be had due regard been paid to provision for contingencies. The auditors draw attention to the item of sundry debtors, which, they say, contains book debts of large amount, and, in their view, of somewhat doubtful value, on which they think a much larger reserve than the £250 allowed should have been made. Taking the figures as they stand, however, the

position is none too comfortable, as against bills payable and sundry creditors of £32,404 sundry debtors, less the small reserve, amount to £30,848, and bills receivable to £4,039; and although £8,730 was held in cash most of this was required for the dividends. Expenditure on buildings, &c., at Courbevoie amounted to £5,523, and £9,303 was spent at Rouen, and after deducting the sums now written off these two items stand in the balance-sheet at £82,771 and £19,070 respectively. In addition, £56,903 is represented by stocks of timber and materials and work in progress, making a total outlay of £158,744 against the paid-up capital of £160,000.

Burmah Electric Tramways and Lighting Co., Limited.

Operations of this company during the year ended July 31 were hampered by the prevalence of plague, which not only drove about one-third of the population out of the city, but kept visitors from the neighbouring districts away. Traffic receipts consequently dropped by £1,111 to £12,526, but revenue from lighting, power, street watering, &c., was £296 larger at £526, and £2 came in from transfer fees, &c. Expenses rose by £106 only, but were nevertheless higher than the income, leaving a debit of £18 compared with a profit of £970 a year ago, which was deducted from the balance brought in, reducing it to £3,525. Expenditure on the property exceeds the issued capital by £10,790, so that the company owes £8,025 to the contractors and £4,394 to sundry creditors, and is very hard up. Next to the balance on capital account the principal item on the credit side of the balance-sheet is £3,294 for stores held, and apart from that the company has £880 to come in from sundry debtors, £329 on deposit with the Mandalay municipality and £651 in cash.

Dalmeny Oil Co., Limited.

The creep in the pillars of the workings mentioned by the directors in their report for 1905-6 would seem to have been less temporary than anticipated, and has continued throughout the twelve months ended October 31, greatly to the company's detriment. Revenue from oil, sulphate of ammonia, naphtha, &c., was £5,595 higher at £65,412, but the shale put out yielded a very low quantity of products, and on the other hand outgoings were heavy. The high price of fuel and other materials, coupled with the high scale of wages resulting from the high wages paid in coal mines, caused an increase of no less than £7,434 to £66,594 in working costs leaving a loss of £1,182 on the year's working compared with a profit of £656. Miscellaneous receipts were smaller at £712, but reduced the loss to £469, and this was deducted from the balance brought forward leaving £377 to be carried to the new account. A small sum of £200 has been written off works and plant, reducing them to £47,977, and stocks are £695 down at £4,389, but debtors have risen by £871 to £7,720 against an increase of £2,206 to £9,438 in sundry creditors. Cash on deposit has been reduced by £1,450 to £5,000, but this only means that the amount has been transferred to the current account, which is £1,410 up at £1,462.

British Empire Land Mortgage and Loan Company.

This company, which operates in Pretoria and Adelaide, shows gross receipts for year ending September 30 as £7,242 from £177,279 employed in South Africa and £7,734 from £135,244 invested in property in South Australia; but the expenses are not allocated in such a way that an accurate comparison may be made of the profits earned in each colony. For while South Australia is debited £759 only for general expenses, it is also debited £5,743 for interest on money and debenture stock; South Africa is debited £4,333, including £3,355 for salaries and fees, including secretary and staff in London. After allowing other small expenses the nett profit comes out at £4,422. The balance from last balance-sheet was £11,901. Dividends paid took £3,595, and £11,919 is now available. Out of this the preference dividend absorbs £4,867, and £7,051 is left to go to next account. Cash and loans on security amount to £10,663, but creditors £4,180, current accounts £2,904, leave the company in debt £7,085, while a loan of £7,000 on debenture stocks has been repaid since striking the balance.

North of Scotland Canadian Mortgage Company.

In its year to November 11 last this company did not make quite so much progress as in the preceding year, which seems to be in its favour, looking at the way inflation has gone on in Canada. Its entire profit for the year was only £26,611 or £150 more, and as a smaller balance of £2,525 was brought forward, it follows that the amount distributable was down to £30,186 against £32,562 a year back, but the directors are quite able to pay a 10 per cent. dividend, together with a bonus of 2½ per cent., making 12½ per cent. for the year. They also add £6,738 to the reserve fund as compared with £10,000 a year back and carry £2,000 to a special reserve for the redemption of debenture stock as against only £237, and all this done, £878 less is left to carry forward at £2,698. The reserve, including the premiums received on new shares sold, which amount to £13,262, is now brought up to £165,000, making a total addition for the year of £20,000 including the premiums. The directors mention with deep regret the death of the founder and chairman of the company, Mr. James W. Barclay, and intimate that Mr. A. N. Ogston has been appointed chairman in his room. From the balance-sheet we see that £72,038 more has been advanced on mortgages during the company's year, making the total now outstanding £911,091. Very little property has had to be foreclosed upon, the total real estate thus held being entered at only £770, and nothing could better indicate the care with which the company's business is managed.

British South Africa Tobacco Plantations.

Quite a lot of information is given in the report of this company which will doubtless be useful for Mr. Mandeville's circulars, but does not seem to be of much value to shareholders or the outside public. Expenditure on revenue account during the year was £3,119, making the total outlay on this head £5,817, against which there is nothing in the way of receipts as yet, but there will still be something left over perhaps after the £2,700 still due in cash to the vendors has been paid. Tobacco does grow in Rhodesia and 36,000 lbs. of it was packed and cured this season. The company has also made some cigarettes on its estate, and appended to the report is a very nice photograph of one of its tobacco fields. Thus it might have a future if Rhodesia had a population.

R. H. and S. Rogers, Limited.

Including £1,383 brought in the nett profit for the year ending October 31 amounts to £11,732 against £13,132 last year. With the interim paid of 2½ per cent. the dividend now proposed of 7½ per cent. will make 5 per cent. for the year. Reserve fund is given £900 against £500 last year, and directors' fees absorb £1,400 or nearly £100 less. Stocks in trade are £607 larger at £46,175. To property and plant, &c., additions of £501 have been made against £1,598, and £2,508 written off against £2,859, bringing the item down to £107,633. Debtors are £2,422 larger at £36,338, while creditors are owed slightly less at £11,020. Cash is a few pounds less at £2,945. Insurance fund, £505, increased by £81, and reserve, with this year's addition, £10,000, are sunk in the business. Mr. Charles Stuttaford has joined the board in place of Sir John Pound, Bart., resigned.

Grand Junction Canal.

Depression in the brickmaking and kindred trades has again affected traffics, with the result that the gross profits for the half-year ended June 30 last have fallen off £1,920 to £47,618, as compared with the corresponding period in 1906. Expenditure is only down £419 to £24,596, but this includes £646 spent on walling in the Paddington branch. With £16,767 unappropriated the total disposable is £33,977, debenture and preference charges having been provided for. Out of this it is proposed to pay £1 10s. per share, making, with a similar distribution on account of the previous half-year, 3 per cent. for the 12 months, and leaving £17,027 to go forward. The balance of canal improvements suspense account remains at £21,279, materials and stores total in all £5,751, having been written down £152 during the half-year. Rents and tolls receivable amount to £29,240, of which £28,088 has since been paid, and cash to £19,606. The amount spent on reinstating works on the Leicestershire and Northamptonshire Union and Grand Union Canals to June amounts to £67,904, and the balance of the amount received from the debenture issue is £14,962. Reserve is slightly decreased by the result of sundry small debits and credits to £18,337. Dividends outstanding and sundry creditors total £9,555.

Parke's Drug Stores, Limited.

Trading profits for the year ended September 30 fell off by £614 to £9,126, and although interest yielded a few pounds more at £598, while the balance brought in was also slightly larger, the total income showed a decrease of £574 at £10,124. On the other hand, a reduction of £625 to £3,761 was effected in management and other expenses, and after providing £84 or £224 more for repairs and renewals the nett surplus was only £173 down at £5,583. Of this £418 or much the same as a year ago was put to fixture depreciation and reserve fund, but more is required to repeat the dividends of 6 per cent. on preference and ordinary shares, so the addition to stock reserve is cut in half at £150, and after putting another £500 to general reserve £321 or £149 less is carried forward. Leases investments account is slightly lower at £9,488, but plant and fixtures, &c., have been increased by £443 to £33,536 and goodwill remains at £12,151, and against these the total reserves will now stand at £13,814 or £1,068 more than a year ago. Stocks are £1,434 larger at £41,972, with the result that liabilities to sundry creditors and on bills payable are heavy at £15,734, and exceed the amount to come in from sundry debtors by £13,732. Cash has dropped by £375 to £3,135, and of this £2,693 is absorbed by the final dividends declared.

John Barran and Sons.

This firm of wholesale tailors, &c., in Leeds made a profit of £27,396 in its year ended October 31 last, and after adding in the balance of £459 brought forward, together with some £10 10s. of transfer fees, there was £27,866 to divide, out of which directors' fees took £900, debenture interest £4,500, reserve fund £2,201, managers' bonus fund £3,881, and the dividend on the preference shares £6,600. Out of the balance of £10,583, which was about £2,350 more than that of the previous year, a dividend of 7½ per cent as against 6 per cent paid a year ago is recommended on the ordinary shares which, when paid, will leave £834 to carry forward. With the addition now made to the reserve its total will be £9,178, which is not a large sum for a business whose freehold premises, fixtures, machinery and goodwill stand in the balance-sheet at £333,731. The trading account seems to be fairly comfortable however against £91,290 owing to the company by sundry debtors it owes creditors only £73,071, the difference in its favour being £18,219. Stocks are taken at £108,980 as certified by the directors. The debenture debt in 4½ per cent debenture stock is £100,000, and seems to be amply secured, but it is a pity that the dividend was increased at a time like the present when the reserve would have been bettered by the additional money.

Car and General Insurance Corporation.

This company's fourth year ended on September 30 last, and the report states that the nett income for that period was £171,336 as against £98,948 *pro rata* for the previous year. Claims paid came to £59,037 and working expenses and commissions, after deducting one-twelfth carried to agency establishment and extension expenses, that is we presume the capital account, amounted to £62,611 or about 37 per cent. of the premium income. The directors, however, set aside £19,618 to meet outstanding claims together with £57,112, or one-third of the nett premium income, to meet unexpired risks, these making with £2,500 placed to reserve last year a total provision of £79,230 for outstanding claims and unexpired liability. After all this they bring out a free revenue, including £4,434 received as premium on shares, of £16,273, and out of this a modest dividend of 5 per cent. together with a bonus of 3d. per share, taking in all £2,181, is recommended. Besides, £9,000 is written off the special agency charge, reducing this item to £4,514, and £3,500 is added to the reserve fund. All this done, £1,592 will be left to carry forward. Investments of all kinds, including £35,000 in Consols, figure in the balance-sheet at £64,948, and there is an item of £33,364 set against agents' balances less provision for agents' commission and doubtful debts. This seems rather a large figure.

Rowley Regis Granite Quarries, Limited.

Profits for the year ended September 30 amounted to £9,260, and with £1,869 brought forward gave a total of £11,129 to be dealt with. Debenture and other interest took £470, and depreciation of plant and machinery £650, and after transferring £1,500 to reserve for repayment of debentures and for redemption of leasehold property and goodwill and paying administration charges £8,063 was left. Preference dividend having been paid, the ordinary shares get 6 per cent. and £2,000 is put to reserve leaving £1,383 or £486 less to be carried forward. Leasehold property and goodwill at cost are valued at £69,835 and freehold property at £3,331 against which the reserves will now stand at £10,250 or 14 per cent. as the result of eight years' accumulations. Plant, machinery, &c., less depreciation, come to £12,883. With a paid-up capital of £78,005 the debenture debt is modest at £5,045, but in addition £4,299 is due to the vendor's estate for balance of purchase price and interest. Creditors, however, are light at £5,221 against debtors £14,071 and stocks £2,562, and as cash amounts to £4,232 the position seems comfortable enough.

D. Jones Dickinson and Co., Limited.

Gross profits for the year ended October 5 amounted to £8,656, and sundry expenses, including £447 depreciation of plant, &c., deduct £1,267, leaving, with £421 brought in, £7,389 to be dealt with. Dividends of 6 per cent. on preference and 5 per cent. on ordinary shares, less income-tax, and £1,000 written off property absorb £6,659, leaving £730 to go forward. Property is entered at £79,862, stock-in-trade £22,901, debtors £42,697, allowing for £2,838 depreciation, which does not appear to have been set aside. Cash, £1,752. The company owes creditors £16,442, showing a favourable trade balance of £26,255. As regards the reserve of £6,000, criticism is naively disarmed by the statement that it is employed in the business.

Victoria Pier and Promenade Hotel Co., Southport.

An unpropitious summer reduced receipts again. This time the restaurant as well failed to keep up its advance of last year, taking £174 less at £3,433. Hotel takings declined £527 to £13,104, the total £16,690 showing a reduction of £351. Expenses and outgoings were £220 less at £15,340, leaving £1,350 nett profit. With £384 brought in £1,734 is available. A dividend of 2½ per cent. absorbs £1,500, and £234 is carried forward. Property account is unchanged at £71,626, and stocks in hand are valued at £2,258. Debtors owe £227 and creditors want £755, or £100 less than last year. Cash is £2,080, and suspense account for repairs, &c., with rates, &c., paid in advance are still credited at £1,300. The company owes £16,000 on a mortgage.

Variety Theatres Consolidated, Limited.

Notwithstanding the strike of music hall artists in January and February last, the gross takings of this company for the year ended September 30 amounted to £77,143, of which outgoings, including £875 for repairs and renewals and £726 for depreciation of furniture, &c., took £64,019, leaving a nett profit of £13,124. Adding £3,426 brought forward the available total was £16,550, and as the directors do not trouble about such prosaic things as a reserve fund, they are able, after writing £3,000 off premises, goodwill and licences account, to pay a dividend of 7 per cent. Outlay on freehold and leasehold premises, goodwill and licences, less the sum now written off, stands at £209,185, in addition to which freehold shops at Walthamstow are valued at £2,362 and furniture, fittings, &c., come to £4,116, and with figures like these the directors would be prudent to make a beginning with a reserve fund. Creditors at £2,847 are more than double the sum to come in from sundry debtors, but £8,077 is held in cash and £1,900 is invested in L.C.C. 3 per cent. stock.

THE CHICAGO GREAT WESTERN RAILWAY COMPANY.

The London Finance Committee have to announce that application was made this week for a Receivership by a creditor in the Federal Court of the United States, for the States of Minnesota, Iowa, Kansas, and Missouri. The London Finance Committee joined in the application, and the Court selected Charles H. F. Smith, of St. Paul, to act with the president, A. B. Stickney, as receivers. The integrity of the property has thus been preserved, and the status of every creditor and security holder in the order of their priority. The notes rank ahead of the debenture and other stocks. It will be necessary that the claims of all the noteholders be presented to the Court for allowance. Noteholders are informed that they can send their notes to the London Finance Committee, care of Messrs. Robert Benson and Co., 66, New Broad Street, London, E.C.; the Committee's receipts in due form will be issued for notes so deposited, and the Committee will arrange to have such notes duly presented to the Court for allowance without expense to the noteholders.

Another circular, signed by Mr. Walter Cunliffe, after giving cogent reasons for the receivership, goes on to state that the London Finance Committee will proceed to recommend the creation of a mortgage upon the undertaking (which at present has no mortgage upon it) in order to provide for all the notes, and such necessary capital expenditure as can be foreseen. He also explains that during the six months ending December 31, 1907, the company suffered from a strike at its repairing shops, crippling its engine power. The strike is now practically over, but it remains to restore the engine power to good condition. Moreover, general conditions are making for declining traffic, and the nett revenue for the year 1907-8 is sure to be less than last year. For the past eight fiscal years ending June 30, 1907, the nett revenue, after deducting working expenses and taxes, has averaged over $2,100,000, and for 1906-7 it was $2,339,279, against fixed charges (for 1906-7) as follows:—Rentals (for sundry running powers, &c.), $424,330; interest on notes, $455 939; total, $880,269; leaving a balance of $1,459.010, from which interest on 4 per cent. debenture stock took $1,044,984, making the final surplus $414,026. Apart from the car trusts amounting to $1,228,968, the notes constitute the only terminable debt of the Chicago Great Western Railway, which (excluding 741 miles of leased and proprietary lines) owns in fee 756 miles of line, together with terminals in cities and rolling stock, the latter item alone having cost about $10,000,000.

MINING RETURNS.

Abbontiakoon Block 1.—Crushed 5,350 tons, fully treated 5,334 tons, yielding 2,007·8 ozs. from plates, and 988·7 ozs. from slimes and sands; total, 2,996.5 ozs.

Akrokerri (Ashanti).—Crushed 3,280 tons, 1,446 ozs.; tailings. 1,950 tons, 202 ozs.; total, 1,648 ozs.

Angelo Gold.—27,000 tons, 11,759 ozs.; profit, £24,245.

Ashanti Goldfields, Obuasi.—Crushed 4,841 tons, 1,529 ozs.; tailings, 224 ozs.; product from roasting plant, 1,100 ozs.; total, 2,835 ozs.

Ashanti Goldfields Auxiliary.—Recovered, 367 ozs.; value, £1,468.

Associated Gold.—Treated, 10,175 tons; yield, £21,094.

Associated Northern Blocks.—Milled, 3,740 tons ore; treated 1,405 tons slimes; yield £12,194.

Balaghat.—4,700 tons, 2,322 ozs.; from plates 179 ozs.; tailings 4,368 tons, 346 ozs.; total, 2,847 ozs.

Barrett Gold.—272 ozs.; value £950.

Bibiani.—Crushed 3,357 tons, 1,200 ozs.; cyanide 2,530 tons, £1,708; total, 1 601 ozs.

Bonanza.—Crushed 2,685 tons, 467 ozs.; cyanide and slimes 2,786 tons, 680 ozs.; total, 1,147 ozs.; profit, £1,925.

Briseis.—Black tin cleaned up 69 tons 7 cwts. Black tin cleaned up from New Brothers Home No. 1 35 tons. Briseis Company's proportion of month's total output 89 tons 13 cwts.

Broken Hill Proprietary Block 10.—Treated 8,209 tons crude ore, producing 1,470 tons concentrates containing 867 tons lead and 47,040 ozs. silver.

Broken Hill South Silver.—15,725 tons crude ore produced 2,581 tons concentrates, containing 1,936 tons lead and 49,039 ozs. silver.

Broomassie.—Crushed 1,844 tons, 1,773 ozs.

Buffelsdoorn Estate.—Slimes, 4,185 tons, 558 ozs.; profit, £789.

Burbank's Birthday.—Crushed 380 tons, 371 ozs.; cost per ton milling, 9s. 7d.

Burbank's Main Lode (1904).—Crushed 1,197 tons, 645 ozs.; by cyanide, 1,019 tons, 182 ozs.; total, 827 ozs.

Burma Ruby.—Washed 160,000 loads, producing rubies valued Rs.107,000; royalties, Rs.17,000.

Cape Copper.—Ookiep: 1,083 nett tons 15 per cent., equal 162 tons fine copper. Nababeep: 4,590 nett tons 4 per cent., equal 183 tons fine copper; total, 345 tons fine copper.

Carrington's United.—Smelted 103 tons for 10 tons copper, 39 ozs. gold, 89 ozs. silver.

Cason.—32,000 tons, 13,408 ozs.; profit, £26,799.

Champion Reef.—14,375 tons, 7,958 ozs.; tailings, 18,449 tons, 2,407 ozs.; total, 10,365 ozs.

Chillagoe.—Treated—3,172 tons lead ore; producing 500 tons lead bullion; containing 550 tons lead and 37,721 ozs. silver. Also 1,195 tons flux ore treated; producing 83 tons lead, and 7,799ozs. silver.

Chinese Engineering.—Output, 24,000 tons; sales, 17,500 tons; consumption, 1,600 tons.

Cobalt Townsite Silver.—Shipped 21 tons, value 550 ozs.

Consolidated Langlaagte.—8,014 ozs. from 24,022 tons; profit, £10,422.

Crown Deep.—Crushed 33,150 tons, 9,871 ozs.; 20,000 tons sands, 4.163 ozs.; 11,520 tons slimes, 1,209 ozs.; taken from reserve, 7,401 ozs.; total, 22,644 ozs.; profit, £66,050.

Crown Reef.—Crushed 23,500 tons, 5,118 ozs.; 15,802 tons sands and concentrates, 2,209 ozs.; 10,966 tons slimes, 1,089 ozs.; dump

process, 1,297 ozs.; taken from reserve, 3,252 ozs.; total, 12,965 ozs.; profit, £34,170.

Dharwar Reefs.—Crushed 1,059 tons, 556 ozs.; tailings assay per ton, 5 dwt. 7 grs.

Driefontein Consolidated.—Crushed 29,000 tons, 10,499 ozs.; profit, £18 090.

Duff Development.—Prospecting dredge, 18 ozs.; No. 1, 28 ozs.; No. 2, 18 ozs.; No. 3, 32 ozs.; total, 439 ozs.

Durban Roodepoort.—Quartz milled, 12,240 tons, 2,743 ozs.; tailings, 8,860 tons, 1,114 ozs.; slimes, 3,705 tons, 215 ozs.; total, 4,072 ozs.

Durban Roodepoort Deep.—Crushed 12,360 tons, 3,390 ozs.; sands 8,544 tons, 1,107 ozs.; slimes 3,850 tons, 288 ozs.; total, 4,785 ozs.; profit, £4,400.

Ferreira Deep.—Crushed 23,150 tons, 9,594 ozs.; sands 16,868 tons, 4,257 ozs.; slimes 6,332 tons, 625 ozs.; taken from reserve, 3,471 ozs.; total, 17,947 ozs.; profit, £49,050.

Ferreira Gold.—Crushed 22,690 tons, 8,841 ozs.; sands and concentrates 15,400 tons, 2,876 ozs.; slimes 8,563 tons, 1,099 ozs.; from reserve 2,180 ozs.; total, 14,966 ozs.; profit, £39.705.

French Rand.—Crushed 17,610 tons, 3,040 ozs.; sands and concentrates 12,800 tons, 1,512 ozs.; slimes 7,132 tons, 540 ozs.; total, 5,092 ozs.; profit, £3,008.

Geldenhuis Deep.—Crushed 32,520 tons, 7,503 ozs.; sands 22,576 tons, 2,828 ozs.; slimes 10,866 tons, 655 ozs.; taken from reserve, 1,856 ozs.; total, 12,842 ozs.; profit, £24,300.

Geldenhuis Estate.—Crushed 19,020 tons, 3,626 ozs.; tailings 1,958 ozs.; slimes 456 ozs.; dump by the "Star" process 204 ozs.; total, 6,244 ozs.; profit, £11,784.

Giant of Rhodesia.—Treated 5,173 tons, 2,701 ozs.; profit £5 855.

Ginsberg.—11 654 tons, 3,737 ozs.; profit, £3,679.

Glen Deep.—Crushed 21,235 tons, 4,811 ozs.; sands 13,650 tons, 2,160 ozs.; slimes 7,485 tons, 612 ozs.; total, 7,583 ozs.; profit, £10,200.

Glencairn Main Reef.—4,635 ozs. from 20,500 tons; profit, £4,553.

Glencoe (Natal) Collieries.—48,378 tons; estimated profit, £9.500.

Globe and Phœnix.—Crushed 6,345 tons, 2,734 ozs.; cyanide 4,064 tons, 397 ozs.; slimes 1,5 0 tons, 205 ozs.; total, 3,336 ozs.

Glynn's Lydenburg.—Crushed 2,952 tons, 514 ozs.; cyanide 1,927 tons, 731 ozs.; slimes 1,025 tons, 429 ozs.; total, 1,674 ozs.

Golden Horseshoe.—Ore treated 23,195 tons, 12,295 ozs.

Golden Pole.—Crushed 1,476 tons, 629 ozs.; sands 1,520 tons and concentrates seven tons, 276 ozs.; total, 905 ozs

Great Boulder Proprietary.—13,450 tons, yielding 12,077 ozs.; tailings (old) 10,590 tons, 1,246 ozs.; total, 13,323 ozs.

Great Cobar.—Tonnage treated 6,803 tons, output matte 848 tons; contents, 271 tons copper, 815 ozs. gold, 5,555 ozs. silver, ingot copper 133 tons; despatched, 104 tons.

Great Fingall.—22,257 tons, 3,669 ozs.; tailings 21,818 tons, 2,427 ozs.; concentrates 439 tons, 2,202 ozs.; total, 8,298 ozs.

Hainault.—6,227 tons, 1,811 ozs.

Hutti (Nizam's).—893 ozs. from 2,250 tons crushed; tailings 200 ozs. from 2,100 tons; total, 1,093 ozs.

Ida H. Gold.—1,000 tons crushed, 698 ozs.

Ivanhoe.—Crushed 19,840 tons, 3,546 ozs.; sands 9,250 tons; 1,659 ozs.; slimes 8,990 tons, 2,593 ozs.; concentrates 1,600 tons, 2,344 ozs.; total, 10,142 ozs.; profit, £21,140.

Jubilee.—Crushed 4,862 tons, 1,205 oz.; cyanide 3,671 tons, 565 ozs.

Jumpers.—Crushed 9,850 tons, 3,348 ozs.; tailings 1,216 ozs.; current slimes 294 ozs.; accumulated slimes 228 ozs.; total, 5,080 fine gold; profit, £4,502.

Jumpers Deep.—Crushed 19,050 tons, 4,840 ozs.; sands 12,580 tons, 1,418 ozs.; slimes 5,936 tons, 868 ozs.; total, 6,626 ozs.; profit, £4 050.

Kalgurli.—11,009 short tons, 7,389 ozs.

Kelly's Queen Block.—Treated 767 tons quartz, value £2,212.

Killarney Hibernia.—Crushed 1,406 tons, 280 ozs.

Knights Deep.—41,160 tons, 13,000 ozs.; profit, £20,736.

Koffyfontein.—5,400 carats diamonds, 280,000 loads of blue ground on floors.

Lace Diamond.—Loads washed, 35,705; 25 days; 3,068 carats; yield per 100 loads, 8·59.

Lake View Consols.—11,697 tons, 3,252 ozs.; profit, £1,144.

Lancaster.—Crushed 13,250 tons, 1,499 ozs.; cyanide, 10,220 tons, 1,080 ozs.; total, 2,579 ozs.; loss, £2,975.

Lancaster West.—Crushed 6,675 tons, 1,187 ozs.; cyanide, 5,624 tons, 973 ozs.; total, 2,160 tons; profit, £1,870.

Lancefield.—7,232 tons, 2,508 ozs.

Langlaagte Deep.—Crushed 33,125 tons, 7,687 ozs.; sands 22,311 tons, 2,782 ozs.; slimes 11,366 tons, 702 ozs.; taken from reserve, 2,504 ozs.; total, 13,675 ozs.; profit, £23,000.

Le Roi.—Shipped 8,894 tons, containing 2,250 ozs. gold, 4,600 ozs. silver, and 203,600 lbs. copper.

Le Roi No. 2.—Shipped 160 tons; nett receipts, £1,252, being payment for 100 tons concentrates shipped.

Luipaards Vlei.—Crushed 15,600 tons, 2,605 ozs.; tube mills 689 ozs.; cyanide 1,403 ozs.; slimes 263 ozs.; total profit, £7,497.

May.—Crushed 15,475 ton, 3,182 ozs.; cyanide 10,925 tons, 2,062 ozs.; slimes 4,164 tons, 299 ozs.; total, 5,546 ozs.; profit, £11,615.

Mertons Reward.—Crushed 636 tons, 254 ozs.; sands 414 tons, 66 ozs.; slimes 204 tons, 37 ozs.; total, 357 ozs.

Meyer and Charlton.—Crushed 12,880 tons, 1,975 ozs.; 2,966 ozs. from cyanide; total, 4,943 ozs.; profit, £8,442.

Mount Boppy.—Clean up from 7,070 tons gave 1,309 ozs.; cyanide, 4,498 tons, 1,816 ozs.; slimes, 2,166 tons, 1,045 ozs.; concentrate, 27 tons, 130 ozs.; total, 4,300 ozs.

Mount Lyell.—Treated 30,443 tons of ore. In addition, 1,227 tons purchased ore and metal-bearing fluxes. Converters produced 659 tons blister copper, containing—copper, 651 tons; silver, 55,595 ozs; gold, 1,515 ozs.

Mount Morgan (Queensland).—15,922 tons ore, 7,371 ozs.; treated 9,562 tons ore, and metalliferous flux, and producing 322 tons blister copper, containing 319 tons copper, and 3,542 ozs gold.

Myalls and Peak Hill.—Treated 3,750 tons, 565 ozs.

Mysore Gold.—16,738 tons, 15,519 ozs.; tailings 15,070 tons, 2,053 ozs.; steamings from plates, 1,348 ozs.; base bar mills, 7 ozs.; melted copper plates mills, 372 ozs.; total, 19,057 ozs.

Mysore West, Mysore-Wynaad.—Cyanided 2,490 tons, 257 ozs.

New Comet.—Milled 24,590 tons, 5,429 ozs.; profit, £12,4[illegible]

New Goch.—Crushed 22,103 tons, 4,522 ozs.; from cyanide 2,497 ozs.; total, 7,019 ozs.; profit, £9,007.

New Heriot.—Crushed 9,500 tons, 4,784 ozs.; profit, £8,758.

New Kleinfontein.—Milled 33,498 tons, 8,556 ozs.; sands 22,813 tons, 3,033 ozs.; slimes 10,735 tons, 843 ozs.; total, 12,432 ozs.; profit, £19,900.

New Modderfontein.—Crushed 23,536 tons, 6,962 ozs.; sands and concentrates 14,630 tons, 2,196 ozs.; slimes 11,842 tons, 1,104 ozs.; taken from reserve, 2,392 ozs.; total, 12,744 ozs.; profit, £28,136.

New Primrose.—19 020 tons, 7,842 ozs.; profit, £15,241.

New Rietfontein.—17,267 tons, 8,919 ozs.; profit, £16,213.

New Unified Main Reef.—10,133 tons, 3,296 ozs.; profit, £3 480.

New Vaal River Diamond.—Diamonds registered by the diggers, £2,250.

New Zealand Crown.—Crushed 1,449 tons, value, £3.691.

Nigel.—Crushed 10,000 tons, 4,446 ozs.; profit, £7,134

North Broken Hill.—Treated 912 tons crude ore assaying [illegible] per cent. lead, and 6·8 ozs. silver, producing 160 tons concentrates, containing 113 tons 13 cwt. lead, and 3,360 ozs. silver.

North White Feather.—Crushed 1,400 tons, 694 ozs.

Nourse.—Crushed 20,340 tons, 8,351 ozs.; sands 20,987 tons, 3,521 ozs.; slimes 9,408 tons, 638 ozs.; taken from reserve 1,208 ozs.; total, 13,718 ozs.; profit, £23,550.

Nundydroog.—7,040 tons, 5,817 ozs.; tailings 6,750 tons, 474 ozs.; from plate 800 ozs.; total, 7,091 ozs.

Ooregum.—10,685 tons, 5,376 ozs.; tailings 8,352 tons, 871 ozs.; base bar 419 ozs.; scalings 3,200 ozs. gold; total, 9,366 ozs.

Oriental Consolidated.—Crushed 26,584 tons; profit, U.S. gold, £53,281.

Oroya Black Range.—Crushed 4,122 tons, 2,449 ozs.

Oroya-Brownhill.—Crushed 11 800 tons, 7,084 ozs.

Prestea Block A.—Crushed 7,490 tons, 2,865 ozs.; tailings 4,895 tons, 680 ozs.; total, 3,545 ozs.

Princess Estate.—Crushed 9,263 tons, 2,953 ozs.; cyanide 5,630 tons, 1,055 ozs.; total, 4,008 ozs.; profit, £4.737.

Queensland Copper.—Ore treated 1,197 tons; production, 250 tons matte, containing 139 tons fine copper; shipment, 143 tons matte.

Rhodesia Consolidated.—Crushed 1,690 tons, 1,048 ozs.; cyanided 746 tons, 332 ozs.; total, 1,380 ozs.

Roberts Victor Diamonds.—21.589 loads washed, producing 9,390¾ carats, equal to 43·4 carats per 100 loads.

Robinson Central Deep.—Crushed 19,470 tons, 8,022 ozs.; sands and concentrates 11,200 tons, 2,730 ozs.; slimes 7,486 tons, 831 ozs.; taken from reserve, 5,688 ozs.; total, 17,271 ozs.; profit, £56 301.

Robinson Deep.—40.236 tons, 16,624 ozs.; profit, £26.556.

Robinson Gold.—Crushed 40,000 tons, 16,328 ozs.; sands and concentrates 26,044 tons, 6,919 ozs.; slimes 13 386 tons, 1,824 ozs; taken from reserve, 9,210 ozs.; total, 34,281 ozs.; profit, £116,216.

Roodepoort Central Deep.—Crushed 8,640 tons, 2,213 ozs.; cyanide 6,017 tons, 1,080 ozs.; total, 3.293 ozs.; profit, £3,213.

Roodepoort United.—Crushed 15 515 tons, 4 027 ozs.; from cyanide 2,294 ozs.; total, 6,321 ozs.; profit, £10,072.

Rose Deep.—Crushed 35,000 tons, 7,249 ozs.; sands 22,620 tons, 2,529 ozs.; slimes 12,639 tons, 701 ozs.; total, 10,479 ozs.; profit, £16,000.

St. John Del Rey.—Gold produce £27,490; yield per ton, ·66 of an ounce troy.

Selukwe.—Crushed 6,305 tons, 1,989 ozs.; tailings assay 2.38 dwt. per ton; cyanide 3,850 tons, 590 ozs.

Sheba.—5,600 tons, 2,072 ozs., after including by-products

Simmer and Jack.—64,010 tons, 24,798 ozs.; profit, £51,243.

Simmer and Jack East.—26,260 tons, 7,945 ozs.; profit, £1,165.

Sons of Gwalia.—Crushed 13,050 tons, 3,045 ozs.; tailings 7,550 tons, 1,112 ozs.; concentrates 216 tons, 597 ozs.; slimes 5,090 tons, 441 ozs.

Talisman.—2,975 tons; value, £14,039.

Tasmanian Smelting.—Silver-lead bullion shipped contained 1,620 tons lead, 136,000 ozs. silver, 182 ozs. gold.

Tomboy.—Crushed 8,900 tons; value, $61,500; concentrates shipped 435 tons; value, $26,400; profit, $39.900.

Tyee.—110 tons Tyee ore, value, after deducting refining charges, $1,747; 2,660 tons customs ore; 2,770 tons, producing 278 tons matte.

Van Ryn.—Crushed 22,622 tons, 6,783 ozs.; sands 15,[illegible] tons, 2,176 ozs.; slimes 7,465 tons, 628 ozs.; total, 9,587 ozs.; nett profit, £17,037.

Vereeniging Estates.—Output of coal, 26,780 tons.

Village Deep.—Crushed 27,500 tons, 5,520 ozs.; sands and concentrates, 20,102 tons, 3,221 ozs.; slimes, 7,270 tons, 625 ozs.; total, 9,366 ozs.; profit, £10,000.

Village Main Reef.—Crushed 40,000 tons, 8,838 ozs.; sands and concentrates, 29,430 tons, 5,053 ozs.; slimes, 13,749 tons, 1,035 ozs.; total, 14,920 ozs.; profit, £27,388.

Vivien.—3,036 tons, 668 ozs.; tailings, 2,000 tons, 257 ozs.; concentrates, 52 tons, 49 ozs.; slimes, 951 tons, 46 ozs.

Voorspoed Diamond.—18,211 loads washed, producing 3,720 carats.

Wanderer (Selukwe).—Cyanide 13,434 tons, 1,477 ozs.

Wassau (Gold Coast).—Crushed 4,000 tons, 1,155 ozs.; cyanide, 2,975 tons 397 ozs.; total, 1,552 ozs.

Whim Well Copper.—Shipped 109 tons of copper ore assaying 28 per cent.

Willoughby's Consolidated.—Queen's Mine: Crushed 1,435 tons, 489 ozs.; cyanide, 1,216 tons, 157 ozs.

Windsor.—Crushed 4,943 tons, 1,004 ozs.; cyanide 3,555 tons, 764 ozs.; total, 1,768 ozs.

Witwatersrand Gold.—10,785 ozs. from 35,010 tons; profit, £17,026.

Worcester Exploration.—Crushed 4,700 tons, 1,187 ozs.

DIVIDENDS ANNOUNCED.

BANKS.

Bank of Bengal.—For past half-year at the rate of 10 per cent. per annum, together with a bonus of 1 per cent., placing Rs.2,50,000 to reserve, Rs.1 50,000 to premises account, Rs.50,000 to pension fund, and carrying Rs.2,50,000 forward.

Peel River Land and Mineral.—Winchester House, 1 p.m.
South Kalgurli Gold Mines.—Salisbury House, 2.30 p.m.

Letters to the Editor.

Dear Sir,—I have taken your paper almost ever since it started, and, generally speaking, I agree with your conclusions. But on one point I wish for enlightenment. It is stated that exports and imports must pay for each other, but the balance of exports in Australia is apparently about twenty-five millions more than the imports. Will you explain how that difference is made up?

Yours truly,

W. Breffit.

Castleford, Yorks, January 8, 1908.

[Debt interest due in London, freight and insurance on goods shipped both ways and other charges have all to be met out of the excess of exports over imports.—Ed.]

COMPANY MEETINGS.

CRYSTAL PALACE.

The ordinary general meeting of the shareholders of the Crystal Palace Company was held on Monday at the Cannon Street Hotel, E.C., Mr. Ernest Schenk, the Chairman of the company, presiding.

The Secretary (Mr. J. H. Cozens) read the notice and the auditors' report.

The Chairman: At the last general meeting the company's Bill in Parliament authorising the creation of new cumulative preference shares was approved, and I informed you that £50,000 of these preference shares had been underwritten subject to the necessary Parliamentary sanction being obtained. You were in due course notified that the Bill had been passed, and you may naturally have assumed that the company has enjoyed the full advantages expected from it, including the £50,000 of new capital underwritten. You will recollect that I informed you that the underwriting had been obtained upon a prospectus showing that the profits for the previous three years had averaged over £20,000 per annum, more than sufficient to cover all debenture and loan interest, and the interest upon the proposed new preference shares. During the period that we were awaiting Parliamentary sanction for the new capital there was, unfortunately, a decline in the rate of profits, owing mainly to the insufficiency of working capital, and a majority of the underwriters repudiated their contracts. I propose to say nothing as to the merits of the dispute, which, after protracted negotiation, has at last been amicably settled by a compromise, nor is it now necessary for me to enlarge upon the exceedingly difficult financial position which was suddenly created by the totally unexpected failure of the £50,000 of underwriting now that the difficulties have to such a large extent been overcome. Stated briefly, the steps taken to effect this were:—Firstly, the sale of a water tank and about half-an-acre of land to the Metropolitan Water Board, which realised £7,000; secondly, the settlement of certain outstanding liabilities by an issue of third debenture stock; thirdly, the renewal of certain loans for periods of from five to twenty-five years; and, fourthly, a compromise with the underwriters under which a sum of about £12,500 has been received in cash against an issue of third debenture stock. Since the last meeting there have been two changes in the direction and management of the company. Captain the Hon. Arthur Somerset, finding it impossible to continue to devote the large amount of time necessary to the administration of the company's business, to our great regret, resigned his seat on the board, and Mr. Louis Sinclair has been appointed in his place. Mr. J. H. Cozens, who in the emergency caused by the deaths of Mr. Gillman and Mr. Gardiner, filled the dual position of secretary and general manager, found the combined duties impossibly heavy, and we have been very fortunate in securing the services as general manager of Mr. George Starr, Mr. Cozens remaining as secretary and business manager. No opportunity has been lost of effecting economies wherever possible without cutting into the quick of the undertaking, and perhaps the most notable success gained in this direction has been our appeal against our rating assessment, resulting in a saving of about £1,000 a year. In several other directions we have after careful consideration effected small economies, the aggregate result of which will have their effect upon our future accounts. For the coming season a Mexican Exhibition has been arranged, and if we should be spared a recurrence of the persistently unfavourable weather which ruined our last summer season there is every reason to expect that we shall be able to show a satisfactory balance of profit at the end of 1908. It will interest you to know that for the past twelve months the number of paid admissions show an increase of over 17,000 over the previous year. The only other matter of importance to which we have to call your attention is the Bill which has been deposited in Parliament, and which was discussed at a special meeting of debenture holders this morning. I am happy to say that, although, of course, it does not meet with universal approval, it was agreed this morning that the Bill should be referred to three separate committees of first, second, and third debenture holders to consider in detail and report to the Wharncliffe meeting, which will be held later on. I have personally great hopes that by mutual concessions, and with time to consider in detail the effect of the provisions of the Bill, it will be possible to arrive at an understanding which will be satisfactory to all three classes of debenture holders.

Mr. W. B. Keen seconded the resolution, which was carried unanimously.

NEW AFRICAN COMPANY.

The 13th annual ordinary general meeting of the shareholders of the New African Co., Limited, was held yesterday at Cannon Street Hotel, E.C., Sir Charles Euan-Smith, K.C.B., C.S.I. (chairman of the company), presiding.

The Secretary (Mr. Thomas Day) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said the greater part of the year was mainly characterised by an almost constant decline in the price of all securities, and especially in those shares connected with exploration and mining, in which the New African Company was by its constitution mainly interested. It was therefore absolutely impossible for them to carry out during the continuance of this fall any profitable realisation; their energies had to be directed to maintaining the enterprises in which they were concerned, and their efforts had been given day by day throughout the year to so protecting and furthering those interests as to be in a position to profit by any favourable change. It was no bad thing that the directors had, naturally, the most arduous and anxious work; they were, however, able during the early part of the year, before the serious fall set in, to carry out some advantageous transactions, and were thus in a position to make the distribution of the interim dividend issued after the last meeting. Active prospecting operations had been continued, in co-operation with other Johannesburg mining houses, on the tin property in the Rooiberg districts mentioned last year. This had shown remarkable results, and the whole of the interest would very shortly be turned over to a parent company, which would acquire the option to purchase a block of four farms, and further exploit the tin lodes which had been proved to exist on them. In the opinion of the engineers, there was no likelihood of any want of permanency at depth. The portion now being opened up was selected at random amongst the ancient workings, and there was no reason to believe that a specially rich portion had been hit upon at the very start. As to their interests in the Welgedacht company, the shares had now reached an unjustifiably low figure, mainly in consequence of forced realisations. The Mozambique Company had throughout the bad times of last year succeeded in maintaining its revenue of £128,000, and, further, in covering its African expenditure thereby. This company possessed assets of great value, including the port and township of Beira. Its proximity to the chief mining centres of Northern Rhodesia and of Katanga seemed bound to bring benefits to Beira and the Mozambique Company. With regard to their interests in the Ethiopian Railway, the actual situation as to the railway was one of great delicacy, and he could not speak fully or freely. The treaty concluded recently between Great Britain, France and Italy stipulated that this railway should be extended to Addis Abeda under entirely French auspices. These matters were the subject of warm discussion in Paris, and he thought the British group, notwithstanding any appearances to the contrary, could rely upon the sense of justice of the French Government to propose a fair adjustment all round. As regarded Egypt and the Soudan, the steamer business worked by the Soudan Development and Exploration Company had made good progress. The New Egyptian Company had done good work in reclaiming lands on the Nile, and had paid a dividend of 10 per cent. They had in this company a very good asset. In West Africa, in which they were interested through their holding in the Taquah and Abosso Mines, affairs were more encouraging. The Abosso company had again paid a dividend of 10 per cent., and they had good prospects from the Taquah mine. Turning to Australia, the Conrad mine had so far not realised the expectations of the engineers, who were, however, still sanguine of good results. As regarded the Marconi Company, after seven years' incessant work, there had been brought a satisfactory consummation to the endeavours to establish communication across the Atlantic on a commercial basis. The system was now earning money, and there was no reason why the company should not prove very successful. In conclusion, the Chairman said that he hoped next year the markets would be improved all round, and he would be able to report that profitable realisations had been made.

Baron de la Chevreliere seconded the adoption of the report, and it was carried unanimously.

The Chairman was re-elected a director, and Messrs. Cooper Bros. having been reappointed auditors, the meeting terminated with a vote of thanks to the chairman.

Considerable misapprehension exists as to which of the English shipbuilding yards has the greatest output. In the case of most of the large firms such output comes from three or four yards under the same name, but, adopting this grouped method of compiling returns, it will be found that Furness, Withy and Co. [illegible] out some 20 per cent. higher even than William Doxford and Sons, of Sunderland, who have been placed in the van this past few years. For instance, the output of Furness, Withy and Co.'s Middleton shipyard, West Hartlepool, was last year [illegible] tons; the output from Irvine's Shipbuilding and Dry Dock Company at Hartlepool, of which Furness, Withy and Co. are sole owners, was 25,520 tons; while from the Northumberland Shipbuilding Company, Howden-on-Tyne, of which Sir Christopher Furness is chairman, and the controlling interest of which is held by Furness, Withy and Co., 48,250 tons were produced, making in all a total of 110,378 tons. In addition, Furness, Withy and Co. were so busily employed in the early part of the year that many of their orders were sub-let to other firms, 40 ships being built in this way. Altogether, the tonnage launched by and for Furness, Withy and Co. during 1907 amounted to nearly 180,000. Messrs. Furness, Withy and Co. also undertake to a very large extent salvage work, and have just successfully refloated the Norwegian steamer *Hansa*, which recently stranded near the entrance to the West Hartlepool harbour.

Mr. W. A. McArthur has resigned his seat on the board of the Bank of Australasia.

Mr. Allan Ernest Messer, of the firm of Messrs. Lawrance, Webster, Messer & Taylor, of No. 14, Old Jewry Chambers, E.C., Solicitors, has joined the board of the British Law Fire Insurance Company, Ltd., of Lothbury, London, E.C.

CAPE OF GOOD HOPE CONSOLIDATED 3½ % STOCK

ISSUE OF £1,020,700.

Price of Issue, £93 10s. 0d. per cent.

Interest payable 1st JANUARY and 1st JULY.
Six Months' Interest payable 1st JULY, 1908.

Principal repayable at par 1st JULY, 1949, the Government of the Cape of Good Hope having the option to redeem the Stock at par on or after the 1st JULY, 1929, on giving twelve calendar months' notice.

The Government of the Cape of Good Hope having complied with the requirements of the Colonial Stock Act, 1900, as announced in the "London Gazette" of the 23rd October, 1903, **Trustees are authorised to invest in this Stock** subject to the provisions set forth in the Trustee Act, 1893.

THE LONDON AND WESTMINSTER, BANK, LIMITED are instructed by the Government of the Cape of Good Hope to offer for subscription the above amount of Stock, to be raised under the provisions of the following Acts of the Cape of Good Hope Legislature, viz.:—

Act No. 32 of 1906	..	£200,000 for Irrigation Works,
,, ,, 37 ,, 1906	..	100,000 ,, Local Works,
,, ,, 38 ,, 1906	..	720,700 ,, New and Additional Railway Works,

and in accordance with the powers granted by the General Loans Acts of 1881, 1883, 1888 and 1892.

The Stock offered will be in addition to and rank *pari passu* with the £14,416,873 19s. 1d. already created, and will be inscribed in accordance with the provisions of "The Colonial Stock Act, 1877," 40 and 41 Vict., cap. 59, in the books of the "Cape of Good Hope Consolidated 3½ per cent. Stock," kept by the London and Westminster Bank Limited—and will be transferable without charge and free of stamp duty at that Bank, either by the Stockholders personally or by their attorneys. The interest, at the rate of 3½ per cent. per annum, will be payable on behalf of the Government of the Cape of Good Hope at the London and Westminster Bank Limited, Lothbury, on the 1st January and 1st July in each year, by Dividend Warrants, which can be sent by post at the Stockholder's risk. The principal will be payable at the same Bank on the 1st July, 1949, but the Government of the Cape of Good Hope have the option of redemption at par, in London, on or after the 1st July, 1929, on giving twelve calendar months' notice by advertisement in the *London Gazette* and in the *Times* Newspaper, or by post to the then Stockholders at their registered addresses.

Stock Certificates to Bearer, of the denominations of £100, £500 and £1,000, with Coupons for the Half-yearly Dividends attached, will be obtainable in exchange for Inscribed Stock at the London and Westminster Bank, Limited, Lothbury, on payment of the prescribed fees, and such Certificates can be re-inscribed as Stock at the will of the holder.

The revenues of the Colony of the Cape of Good Hope alone are liable in respect of this Stock and the Dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of His Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the Dividends thereon, or for any matter relating thereto.—40 and 41 Vict., cap. 59, sec. 99.

Applications on the form prescribed will be received at the London and Westminster Bank, Limited, Lothbury, and must be for even hundreds of Stock, and be accompanied by a deposit of £5 per cent. on the nominal amount applied for.

The List will be Closed on or before WEDNESDAY, the 15th January, 1908.

In case of partial allotment, the surplus of the amount paid as deposit will be appropriated towards the payment of the instalment due on allotment.

Payment will be required as follows, viz.:—

£5	per cent. on application.	
£13 10s.	,,	,, 20th January, 1908.
£25	,,	,, 24th February, 1908.
£25	,,	,, 23rd March, 1908.
£25	,,	,, 27th April, 1908.
£93 10s.		

Payment may be made in full on the 20th January, or on any subsequent day, under discount at the rate of 3½ per cent. per annum.

If default be made in payment of the instalments at their due dates, the previous payments will be liable to forfeiture.

Scrip Certificates will be issued after payment of the amount due on allotment, and such Certificates will be convertible into Inscribed Stock on presentation at the LONDON AND WESTMINSTER BANK, LIMITED, Lothbury, as soon as they are paid in full.

Copies of the Acts creating the Loan can be seen at the LONDON AND WESTMINSTER BANK, LIMITED, Lothbury; and Forms of Application can be obtained at that Bank, or at any of its Branches; and of Messrs. R. Nivison & Co., 76, Cornhill, E.C.

LONDON AND WESTMINSTER BANK, LIMITED,
Lothbury, London, E.C.,
11th January, 1908.

BOOKS.

A GLOSSARY OF COLLOQUIAL, SLANG, AND TECHNICAL TERMS, in use on the Stock Exchange and in the Money Market. Edited by A. J. WILSON. Price 3s.

"A good deal of useful information is here presented in a very handy form."—*Times.*

"The work is a most useful one, and admirable in many respects."—*Pall Mall Gazette.*

The Law relating to Commission Agents, and more particularly Auctioneers, Estate and House Agents, and Public-House Brokers. By H. M. GIVEEN, B.A., of Lincoln's Inn and the Oxford Circuit, Barrister-at-Law; sometime Holder of the Inns of Court Studentship and of the Vinerian Scholarship.

"The manual is a marvel of lucidity, the arrangement of contents, cases cited and index having formed no small part of the labour involved in preparing the book."—*Dundee Advertiser.*

"The book cannot but prove welcome to a large body of business men as instructing them as to the legal principles and decisions in accordance with which their remuneration can be sued for."—*Scotsman.*

"We have here a desirable treatise on the principles governing the Agents right to payment. . . . Within the limits he has set himself, Mr. Giveen has produced a handy little book on a big subject."—*Glasgow Herald.*

NORFOLK HOUSE, NORFOLK STREET, STRAND, W.C.

The Times

WEEKLY EDITION.

Every Friday. Price 2d.

CONTAINS A CAREFUL

Epitome of the Events of Interest

DURING THE WEEK.

TOGETHER WITH THE MOST IMPORTANT

LEADERS AND SPECIAL ARTICLES FROM "THE TIMES"

IN EXTENSO.

1. Parliament (when sitting) and Politics.
2. Colonial and Foreign News.
3. Naval and Military matters.
4. Trade, Money, and Stocks.
5. Ecclesiastical and Social Notes.
6. Law and Police. Reviews of Books.
7. Home and Domestic Events.
8. Correspondence. Chess by Special Expert.
9. News Interesting to Every Class of Reader.

And a SERIAL STORY by a popular and well-known Author.

SPECIAL EDITIONS for India and Australasia, for Canada and the United States, and for South Africa, containing, in addition to the above, matter particularly interesting to dwellers in those countries.

The Times issues three Supplements every week, viz.:—

THE FINANCIAL & COMMERCIAL ON MONDAYS;
THE ENGINEERING SUPPLEMENT ON WEDNESDAYS;
THE LITERARY SUPPLEMENT ON FRIDAYS.

Purchasers of THE TIMES WEEKLY EDITION residing abroad can have *any one* of these Supplements as an inset with the Weekly Edition.

MAY BE HAD OF ALL NEWSAGENTS.

THE PUBLISHER

The Times Weekly Edition,

PRINTING HOUSE SQUARE. LONDON, E.C

Herewith remittance for £ : : Kindly forward regularly THE WEEKLY EDITION of THE TIMES with the ____ Supplement to the following address for ____ Month.

Printed for the Proprietors by ST. CLEMENTS PRESS, LIMITED, Newspaper Buildings, Portugal Street, Kingsway, London, W.C., and Published by CLEMENT WILSON, at Norfolk House, Norfolk Street, Strand, W.C.—JANUARY 11, 1908.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 524. New Series. SATURDAY, JANUARY 18, 1908. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and wil be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

A Further Note on the Evenness of Banking Profits.

Last week attention was drawn to the remarkable uniformity with which nett profits turn up each half-year with very little variation, no matter what the condition of business during the preceding six months has been. The puzzle thus presented by the uniformity of the figures is far from easy of solution, for surely if money is being lent at 6 or 7 per cent. and upwards, the profits ought to be much larger than when it is being lent at from 2 to 4 per cent. That is the impression the average man of business has, and he is, therefore, inclined to grumble, if a bank shareholder, that none of the gains of dear money seems to come his way. But this is not altogether reasonable, because many influences are at work when money is dear to curtail the profit-earning power of the banker. To begin with, when a banker is able, through the dearness of money in the open market, to offer 4 per cent. on deposits, current account balances are very apt to be transferred in part to deposit account, in order to take advantage of the higher rate of interest. This operation helps to sweep away part of the extra gains of the banker, but to what extent it does so we have no means of judging, because it is very rare for the bank balance-sheet to indicate the proportion of gross earnings devoted to the payment of interest to depositors. Indeed, the only bank that we can find following this commendable practice is the Union of London and Smiths. All the others appear to include the liability for interest to depositors in the gross amount of liabilities on deposit, current, and other accounts. This is a pity, because were comparative statistics available regarding the sums devoted each half-year to meet this liability, it would be in some ways easy to estimate the extent to which profits were impinged upon by payments of interest to depositors.

This, however, is only one element in the problem, and, perhaps, not the most important amongst those working to take away from the banker some of the benefits supposed to come to him through dear money. In all probability these very high rates of interest obtained by him in the course of his ordinary business for short periods also bring an increased loss and a greater number of accounts that require to be "nursed" or guarded against, losses on which must be provided for, even if not actually written off. The position of the bank customer, in short, is nearly always forgotten by the bank critic who is a shareholder. Such an individual looks only to what his investment yields him, and never goes on to inquire into the risks involved in the money-lending business, especially at critical seasons. Yet these risks are constant, even in the best of times, and in difficult times like those through which the country has been passing they become more than risks; they often acquire the importance of dangers. Customers who, when accommodation was to be got at 4 to 5 per cent. in the conduct of their business, could generally so adjust their dealings as to secure a margin of profit over and above the charges imposed by the borrowed capital with help of which they carried on, find their case altogether different when money becomes 6 to 8 per cent. Then the margin on profit tends to disappear, its

place is often taken by losses, and if the strain be long continued, these losses may end in an inability of the customer to carry on his business. His failure may then mean loss to the banker. More or less this kind of impass must soon be reached with many of the smaller customers of the banks, and probably some of the larger likewise, when money is very dear. A prudent banker will consequently make ample provision for losses in directions like these, and in doing so reduce the apparent gains of his business to much the usual figure. If dividends can be maintained, in such circumstances it is all shareholders should expect.

In another way likewise the banker may disguise or have to forego his profits—indeed, should be prepared to do so always—and that is by the larger rebate allowed in making up accounts on bills discounted and not yet due. Suppose a bank holds £2,000,000 of bills, the average usance of which is six weeks, on December 31, he must subtract the unearned interest represented by this unexpired term from the profits of the half-year before declaring them. If the Bank rate is 3 per cent., he may be justified in making his rebate allowance upon the basis of that figure, but if the Bank rate is 7 per cent., it follows that he ought to rebate at 7 per cent., and to the extent of the distention this larger allowance involves the apparent profits will be reduced. Influences of this kind thus tend to produce an appearance of uniformity in earning power, and when we add to them the further necessity referred to that imposed by the greater risks of ordinary and retail business when money is dear, the duty also to write down the book value of investments held, the wonder really is that profits are not smaller rather than larger in seasons like that through which the market has come.

Just consider what bankers have had to do—all of them who had regard for their safety, at least—during the past three or four years in the way of writing down the book price of their Consols and other high-class stocks. Bankers used to consider themselves perfectly safe from all danger of every kind when they took their Consols into the balance-sheet at 90. Some of them now take it in at 80, and no leading bank would dream of entering the price at a higher figure than 83. But Consols is not the only Government or investment stock held by our banks. They hold Indian stocks, Colonial stocks, Home Railway debenture and preference stocks, with, perhaps, a good many other securities that they never mention in balance-sheets, and on all of these the depreciation has been severe, often more severe even than that on Consols, at least, within the period named. If all depreciations of this kind have been attended to, then the gross profits of the banks must, as a rule, have been much larger than any ever shown, because, while most of the banks frankly set forth the price at which they take Consols and perhaps one or two other Government securities into their balance-sheet, they none of them treat their large holdings in Home Railway debenture and preference stocks after this fashion. There must consequently have been much secret writing down in order that the balance-sheet might be kept in a healthy condition, and when all this is taken into account, it is, we repeat, marvellous to see with what regularity and uniformity the money necessary to pay the usual dividend has been provided. But there has been no scope for increased dividends or bonuses.

"Times" Past and "Times" to Come.

Why the changes about to take place at the *Times* should be deemed almost a national affair we cannot make out, unless on the supposition that we really are a nation of snobs. Once upon a time the newspaper did occupy a dominant or dominating position as a swayer and manufacturer of public opinion, but it has long ceased to hold this place, and is now often one of the dullest papers published. It still, however, holds a supreme position as the receptacle of "letters to the Editor," as much so almost as when Mr. Macdonald was wont to describe it as—say, the mental slop-basin of Society (his phrase was more Rabelaisian)—and it supplies a certain amount of good foreign news, in spite of tariff predilections, and contains many special articles of a kind not to be found elsewhere; its law reports are also unmatched, but in the matter of political reporting its old comparative impartiality has long ago deserted it, and it is otherwise suffused with the prejudices of the decadents to a degree that has done not a little to obliterate its former influence. Old traditions, however, cling around it, and it is still the great *journal de la cité* in the estimation of bankers and dealers in money, in spite of many shocks given to its prestige in former days. It has held this position, partly by help of tradition and snobbism, through all the scandals of the past, which need not now be raked up, and at present fairly deserves to hold it, for its City department is to-day conducted with quite unusual ability, knowledge, judgment, and independence.

And the *Times* has always been, and is to all appearance in future to be, the organ of *la haute finance*. It must express the views of the great finance houses, and retail the information supplied by them, else the life of the City editor would be a troubled one, and its criticisms, when indulged in, must never penetrate very far beneath the surface. We know of one City editor who once raised a fearful storm in Printing House Square by saying something that did not please the Rothschilds. The late Mr. Delane was so incensed that he talked of "suppressing the money article altogether" if this sort of outspokenness could not be prevented. Happily the late Mr. John Walter had at that time a pique against the Rothschilds because they had never given him a hint of the character of Mr. Sampson—the charming simplicity of the man—the City editor who a short time before had been dismissed, and he stood by the delinquent for that time. But no proprietor or manager of the *Times* can long make himself a shield to any member of his staff against the pressure of the big finance houses, and it would probably be unwise of him to try. The *Times* to a great extent depends upon its early and exclusive information for the influence it possesses in banking and money jobbing circles. Cut this information off, or give it in a form that does not suit the master magicians of the money and stock markets, and it might just as well be a halfpenny newspaper, valued by nobody at more than its price. For all that the arrival of the penny, and still more of the halfpenny, newspaper has done much to undermine the *Times*, and it was no doubt the effective competition of these young and vigorous rivals that induced Mr. Arthur Walter and his manager—or assistant manager, for, under the old order, a Walter must always be a titular "manager" of the paper—to fall such an easy prey to the plausible, pushing Yankee. But long ago this danger was recognised, and the late John Cameron Macdonald, than whom, apart from wild politics, the *Times* never had a wiser or more loyal servant, made several efforts "to fortify," as he phrased it, the paper by erecting outworks. Under him—we cannot be sure at this date whether by his initiation—the weekly edition of the paper was started and still flourishes by its large circulation abroad, and he, after long debate, got permission to start about the first halfpenny morning daily in London, the ill-fated *Summary*, whose name and form doomed it. What a pity he did not call it the *Daily Mail* a name barred, however, by the *Mail*, a condensed evening edition of the *Times*, published three times a week, and the first of the "outworks," so to say, of the great newspaper itself. But it was not its name alone that killed the *Summary*, the contents of the paper did that. Instead of boldly starting an entirely independent paper, Mr. Macdonald was tightly bound down by his ideal, to the reproduction of part of the matter appearing simultaneously in the *Times*. The new paper was, in fact, the *Summary* and nothing more, and as such nobody had any use for it.

Attempts at founding a new halfpenny morning journal having ended disastrously, and "fortifications" being more and more urgently required if the *Times* was

to remain alive and a threepenny paper, the book-publishing enterprise was taken up and out of it grew the *Times* Book Club, with consequences so momentous that the newspaper is now about to pass into new hands and to bid adieu to its traditions. Many, however, of these traditions have already been abandoned, so that the sacrifice in this respect may not be much more than a matter of sentiment. To the Walter family, though, the wrench cannot fail to be great. Under the settlement made by the will of the first John Walter, the head of the family for the time being was always to occupy the position of printer, publisher, and manager of the *Times*, and only the profits of the newspaper itself were divisible among the increasing number of his descendants. So absolute was the power of the head of the house of Walter that he never had to give any account of his stewardship. He might stop the paper altogether, and not one of its proprietors could say him nay. The recipients of profits were mere beneficiaries under a will, not shareholders in any ordinary sense—at best were co-partners *en commandite*, but with unlimited liability for losses incurred on account of the *Times* and *Mail*. From this position it followed that the dominant Walter of the day might be making an excellent income out of his printing and paper contracts while the so-called shareholders got nothing at all, and obviously this is what has been happening. Imagine, therefore, what the surrender of these contracts must mean to Mr. Arthur Walter. Nominally he may remain at the head of the new company, but he will no longer be the printer and publisher of the various newspapers issued from the office of the *Times*. Through this change alone, however, the chance of a dividend for the new proprietors may emerge, for the methods of the *Times* printing office, in old days at least, were not those of economy from the point of view of the paper's group of proprietors. This, however, is a subject better left until we have the prospectus before us. But we may never see a prospectus, for there is considerable opposition to the suggested new arrangements, and although the objections put forward will seem antiquated in the light of present day experience, those who make them may be able to modify the plans so far as to provide for secrecy. A change to limited liability they can hardly prevent if it be true, as the *Daily Chronicle* states, that Mr. Walter has had to get capital from Lords Brassey, Iveagh, Rothschild, and Strathcona to help him to carry on the various enterprises now gathered beneath the name of the *Times*.

Had we seen the *Daily Chronicle* of the 9th inst. some questions put by us last week about the *Times* Book Club might have been framed differently, because the information about things bookish published in that newspaper possesses unusual authority, owing to the exceptional position its literary editor occupies with the publishers. According to his statement the book club is to be continued as part of the Printing House square enterprises, but the war it has waged so witlessly and tactlessly on the booksellers is to be stopped by taking the "nett book" pledge. Possibly this is the best conclusion possible in the circumstance, if the *Times* itself is to remain nominally a threepenny paper, if also it is to get back the publishers' advertisements, the loss of which, we are assured, cost it in gross revenue twice the amount confessed and mentioned by us last week. But if the club is to go on and give some help in earning dividends for the new company several other changes will be necessary, changes those who deal at the shop will be better able to indicate than we can. All we need say is that there seems to be no such classification of cheap books there as the public can depend upon in dealing with the great libraries of Mudie and W. H. Smith & Son. The *Times*, however, gives an amount of attention to foreign books—we do not mean "remainders" of Yankee novels—that might very well be imitated by some of its competitors. And we shall be glad to see publishers' advertisements once more occupying a prominent place in the "Literary Supplement," for that is by a long way the best thing of the kind in existence.

At present, however, all must be conjectural, for another reason. A strong minority of the co-proprietors of the *Times* are emphatically and increasingly opposed to the transfer of the property to Mr. Pearson as the representative of Sir Alexander Henderson and the leaders of the Protectionist faction, and also because they think he has already quite enough to look after in the *Standard* (morning and evening) and the *Daily Express*, not to speak of a multitude of other publications issued by the company bearing his name. There is no question at all of personal feeling or prejudice in reference to Mr. C. Arthur Pearson. On the plain, common-sense grounds that the *Times* ought not to become the "kept" mouthpiece of any group of political agitators, and that its traditions and standing even to-day are such as to require and deserve the undivided attention of whoever becomes its manager, an emphatic and strengthening opposition is being displayed towards the step contemplated by Mr. Arthur Walter. Whether the dissatisfied party of his voiceless co-proprietors is powerful enough to compel that gentleman to pay respect to its views so far as to abandon his project may be doubted, but that it may be strong enough to delay the transfer of the property until the terms of sale are modified appears probable enough. For there is this in favour of the dissentients, that a majority of the best friends of the paper outside is of like mind with them, and is giving free expression to the view that Pearson as the tariff tinkerers' factotum, and an already overworked newspaper manager, "will soon kill the *Times* altogether." And we should not be surprised if this view proved correct. All the more reason why events should not be hastened more than need of money dictates.

Economic and Financial Notes.

Labour and Prices in 1907.

A valuable review of labour conditions for last year has been issued by the Board of Trade in its *Labour Gazette*. It is not altogether a cheering review, but much more so than recent events might have led us to suppose. We fear, however, that industrial affairs will not be so prosperous this year as they were for most of 1907. Towards its close, indeed, there was less work to be had, especially in the metal, engineering, shipbuilding, furnishing and wood-working trades, and had it not been that work was unusually plentiful in the first half of the year 1907 would hardly have stood so near as it does to 1900. The mean percentage of unemployed members of trades unions, embracing over 600,000 individuals at the end of each month of last year, was 4.2 per cent. compared with 4.1 per cent. in 1900, 5.4 per cent. in 1905 and 6.5 per cent. in 1904. There is thus a slight turn for the worse in the average for the past year, and if prices begin to decline, as they must now do, in spite of all the efforts of corner manufacturers and forestallers, employment will also dwindle. Last year prices were exceptionally good, as the interesting table of index numbers, also published by the Board of Trade *Labour Gazette*, reveals. We have little faith in index numbers as a means of arriving at a just conception of prices and their relation to trade, but still over a series of years they do help us roughly to trace the ups and downs, and the index number covering wholesale prices of an unspecified number of commodities was higher last year than in any year since 1891. It was 105.8 as compared with 100 in 1900, and only 96.5 in 1902. In 1801 it was 107.4, and in 1884, to go no further back, 114.7. The price of coal was higher last year than in any year since 1901, and with the exception of that year and of 1900, 1872 and 1873, higher than at any time during the period 1871-1907. Copper and lead averages were also relatively 10 and 13.8 per cent. higher than in the previous year, but that shows what a misleading thing an index number is, because although copper touched £110 per ton in March, 1907, it fell to £62 per ton at the end of December. The prices of British and foreign wheat, again, have risen, and the averages were 8 and 9 per cent. above 1900, higher than in any

year since 1898, the year of the Leiter "corner." In spite of the slackening off in many industries wages have on the whole gone up, and the total effect of all the changes reported during December was a nett advance in the wages bill of about £26,000 per week. Nevertheless the number of the unemployed is on the increase.

A Trust Yielding over 4½ per Cent.

It has not been possible during recent months to continue the publication of suggested trusts, whether investment or speculative. Markets were betraying too many symptoms of disease, and it was impossible to guess how far the symptoms of hidden rottenness becoming visible might drive prices down. A pause has now come, and a recovery without a healing, which may last for some weeks or months. We, therefore, venture once again to offer suggestions to investors in the shape of groups of securities worth their judicious attention. The worst of it is, from our point of view, that correspondents always ask for stocks "likely to go up in price." If people would content themselves with mere safe investments there need never have been any interruption in our groups. As it is, the condition, demanded or implied, often imposes an insurmountable barrier.

"But now that the crisis is over and money growing cheaper everywhere there should be a chance." There should be, and probably there is—for a few months at least—so we shall now resume the occasional issue of suggested Trusts. In doing so, however, it is probably best to leave the most esteemed classes of stocks rather on one side, for the simple reason that they yield too low a return to be attractive to the investor who wants 4 to 5 per cent. or more for his money, with a dash of speculative chance thrown in. Those, moreover, who seek investments pure and simple, and who regard safety as the most imperative qualification, hardly need our help.

The following list may be described as speculative with substance in it, and it does not require much elucidation. The security for the Siamese loan lies more in the mediatised position of the country in relation to European Powers than in the strength of those amiable people themselves.

Agricultural Bank of Egypt debentures form one of the safest securities of the kind now to be had at a fairly moderate price.

Bahia Blanca and North-Western Railway 4 per cent. debenture stock must also be first class now that the company has been united with the Buenos Ayres and Pacific Company, and it forms one of the comparatively small group of good 4 per cent. stocks to be had under par.

A rather more speculative thing is the preference share of the Leopoldina Railway Company, not because the property is doing badly, but because Brazilian finance, as a whole, is not so healthy by a long way as we should like to see it. For all that this issue has the protection of over £5,500,000 of ordinary stock ranking below it which got 4 per cent. in 1906.

The New York Life Insurance Company.

When will American business men begin to understand that people in this country are sick of their bombast. Here is the general manager of the New York Life Insurance Company writing a letter to his deputy in London couched in the old style. In reading it one might forget there had been insurance scandals in New York, systematic robbery of policyholders, or, to put it mildly, a habitual display of the densest possible ignorance of the principles underlying soundly conducted life insurance. It is all fustian, brag, windy self-laudation. "I think you will agree with me after studying these figures that in view of the adverse conditions which prevailed in 1907 in the United States, both from an insurance and a financial standpoint, that the company's record has been remarkable." This note is repeated in almost every sentence throughout the letter. "The company's record of £27,000,000 of new insurances . . . is one that we should be very proud of," and he cites the fact that the company advanced upwards of £5,000,000 to policyholders on the security of its policies alone during the crisis as a quite commendable feat in booming finance; and he even has the assurance to brag that the company will pay out in bonuses to policyholders during 1908 £1,274,000, or "the largest sum in its history." The more shame to it. Finally, in ruffled turkey-cock style, a boast is made that no advantage has been taken of the authority granted by the Insurance Commissioners of various States to value assets as at December 31, 1906. This no doubt is to the credit of the New York Life Office management, and we may perhaps congratulate it upon the fact that in spite of a valuation as at December 31 last, the assets have risen by £4,083,000 as compared with December 31, 1906, and now amount to £101,600,000, a sum we trust prudently invested, not in inflated mortgages on real estate or in bonds of electricity companies or "Airline" railways, or sky-scrapers or steamship debentures or things of that description. It is a tough job in these days to place such a lump of money in ways that give cause to no anxiety.

But there is another side to this yarn with the big drum. An appendix is found attached to the letter giving some of the figures relating to the business done in 1907. These figures are likewise of the usual stunning or blinding description. A total premium income of £16,426,000 and a total income of £21,000,000; £9,870,000 paid to policyholders and total disbursements of £13,300,000, and so on and so on. Unfortunately this string of totals omits the most interesting item of all, the cost of conducting the business, but enough is revealed to enable anyone who cares to look beneath the surface to see that it must still be excessive; that, in the other words, this awfully great insurance company continues to live in the most handsome manner at the expense of those who take out its policies. We may support this view by various illustrative calculations. Policyholders, for example, got last year 47 per cent. of the entire income of the company, that company be it noted which is ever boasting of its stupendous wealth, a wealth that, if real, might have permitted it to give with safety at least another 10 per cent. of the entire income to those out of whom its money has been made. But under the patent Yankee system policyholders will probably get less than 50 per cent. of their payments of accumulated riches to the end of time. Including the dividends to be declared on policies for the current year and also the exhibited amount actually paid to policyholders last year as well as the difference between the value of the investments at the end of 1906 and at the end of last year, £15,227,000 of the total income of £21,000,000 is accounted for. This leaves £5,773,000 which has disappeared out of that income in unacknowledged directions. If the whole of this has gone in expenses, then the ratio of these to the premium income would be upwards of 35 per cent. The probability, however, is that something may have been taken out of this handsome balance by way of depreciation allowance on the company's investments. Let us therefore knock off the odd £1,773,000 on this score. That would leave £4,000,000 for working expenses or about 24.34 per cent. of the premium income. We shall be surprised if the actual figures are not higher than this, but upon a charitable assumption of this kind the New York Life Company is still signalised as one of the most expensive offices in the world professing to conduct life insurance business on a

philanthropic basis or otherwise, an office therefore that no sensible person in this country should have anything whatever to do with. Have its conductors got back any of the £5,000,000 odd they lent to policy-holders during the panic?

FREDERICK SAGE AND CO. (1905), LIMITED.

A moderately phrased but frank report has been issued on the business of Frederick Sage and Co. by the two new directors, Messrs. C. Birch Crisp and Frank Debenham. After reviewing briefly the origin and history of the company, these gentlemen reveal the fact that some of the extensions of the old firm were made just before it was turned into a limited company, and before their success or failure could be known. There was a South African branch, whose manager suddenly left the company and apparently took his business with him. It has been a dead loss ever since. The old firm also opened branches in Berlin and Manchester which have done little or no good. In fact, the prospectus issued less than three years ago sinned by its omissions not by what was said, and for the loss produced by the silence the shareholders have, we fear, no legal remedy. Therefore Messrs. Crisp and Debenham advocate the abandonment of foreign and provincial branches, the concentration of the business in London, where there is ample scope and where it continues to be profitable, and a change of the board as preliminary to the institution of many economies. At present, they say, the assets are being gradually dissipated, and this process must be arrested before any sort of mortgage debt can be thought of. The present board appears to be bent upon creating a prior charge of some kind, always the resource of the weak, and this Messrs. Crisp and Debenham quite rightly resist. You cannot put a mortgage upon a wasting property without committing a grievous wrong against those who lend the money. Therefore we hope shareholders will back up Messrs. Crisp and Debenham, not only in preventing a debenture issue, but in reconstituting the board, so that the whole policy of the company should be overhauled and its good business conserved and extended. If this is not done the end will probably be liquidation.

We say this in full view of the directors' statement. The report for the year ended September 30 last, just issued by them, admits the truth of much of what Messrs. Crisp and Debenham assert. It tells us that the year's trade gave a gross profit of £24,417, but this entirely vanishes and gives place to a deficiency of £1,269 after the current charges have been met, and yet the directors coolly recommend "that steps should be taken to provide £40,000 in such a manner as may be authorised under the memorandum and articles of association," so that this unprofitable business may go on. They also allege that "vigorous measures" have been adopted to lessen the cost of manufacture, but there is no trace of these measures in the accounts. Did the directors begin with themselves? They altogether received £4,277 in the business year, including £570 in ordinary fees, not an excessive amount, and £3,707 in what is called "directors' management salaries." Very pretty management it has been, and as dear as pretty. The balance-sheet is also a windy one, as it could not fail to be when the company was floated on such a reticent prospectus. Its total is £323,388, and of that £104,886 is represented by goodwill, £10,327 by preliminary expenses outstanding and £7,450 by cash disbursements on account of the action against the Mazawattee Tea Company. Here, therefore, we have nearly £123,000 out of the total £323,000 which cannot be said to represent any genuine asset whatever. And the writings down are ridiculous in their minuteness. Leaseholds, machinery, plant, &c., &c., in London and Berlin stand at £29,000, after a nett sum of £1,147 was allowed for depreciation. Upon machinery, plant, fittings, &c., at Cape Town, £3,150, the nett depreciation is only £101, although the South African business has been a sucker from the start. Then stock-in-trade, £72,296, and the nett unpaid for value of work in progress, £20,920, or £93,222 in all, seem to constitute a very [illegible] accumulation, especially when we add in £[illegible] due by sundry debtors after deducting £4,150 for [illegible] debts and allowances. What is the real value of these assets aggregating over £140,000? Is it half, two-thirds, three-fourths, the amount set down, or what? There is, however, £7,320 cash in hand, and the company possesses an investment valued at £100. On the other hand, it owes sundry creditors £43,793, and probably the demands of these creditors and the impossibility of realising enough of the assets to satisfy them is at the bottom of the cry for more capital. Shareholders ought to turn a deaf ear to that cry until the management is changed and the business re-organised.

MR. ROBINSON AND RANDFONTEIN.

The indignation of the Kaffir Circus and the whole crowd of mining magnates, "shops," finance houses and everyone else even remotely connected with the South African market when Mr. Robinson launched his latest circular on Saturday was one of the most amusing episodes we have encountered for many a day. Prices had been having a glorious time, and the last day of the week would probably have eclipsed everything that had gone before except for this ill-timed appeal for a million of additional capital. It had the effect, so we were assured, of completely upsetting the market, and it was quite three days before dealers could recover their equanimity and set quotations on the upward tack once more. We do not suppose that the request for funds was entirely without influence, but the part it played in last Saturday's slump was probably very small. The market simply boiled over, and we know for a fact that before Mr. Robinson's circular saw the light the shops were pouring out shares in a manner that would have sent prices tumbling down without any special assistance. But the truth is Mr. Robinson is not exactly loved by his fellow magnates of the Rand. He has proved a sharp thorn in their side on more than one occasion, and they have never forgiven him for breaking away from the Native Labour Association, and immediately getting all the indigenous labour required and a good deal more. Since this exposure of the tactics of the association Mr. Robinson has been, as it were, a marked man, hence the simulated frenzy of the market when advantage was taken of the opportunity provided by others for carrying out a proposal foreshadowed as far back as May last. It need not be supposed that we are lost in admiration of all Mr. Robinson's methods, and we do not know that the present scheme entirely commends itself to our view of things. The plan seems to be a little hard on existing Randfontein shareholders who have waited so long for a return on their holdings, and may now see the fruits of their patience wrested from their grasp.

At this point it may be recalled that not quite a year ago an agitation sprung up among a small dissatisfied section of the Randfontein shareholders, who wanted the directors to jeopardise the future by paying a cash dividend and to do sundry other foolish things. The board's rejoinder to the various suggestions and allegations put forward was so much to the point that the "reform" movement promptly collapsed and has not been heard of since, unless any of its members have helped to beat up the latest exhibition of fury. One or two points in the statement of the directors issued at that time may be usefully recalled. It was dated May 7, 1907, and told how every effort was being made to bring eight subsidiary companies in addition to the four then working to a producing stage. Reference was made to the company's favourable position in the matter of native labour, and advantage was being taken of this satisfactory state of affairs to push forward in the most energetic manner the development of the subsidiaries and their equipment. "To achieve this [illegible] money is required," pursued the circular, the distribution of a cash dividend being out of the question, and it was predicted that if nothing unforeseen occurred the

Randfontein companies would be producing in 18 months or two years about 75,000 ozs. of gold per month. Whether this anticipation will be realised seems somewhat doubtful, and a million pounds seems a lot to ask for, but it must be remembered that the undertaking is a vast one. At present there are four companies working and producing gold, and no less than eight others are being opened up, three of which have been amalgamated under the title of the Randfontein Central Gold Mining—without giving the independent shareholders a chance of expressing an opinion, so it is said. A considerable amount of work has already been done on the properties, and the directors say it is absolutely necessary that further funds should be provided if they are to be developed to the best advantage and brought to the producing stage without delay. It is conjectured that the million sought will be sufficient to complete the development and equipment of a certain number of the mines and bring them to a producing stage within two years. Six out of the eight companies—names not mentioned—have been divided into two blocks, and it is proposed to erect a 300-stamp battery with tube mills on each of these blocks. The engineers estimate that each battery will crush 63,000 tons per month, and look for a profit of about 10s. per ton. The remaining two companies are also being developed, and machinery to equip and work the mines will be erected. It is proposed to raise the £1,000,000 required and sought in the shape of participating certificates. These will bear fixed interest at the rate of 6 per cent. per annum, and after the payment in each year of a 9 per cent. dividend on Randfontein shares will be entitled to 25 per cent. of any further profits distributed. The certificates are repayable at par on January 1, 1923, but can be redeemed on or after September 1, 1912 at the company's option on three months' notice given. Taking all things into consideration the certificates look a fair speculation of their class, as the parent holds no less than 3,472,230 shares in the 12 companies, and when all are working the profits are put at £750,000 to £1,000,000 per annum. The circular setting forth the scheme concludes with an intimation that the consequences must be serious if the money is not forthcoming, and Mr. Robinson's enemies construed this into another "threat." It may be, we are not his defender, and should like to know how much money has already been spent on the properties. The subjoined letter, signed by "Shareholder," and addressed to the City Editor of the *Morning Post*, brings to light one or two remarkable points on which light is imperatively needed :—

As the majority of the shareholders in the above company have no chance of being present at the meetings, I shall be glad if you can throw any light on the following points. At the last annual meeting, held at Johannesburg on February, 1907, the chairman states in the last paragraph on page 5 of the report: "The revenue for the year amounts to £142,850 10s. 9d., and the expenditure to £20,245 15s. 10d., leaving a balance of £122,604 14s. 11d. to be added to profit and loss account, which now stands at £3,573,614 1s. 1d. The actual cash on hand at December 31 was £658,138 14s. 8d. . . . It will thus be seen that the financial position of the company is thoroughly sound, and that no difficulty will be experienced in meeting the large expenditure required for assisting in the development and equipment of our eight non-producing subsidiaries." Now we are bluntly told that we have to find another million sterling or it will be the worse for us. Again, on page 10 of the same report the chairman puts the holding in the subsidiary companies at £4,365,093 shares, but, according to the notice which we have all just received, their total holding now consists of only £3,472,230. What has become of the other £900,000 in the meantime?

The Latest Diamond Sensation.

We hasten to say that this heading has no reference to the remarkable case now engaging the attention of the Paris Courts, in which Sir Julius Wernher accuses M. Lemoine of bamboozling him over an alleged diamond-making formula. The comedy aspect of this affair appeals to us strongly, but space is too valuable to permit its discussion, and the sensation to which we refer is the postponement of the dividend declared by the Premier Diamond Company last month. Few companies, even South African ones, have had more mystifying and extraordinary incidents packed into a comparatively brief career than this Premier Diamond Company, and the latest seems to eclipse everything that has gone before. We do not propose to enter into a recital of these events, which would easily fill a good-sized volume, and need not go further back than the announcement made at the end of last October that the De Beers and the Premier Company had come to an arrangement for regulating sales. The news came to hand in the following form :—"Premier (Transvaal) Diamond Mining Co., Limited, has finally arranged for sale of its output to the Diamond Syndicate on terms similar to those of the De Beers Consolidated Mines, Limited, and the same syndicate for the disposal of the latter company's production." We give this in full because it has an important bearing on the lengthy statement just issued by the company in justification of its policy of postponing the payment of the 10s. dividend announced last December. Although not so declared by the company, it was understood that this arrangement with the Diamond Syndicate would run for about three and a-half years. The syndicate was supposed to have taken the entire production of the Premier for the second half of last year, while from January 1, 1908, the outputs of the two companies would be limited to certain proportions, and pooled. At this point we may usefully introduce the cablegram received on Wednesday last from the head office of the Premier Company in Johannesburg, no part of which can well be spared.

Shareholders are aware that, owing to financial disturbance in America and consequent stringency of money in Europe, the diamond markets of the world are almost completely dislocated, and the depression which commenced some months ago has assumed such serious proportions that the directors have come to the conclusion that in order to protect and strengthen the position of the Premier Mine it is imperatively necessary to conserve and augment the resources requisite to meeting any possible difficulty resulting in future. With this end in view, the board, after consultation with the Transvaal Government, who holds a large interest in the industry, have decided to postpone the payment of the dividend on the deferred shares, announced in December, amounting to £160,000. The Government on their part have agreed to allow the company to retain from their share of the profits reflected in the accounts at the end of the company's last financial year the sum of £240,000.

It must be obvious to the shareholders that the directors have only adopted the policy of delaying payment of the dividend in consequence of the gravity of the situation in the diamond trade, and the board feels assured that shareholders, on consideration, will accord this policy their entire support. By the arrangement referred to the sum of £400,000 is added to the available cash and other resources of the company, and the company placed in a position not only effectively to carry out its own operations, but also to avoid forcing diamonds on an unwilling market. The board hopes and believes that the depression in the trade will give way to a more normal state of affairs in the near future, and thus enable the Diamond Syndicate, who contracted to purchase the company's production until March, to continue relations with the company. The Syndicate practically controlling the sale of the entire output of rough diamonds has created in the past complete confidence between the consumer and producer, and it is anticipated that by careful regulation of sales by the mines and other assistance to the Syndicate these relations will be maintained and improved.

The policy of the board is rendered possible by the co-operation of the Government, and will give the Syndicate the assistance so necessary at the present time to restore the diamond market to its former stability. In round figures, the last October balances are nett profit £865,000, less unsold stock £164,000, leaves £701,000, applied equipment £192,000, divisible nett cash profit £509,000, company's share £204,000, add company's share Cullinan sundry revenue £89,000, deduct preference dividends £100,000, leaving divisible for company £193,000 to the end of October, which more than covered the dividend declared in December. The payment of the dividend is only delayed for the present in the interests of shareholders, and will be made so soon as the directors are satisfied the condition of the diamond trade warrants.

After the course adopted by De Beers, the step thus announced does not really cause surprise, and we suppose the company's directors are powerless, more or less, in the matter, being subject to the dictation of the Diamond Buying Syndicate people, whose position we should judge to be well nigh desperate. They can neither sell the stones they have nor buy more, and we get the ludicrous position created that the producing companies are evidently called upon to finance the sales made to the Syndicate. No other interpretation can be placed upon the Premier Company's pronouncement,

and the closest attention should be bestowed upon the short sentence in the above which is apparently the crux of the whole business: "The board hopes and believes that the depression in the trade will give way to a more normal state of affairs in the near future, and thus enable the Diamond Syndicate, who contracted to purchase the company's productions until March, to continue relations with the company." This is a most mysterious statement, and must be perfectly bewildering to the shareholders, labouring under the delusion that the sale of the stones to the Syndicate was assured for some years. But under the agreement the Syndicate seems to do pretty much as it likes, taking the stones or not, according to which suits its policy best, and we hope to throw some light on its operations one of these days.

American Business Notes.

At one bound the New York National banks have brought their position as a group back to an appearance of solvency. Their specie average for the past week showed an increase of £2,922,400 in the stock of metal held, and at the same time the greenbacks on hand had increased by £755,600. There was thus a positive increase in the reserve of £3,678,000, part of which arose from loans being paid off to the amount of £3,144,400, the balance coming from an increase of £637,000 in the nett deposits. Money had thus come in from hoarders, and through re-deposit of balances withdrawn either by private customers or by the Western banks. The result, therefore, is that instead of a deficiency of £2,301,500, as was shown a week before, the reserve last Saturday exhibited a surplus of £1,217,000, which compares with a surplus of £1,728,200 at the corresponding date a year back. The period during which these banks as a group were legally insolvent has therefore ended after a duration of ten weeks. This is a fortnight longer than the temporary insolvency of 1893, and, according to the *Morning Post*, as long as that of 1873. The banks in Chicago and Atlanta have now paid off all their clearing house certificates, which is real progress.

What are we to infer from this happy change? It is a natural consequence of diminished business throughout the country, and of the redundancy of currency produced by the operation of the National Bank laws. Less money is required to conduct the current business, and there is more money of a sort by a good deal than the country wants. It follows, therefore, that should Congress pass the Aldrich Bill, or anything like it, there will soon be still greater masses of rag-and-bond money for which the people have no use, and the effect of its manufacture will be to force the specie out of the country. Last week's New York bank averages show gold to be coming back to the heart of the banking system, and if there should be no use for that gold it will probably be re-shipped back to Europe at no distant date. We might say it would certainly be shipped but for the eager struggle that has at once begun to obtain more money in Europe with which to carry on the game as if nothing had happened. In the end of last week Messrs. J. P. Morgan and Co. bought £6,000,000 of New York Central equipment bonds, which they intended, the telegrams said, to dispose of in London and Paris, and in the beginning of the present week cableists assured us that £5,600,000 of this issue had already been sold, and by the end of this week that the whole had gone. The bonds bear 5 per cent. interest. What they are issued at has not been publicly disclosed, but the various series are offered here from New York at these prices:—Notes due 1909 at 99⅜, notes due 1910 at 98⅛, and notes due 1911 at 97½. These are the Wall Street prices. The six million issue is the forerunner of many similar ones, and if Europe absorbs all that is offered to it, the gold now beginning to accumulate in New York may not come back here for some time to come, but be utilised to sustain a renewal of market activities on the other side of the Atlantic, unless wanted to pay for Argentine grain.

While some officials of New York State have been giving it as their opinion that there are a great many financial magnates on Wall Street, and in other American markets, whose proper place would be a convict prison, the New York *Commercial Chronicle* continues to uphold the market men, and to denounce politicians and their officials for interfering with the ways of a boss-established providence. We shall not decide which view is the right one, but wait for the light to be furnished by facts bound to come to hand during the current year, no matter what cunning financial devices may be resorted to. Everything, however, is cheerful in the publications of the market Press. It assures us, for example, that the great retail stores whose difficulties were expected to come to the surface at the new year, are now comfortably tided over, and that they will be able to go on as if nothing had happened. There is, indeed, but one source of anxiety to this class of commentator, viz., the growth of railroad working expenses. These go up still, and not only wipe out any gains still shown in the gross earnings, but emphasise the decreases in these when they occur. We, on the other hand, doubt both gross and nett figures, and believe that were a genuine investigation made into the items of income and outgo, they would often be found to be concoctions more or less deliberately made to mislead. Why should the expenses of the Atchison, Topeka, and Santa-Fé Railroad have increased by nearly $1,250,000 during November, and why should almost every railway continue to exhibit such good gross traffic receipts when the trade of the country was probably by November cut down by at least 40 per cent.? It is true that the exports are kept up in an encouraging way so far as values go, but the internal trade of the country must have suffered from the middle of October onwards, and must be suffering now to an extent which could not fail to tell upon railroad earnings as well as upon the earnings and profits of producers and distributors all over the country. It is the diminution in business quite as much as the fears of the public that have caused money to accumulate. The estimate is that £55,200,000 of currency was hoarded during the acute period of the crisis, and that of this £20,600,000 represented the amount of currency held by interior banks in excess of the 15 per cent. of their deposits legally demanded of them. But at the very time when the banks were thus hoarding up currency and preventing its circulation, driving it to a premium, in fact, they had also suspended payment to an extent which half-paralysed the whole interior trade of the republic, and that could not take place without inconvenient consequences to the railways.

Items of interest are not very numerous this week, but some of them at least point to many difficulties to be overcome before the machinery of commerce and still more the magic of finance is again working smoothly. Money, money is the cry in all directions. The Chicago and Milwaukee Electric Railroad, which was for a moment put in the hands of a receiver, and then taken out again, is short of money, and was able to resume an appearance of solvency merely because help came from outsiders. The claim of £10,000 on a note tendered by one of the company's creditors could not be paid without help; therefore money had to be provided, and representatives of the Canadian bondholders have engaged to advance £50,000, with which the interest on the bonds due on the 1st inst. was met. These Canadian bondholders have further pledged themselves to raise £100,000 to be used towards the completion of the railway from Racine to Milwaukee. Money is also wanted by the Seaboard Air Line, in spite of its alleged gross earnings of approximately £3,800,000 in the year 1907. Its receivers have been authorised to borrow about £133,000, and at the time when payment stopped it owed £200,000 on past due vouchers, besides a floating debt of £600,000, which it

was being pressed to meet and could not. Money is also to be raised, if possible, for the Westinghouse Electric and Manufacturing Company, and for some of its allies, mention having been made of a bond issue for the parent Westinghouse Company to the amount of £9,000,000, a quite excessive total, but its subsidiary, the Westinghouse Machine Company, proposes to issue under the reorganisation plan £1,440,000 in three-year 6 per cent. notes, in order to pay off existing creditors. These notes are to be secured by a deposit of the company's bonds, taken at 85 per cent. of their face value. The Southern Steel Company cannot pay the interest due November 1 on £600,000 of its first mortgage bonds, and the Consolidated Steamship Line is another concern in a like plight. The Atha Steel Casting Company, apparently a dependent of the Westinghouse Electric and Manufacturing Company, one of the chain of more or less insolvent concerns working under its control, also requires further help. Down in the cotton country the Western Bank and Trust Company of Dallas, Texas, has pulled up with liabilities estimated at £211,000 and a share capital of £100,000.

Nothing seems to have come of the invitation given by the New York Clearing House Banks to the trust companies to join in fellowship with them. They intimated their readiness to admit the trusts to full membership of the Clearing House if they would fulfil the essential condition, which was that they should maintain a 25 per cent. cash reserve. To make an offer of that kind was to mock at the finance trusts. How could they possibly put aside 25 per cent. of their liability to depositors, and at the same time keep the Wall Street mill supplied with credit grist? Even if the Federal Government floods the Republic with paper money, this condition would be beyond them. No wonder, therefore, that they have made no response to the invitation.

It is pompously announced from New York that Mr. Daniel J. Sully, one of the numberless "kings" of a sort whom republican America seems to delight to honour, has entered the cotton market "with a strong financial backing," in order to establish a corner there for May delivery. Even if he fails in this undertaking, he will at least "endeavour to force the price up some 15 cents." Is it the Southern farmers and their "holding" organisations who are behind this move? Quite likely, and their champion is just the man for them. His disastrous failure in March, 1904, following his then efforts to corner the cotton market, must have rather exalted the man in the eyes of cotton hoarders in the South and everywhere over the Union, he played with such demoniacal abandon; but that such a plan should be openly announced and boasted of is surely a most significant illustration of the degraded condition of business morality in the United States. It is no matter to irresponsible adventurers of this type, mere marauders, if millions of workers are punished and made to suffer. To them the disorganisation of a great industry is a matter of no weight at all. They play to steal the wealth of cotton spinners and weavers, of merchants and consumers, and care for nothing except the dollar. From this point of view a man like Daniel Sully is a public nuisance, the perpetrator of a disgusting crime. But already the gamesters have got cotton up to 12.10 cents per lb. for cash and 11.63 cents for May delivery, and Thursday's market was very wild. Meanwhile the cotton crop of the past year is now estimated at from 12,000,000 to 12,500,000 bales, and Lancashire will be able to take care of itself.

Some amusement may be extracted from the various rumours set afloat with regard to Mr. Cortelyou, the present Secretary of the Treasury. Day by day we are told that he has quarrelled with President Roosevelt, and resigned his post in order to become a rival candidate for the Presidency. This rumour is always "officially" denied, and seems too grotesque to have any solid foundation. Mr. Cortelyou, though, is now a *persona grata* on Wall Street, to which he obsequiously supplied Government money to a dangerous extent in order that the potentates of paper finance might crawl through the crisis, and they are anxious to do him a good turn. If Mr. J. P. Morgan, who visited the Treasurer in his office the other day, failed to persuade him to throw off official responsibility and become a Presidential candidate as his servant, he may have induced him to resign in order to take the headship of the bankrupt Knickerbocker Trust in whose fortunes Mr. Morgan's interest is profound. That is the latest rumour, and the position, we imagine, would just about suit a gentleman of Mr. Cortelyou's intellectual capacity and business talents.

Exports are not flowing out of the United States in quite the volume we should expect, allowance made for the manipulation of prices. Still there is an increase, and it would have been greater but for the restraining influences of Government money supplied to prevent holders of produce from being compelled to sell. In the month of December the increase in the exports of breadstuffs, cotton and mineral oils was about £3,400,000, but this was offset by a decline of about £500,000 in the exports of cattle and provisions. Still the nett increase in exports was over £2,900,000 for the month, and if concurrently imports are cut down there might be a gradual return to something like health in the economic condition of the country.

While superficially on Wall Street the surface aspect of the market—cheaper money, less jealous scrutiny of "collaterals," renewed gambling on a large scale by professionals—indicates that acute crisis is over, its effects continue to be visible in the failure of this or the other industrial corporation to pay a dividend, "regular" or other. In addition to the lapses mentioned above, the United States Cast Iron Pipe Company has deferred its regular 1 per cent. per quarter, and the Osceola Consolidated Mining Company now gives nothing compared with $7 per share on the previous occasion, but the H.B. Claflin Company, one of the big stores in New York, has issued a statement showing an increase of nearly £20,000 in its profits for the second half of the year, which is not bad on a total of £101,000. Failures multiply none the less, and according to Dun's Mercantile Agency they are put at 502 last week against 386 in the previous week and 311 at the same date a year back. Canadian failures also amounted to 42 against 30 the previous week and 20 last year. Two other New York Stock Exchange houses have stopped payment, Messrs. Macleay and Co., with liabilities estimated at £300,000—it seems to have involved itself in Heinze-Morse finance—and a small firm called Whitney and Kitchen, which made an assignment on Thursday.

The Bank clearings of the week ended January 11 are not so unfavourable as some of the recent returns have been, still the New York overturn shows a decrease of 31.1 per cent., and the clearances for the country outside New York a decrease of 24.8 per cent. on the corresponding week last year.

Rockefeller and Co.'s Amalgamated Copper wealth scalping machine has reduced its quarterly dividend to ½ per cent. against 1 per cent. declared last October and 2 per cent. last July. The Montana Copper Company, too, has declared a $2 dividend against $5 the previous quarter and $11 last July. Probably the small dividends now declared have not been earned, for official statistics of copper production and consumption in the States last year indicate that the stock of the metal on hand has risen from 5,800,000 lbs. at the end of 1906 to 101,300,000 lbs. on the 1st inst., and the figures take no account of scrap copper.

Passing Events.

In dealing with the commercial treaty which the Dominion has concluded with France, Mr. Fielding, the Finance Minister, remarked that the greatest overseas market Canada had was Great Britain, and complacently went on to boast of the increase in the total trade between Canada and the Motherland, which had

risen from £19,800,000 in 1897 to nearly £42,000,000 in the past year, and he ascribed this increase to the beneficent results of the preferential tariff. This is disputable, and he omitted altogether the effects upon Canadian enterprise produced by supplies of British capital procured under all forms and numberless pretexts. How much British capital has gone to Canada in the pocket of emigrants through the solicitations of joint-stock companies, railroad and other, and through municipal, provincial, and central government borrowings between 1898 and the present time? If Mr. Fielding would do that sum in addition for us, we should know better where we are with Canada. But he was inconsistent even in his exultation over "preference," for he said that Canadian exporters desired to extend their trade over the wide world, and for this reason the Government has concluded a treaty with France, so that a stimulus might be given to business in that direction. Why, then, put up a preference barrier to prevent this wished-for expansion?

Better news comes from India this week, good general rain having fallen between the 10th and 12th inst. throughout the whole of Northern India to Peshawar, to Bombay, Nagpur, and Calcutta, and the Governor-General in his message hopes the rain will extend into North-East India. We trust it may, for the increase in distress was rapid last week, no less than 84,000, the total having risen to 223,782 as against 140,000 in the previous week. In the United Provinces the numbers on relief works have risen to 100,000, and of absolute paupers to nearly 69,000. In Central India, too, 46,843 were on the relief works at the end of the week, and 3,045 in receipt of gratuitous aid. Famine is also sufficiently in evidence in Orissa to impel the Government to institute test works, at which, however, the attendance is small, and there was a slight decrease in the number of persons, chiefly women and children, in receipt of gratuitous relief. No relief works have yet been opened in the Central Province, but some 750 paupers are being relieved there.

Are we going to have a revival of the bimetallic agitation? It is highly probable. Just as agricultural distress, over-taxation, the extravagance of the spending classes of the community, and the dishonest capitalisation of many businesses have given an impetus to the old Protectionist heresy, so the partial collapse of the giddy fabric of wealth-devouring finance is impelling the handlers of credit to cast about for something better than mere issues of more or less forced paper currency with which to prop the fabric. The cry has even risen once more in this country, "Rehabilitate silver," and if it has not yet been started with any force in the United States, it is probably because the politicians there have not yet had time to get their wits together, and are still prepossessed by the idea that there is nothing in the world like paper money—pure rag-on-bond currency. In Germany, however, the Imperial Minister of the Interior has intimated that as a result of an investigation into the state of the currency a revision of the coinage law will be effected, with a view to increase the amount of silver in circulation in accordance with the growth of population. The gold standard is still to be maintained, but silver is to be the working currency as much as possible in the Indian manner.

Not much help will be given to traders with South Africa by the report of the sub-commission on the South African shipping ring. This may not be the fault of the sub-commissioners, for the scope of their inquiry was quite limited, and both Sir A. E. Bateman and Sir John Macdonell are men of ability and character, quite capable of giving judgment were they allowed. As far as their report goes, it indicates both good and evil in the conference or "ring" system, and also shows that the complaints made against it are to a large extent based upon what may be called shifting ground. What is the use, for instance, of making a comparison between the conference rates and those existing between the United States and South Africa? There is no return trade at all, as the sub-commissioners point out, from Africa to the States, and if the Morgan shipping combine or other wandering ocean tramps intent on mischief choose to carry goods from the United States to South Africa at a dead loss, that surely is no reason why British shipowners who do a regular coming and going trade between the two countries should imitate them. It is equally fallacious to compare conference rates with the rates charged by Messrs. Houston and Co. during the "fight." These fights always end in bringing the aggressor inside the ring. At the same time, there is much force in the observation that unless somehow controlled, the shipping interests embraced in the privileged group have it in their power to make or mar any lines of railway in the South African colonies. Undoubtedly there is a grievance in the existence of the ring, but we are not sure that the trader suffers most.

Mr. Asquith's praiseworthy effort to synchronise the payment of direct taxes throughout the United Kingdom by bringing England up to the Scotch standard, does not seem to be meeting with that success it deserves. At any rate, the income-tax is lagging behind the figure of last year, and up to Saturday last the entire revenue is £1,235,000 behind that of a year ago to the same date. Last week's income, in fact, was £1,271,000 less than that of the corresponding period a year ago, but the expenditure was fully £1,000,000 below that of the previous week, excluding £650,000 advanced, £500,000 of it for telegraphs and £150,000 for military works, and £1,500,000 was disbursed to repay deficiency and ways and means advances, but this money did not benefit the open market. Furthermore, the Bank balances of the Treasury were increased by £270,440, and at this rate credit jobbers in the City will soon be hard up. The income-tax, in spite of the whip up, yielded £343,000 less than in the corresponding week last year, but perhaps this decline is wholly attributable to the ninepenny rate on earned incomes. Why with all this wealth is the floating debt in the form of Treasury balances now up to £15,713,000? That does not indicate thrifty management of the nation's purse. Is Mr. Asquith propping up the Consol market, French fashion, instead of devoting his sinking fund money to redeem floating debt?

Whatever the Prussian Government may have expected, whether £15,000,000 or £20,000,000, it has had to be content with a subscription of £9,050,000 to its new loan. The whole of this has been allotted in full, and probably twice as much would have been thus assigned if the Government of the kingdom had got the chance. It professes itself satisfied, especially because the allottees are investors who will keep the stock they have bought. They could not be anything else for this year, under the terms of subscription which forbids them to sell, and we have our doubts about their *bonâ fide* character, for the German people have very few millions at present to chuck into the Treasury of the Prussian kingdom or anywhere else. Altogether the augury is not a particularly happy one for the coming Imperial loan, and we are not surprised that the Berlin Bourse views the information with very mixed feelings.

An old customer of Lloyds Bank is complaining in the *Times* that the secrecy supposed to be maintained by bankers with regard to the position of their customers is "all a pompous farce." It appears that the Lombard Street manager of Lloyds Bank and the managing director of Martin's Bank both admitted recently while giving evidence in a bankruptcy case that the affairs of customers were discussed with representatives of the recognised trade protective societies. That is so and is no new thing, and we really cannot see that such discussion implies a violation of the understanding between banks and their customers. How are bankers to know what is going on unless they have some recognised, authoritative, and at the same time secret channel through which they can obtain information? Since the passing of the Chamberlain Bankruptcy Act aid of this kind has been more imperative

tively necessary for the protection of the banker than it was under earlier Bankruptcy Acts, for were it not through help of this kind many a customer might enter into a composition with his creditors and his banker know nothing about it.

Some weeks ago it was stated in our "American Business Notes" that the financial outlook in Canada was the reverse of cheerful, and as one proof in support we mentioned on unimpeachable authority that the sales of land by the Hudson's Bay Company had absolutely ceased, of course for the time being. Last week's summary of these sales for the final quarter of the year quite bore out this statement; it could not be controverted. The paragraph, however, has excited the boundless wrath of a Winnipeg newspaper, which has delivered itself in this style:—

A LUDICROUS LIBEL.

A correspondent has drawn the attention of the *Telegram* to an article in The Investors' Review, of London, which contains more falsehood and misrepresentation than has ever been written or published about Canada before. This remarkable outburst begins by bemoaning the financial conditions in Canada. We can do all the regretting that is necessary over that ourselves. It is the case, however, that, instead of bolstering up speculation, our banks began to take in sail nine months ago. When the tornado burst in the United States they were ready for it, and Canadian finance came through the whole trouble triumphantly.

The writer in The Investors' Review takes a fling at land values. Presumably it never occurred to this sapient scribe that the value of land depends upon what it will produce, and not upon the amount of money that can, or cannot, be secured for it at any particular moment. The money value of Western Canadian land has always been below its productive value, simply because there is so much of it that it cannot all be absorbed and settled at once. The Hudson's Bay Company does not sell too rapidly, not because it cannot sell, but because it knows that gradual alienation means better prices. A financial stringency, the existence of which nobody denies, must certainly diminish trading in land.

Trading in land does not enrich a country, but the breaking and cultivation of the soil. The inevitable result of decreased speculation is increased production. "As it is, with a grain crop worth $120,000,000, and with a few cattle and sheep left, not to mention moose, caribou, deer, game birds of all kinds, jack rabbits, white fish, trout, and the myriad fish products of the ocean, Western Canada will be able to live and prosper without largess from London money-lenders."

Having explained that Canadian land is of no value, The Investors' Review goes on to decry municipal credit, with particular emphasis upon the sad condition of Winnipeg and Vancouver. Here it descends from misrepresentation to pure, unadulterated lying. The people of Great Britain subscribed twice over to the Vancouver bonds at 91, and the people of Vancouver are extremely angry at the foolishness which allowed the London money sharks to make the difference between 85 and 91. The Investors' Review represents these money sharks. Winnipeg has not made the same mistake, and will not fund its floating debt until the market becomes more normal.

What Winnipeg is in the eyes of The Investors' Review would be hard to define. The people of Winnipeg regard their city as the inevitable centre of the greatest productive area on the globe. The Investors' Review seems to think it is an aggregation of brick, stone, and mortar built up through the foolish forbearance of the British investor. That paper should get a pair of spectacles to cure the mixture of myopia and astigmatism from which it suffers.

There is a lack of finish about this performance. It is mere vituperative "high falutin." More to the purpose would it have been to tell the creditors of the Canadian North-West on this side how the farmers there are going to meet their mortgage and other obligations out of the proceeds of immature crops or standing crops buried beneath the early snow, or what the quality and quantity of the crop as reaped actually is; or what proportion of the ruined farmers are forsaking the land to crawl westward into the more genial British Columbia. But we are happily able to assent to the dictum that "the value of land depends upon what it will produce."

Critical Index to New Investments.

Great Western and Great Central 3½ per Cent. Guaranteed Stock.

By the Great Western and Great Central Railway Companies Act, 1899, and the Great Central Railway Act, 1907, the joint railways of these two companies, consisting of a line between Northolt and Princes Risborough connecting the two systems, and another between Princes Risborough and Aylesbury were transferred to and vested in a Joint Committee. This Committee was authorised to refund to the two companies their capital outlay on the joint undertaking, and with that object was directed to lease the property to them for a yearly rent of £87,500. It was further instructed to create a 3½ per cent. stock to an amount not exceeding £2,500,000 upon the security of this rent, and applications are now invited for the full amount at the price of 96½ per cent., payable in instalments spread over the current year. As further security for the issue the Act of 1907 provides that the rent of £87,500 shall be a first charge upon the nett revenues of the joint undertaking, and that the two companies shall be jointly and severally bound to make good, as part of the working expenses of their respective undertakings, any deficiency which may arise in any half-year in the revenues available for the payment of the rent. The stock is one in which trustees may invest, and as the security is undoubted it will meet with a good reception, especially as Home Railway things are at present in favour with investors.

Grand Trunk Pacific Railway Company.

A further £1,000,000 of this company's 4 per cent. debenture stock was offered this week for subscription at the price of 94, payable in instalments of varying amounts at intervals of about one month up to June 1, while a full half-year's interest will be paid on September 1. The money will be applied in the purchase of additional rolling stock for the equipment of the railway, of which about 800 miles are expected to be ready for traffic during the autumn of this year, and in the meantime the rolling stock will be used by the Grand Trunk Company under arrangements made. The stock is redeemable at 105 per cent. at any time after March 1, 1936, on one year's notice, and interest is guaranteed by the Grand Trunk Company subject to certain conditions. Under these conditions the guarantee will rank on the nett earnings of the Grand Trunk Company remaining after payment of all interest on that company's own loan capital and on any other bonds or liabilities guaranteed by it.

Letters to the Editor.

EXPORT SURPLUS.

Sir,—Your explanation is the one usually given, but it is not quite satisfying.

The debt service will probably not exceed ten millions, which leaves about fifteen millions for freight and insurance.

Is it possible to estimate with some degree of accuracy the actual amount paid for these items?

Then, is any of the debt held in Australia? Does it not strike you as strange that, after all these years, with a population of over four millions, less than ten million acres of land are under cultivation?

Yours truly,
L. Breffits.

Castleford, Yorks.

At the annual general meeting of the Life Officers' Association, on Monday, Mr. Colquhoun (actuary and manager of the Legal and General Life Assurance Society), was elected chairman, and Mr. Wyatt (actuary and secretary of the Clergy Mutual Assurance Society) deputy-chairman for the current year.

In consequence of Mr. Reddrop's appointment in London as joint assistant London manager of the company, and of the associated Central Insurance Company, the directors of the Liverpool and London and Globe Insurance Company have appointed Mr. W. T. Batten (at present district manager at Northampton), to be local manager at Bristol, and Mr. A. B. Waters, to be assistant local manager there, and have also appointed Mr. J. H. C. Dawes (at present branch manager at the company's London West-End office) to succeed Mr. Batten as district manager at Northampton.

The Week in Mines.

THE CARRY OVER.

The first settlement of the year which commenced on Monday last in the mining sections proved to be a very pleasant function. Thanks to last week's brilliant run the making-up list was something to do the eyesight good, and this notwithstanding the awkward reaction that started last Saturday and continued until some time after the carry-over had been arranged. But of that we shall say more lower down. Continuation rates were not quite so stiff as on the last occasion, the Bank rate having been reduced in the meantime, and the wild outburst that took place in the Kaffir Circus within the fortnight does not appear to have greatly altered the speculative position, an indication probably that the public has taken a very small part in the game. The general rate in the Kaffir Circus was 7-8 per cent., but Gold Fields, Johnnies, Randfonteins, Modders and Rand Mines were all continued ½ per cent. cheaper. On East Rands the rate began at 5½-6½ and subsequently declined to about 4 per cent. In the Diamond group, De Beers and Jagers were borrowed on at 5-6 per cent., and Premiers were sometimes taken in at this figure, but most of the business was arranged at 3 per cent. On Rhodesians the general rate was 7-9 per cent., Tanganyikas being continued at 5½-6½ per cent., Zambesias at 6-7 per cent. and Chartered at ¾d.-1d. West Africans were carried over at 6-8 per cent., Siberians at 7-9 per cent. and West Australians at 6½-7½, with Fingalls, Oroyas and Perseverance taken in at 5½-6½ per cent. On Broken Hills the charge was only 3-5 per cent., shares still being in short supply, and Proprietarys commanded a "back." Australian Copper shares were continued at 5-6 per cent., Tintos at 4-5 per cent. and Anacondas at 5-6 per cent., while most of the things in the American group cost 7-9 per cent. Kaffir Gold and Finance shares showed some big rises in the making-up list, and three shares, Central Minings, Modders and Ferreiras, were £1 or more higher. Rand mines were up 5/16, Gold Fields, Village Main Reef and Crown Deep 1/16, S.A. Gold Trust and Witwatersrand Townships ⅜, and Apex, Heriots, Modder Deep, Rose Deep and Wolhuter 5/16. H.F., Durban Deep, Robinsons and South Rands were ¼ better, and Luipaards Vleis and Witwatersrand Deep put on almost as much. But the Diamond things again made a bad display. De Beers deferred and preferred fell ⅞ and ¾ respectively. African Concessions dropped ½, Premier preference and deferred ⅜, Jagers deferred 5/16 and the preference ¼, and Griqualand Wests ¼. In the West Australian section Kalgurlis made up 5/16 lower and Tindals fell 5/16, but Hainaults made up 5-32 to the good. Broken Hills were not much changed, Proprietarys making up 3-32 better, while Norths dropped ⅛. Among New Zealands Waihi Grand Junctions were 9-32 lower, and in the Copper list Tintos rose 1¼, Great Cobars 1⅛, Anacondas 1, Bostons ⅞, Newhouse mines ⅝, Utah ½ and Spasskys 5/16. Among the American things Dolores and Alaska Mexicans were ¼ to the good, and Treadwells and Uniteds rose 5/16. Siberian Props, Ooregums and Dharwars all showed a gain of ⅛.

SOUTH AFRICAN GOLD SHARES.

The first check to the New Year Kaffir boom occurred on Saturday last, and Mr. Robinson came in for more abuse on that day than most of us bring on ourselves in a lifetime. That Randfontein capital scheme had spoiled the whole game, insiders, outsiders, hangers on, the interested and non-interested, declared with one voice, and the thirst for blood was terrible to behold. It is, of course, a nasty jar to get beaten at your own game, and while before all else the object of the run up in prices was to entice the public back the opportunity would doubtless have been seized later on to bring forward a few financial plans. Hence the thunder and lightning when Mr. Robinson got there first. Doubtless this bombshell, as the market called it, was an influence in calling a halt to the fierce upward rush, but after such a week a nasty upset was possible at any moment, and could not have been long delayed in any case. The proximity of the settlement would alone have caused a considerable outpouring of shares because, despite all the noise and excitement, we do not gather that the public has come forward to any extent, and the movement has been almost entirely professional. This always means extensive profit-taking before the carry-over, especially when the profits are really worth securing, as they were last week. However, from one cause or another the market saw fit to sulk until Tuesday, and then suddenly discovered that the Randfontein issue was not such a terrible affair after all. Dealers were quite annoyed with themselves for allowing the thing to upset them so, and in a twinkling discovered half-a-dozen reasons why the appeal would not cause the expected disturbance. The public might not subscribe, or the issue would be left to the Randfontein shareholders, or Mr. Robinson might take most of it, and so on. Therefore, on Tuesday the market began to pull round again, and before that day ended a renewal of the boom seemed fairly on the way. Modders sprinted to 7 without the slightest effort, and it is quite probable that prices would have gone ahead in great style once more, except for the staggering intimation that the Premier Company would not pay the 10s. dividend declared last month. This knocked the bottom right out, and people expressed their disgust in terms that completely threw into the shade the language used about Mr. Robinson. East Rands and the subsidiary companies' shares were never a very bright market, and there are persistent rumours of unfavourable developments in the Cason, a circumstance which may affect the negotiations for amalgamation supposed to be going forward.

FINANCE, LAND, AND RHODESIANS.

Land and Finance shares closely followed the course set by Kaffirs, and principal movements naturally occurred in the big things like Central Minings and Gold Fields. Welgedachts had a sharp rise, but whether this means that the company has been able to make satisfactory financial arrangements we do not know. Henderson's Transvaal were offered down to 2s. 6d. on the news that a scheme of reconstruction was being prepared. It is stated that the existing capital of two millions nominal will be cut down to half that amount, and shareholders will be asked to accept 10s. shares, having 7s. paid. Rhodesians were very difficult to move except downwards, but the Cape is supposed to have taken a few Eldorados and Rhodesian Bankets, so that prices for these improved. Tanks, however, went back, and Chartered were a bad market throughout. A meeting has been called for next Thursday to hear an account from the visiting committee of the impressions made by the recent tour, but the market, instead of regarding this as a bull point, stands in fear and trembling of what will be said. It is considered certain that financial matters must be touched upon, the position being absolutely desperate, and there are hints at some plan to enable the company to fulfil its obligations in connection with railway guarantees. Can it be that these Chartered people must at last be compelled to admit insolvency?

DIAMOND SHARES.

Although there have been plenty of exciting incidents in the others, to this section belongs the discredit of providing the principal sensation of the week. The market began very nicely under the influence of a "reassuring" cablegram from Johannesburg telling us that negotiations were in progress between De Beers and the Premier "with a view to taking steps calculated to restore confidence in the diamond market." The irony of it, in view of what was to follow! Mr. Cullinan, chairman of the Premier, said that endeavours would be made to protect the market,

but denied that the mine was to be shut down. The output, however, was to be curtailed to a small extent, and a full statement of the steps decided upon was promised at the annual meeting. The market wondered a little how a conference between the chief producers would force the Yankees to resume buying, but that was a detail, because prices were going up and things were bound to be all right and above board. On Wednesday there was a remarkable run up in Premiers to 6¾ and De Beers to 14½, and there could no longer be doubt that the conference had put an end to the crisis, and everybody was buying diamonds once more. Then followed the explosion. After a fair-sized bale of shares had been unloaded on the rising market a rumour got into circulation that the dividend on Premier deferred declared last month would not be paid, and in less than half an hour Premiers had slumped £1 and De Beers 10s. Of course, the news was subsequently confirmed—we deal fully with the matter in another column—and the market has since been in a condition of abject despair. Paris was victimised as ruthlessly as London, and has been heaving out Kaffirs in bales ever since.

Australasians.

Although the settlement showed that shares were scarce for delivery, Broken Hills were early offered on local account, and prices went down, but on the various metals recovering a better tendency set in. In a good many cases initial losses were recovered, but the colony took little interest in the market throughout the week. Among West Australians Hainaults were bid up on prospects of good developments at the 850 ft. level, and Horse Shoes, Fingalls, and Oroyas also hardened, while Kalgurlis picked up from a poor start. Northern Blocks and Associated both closed rather off. In the New Zealand list Waihi Grand Junctions were a better market, and Talismans also hardened.

Copper and Tin Shares.

Copper shares were a very good market throughout, partly owing to the steady rise in the metal and partly to the run-up in Yankees. All the American shares went ahead in fine style, and Rio Tintos showed a sharper rise than anything seen for some time. They commenced about 66½, and within a couple of days touched 69⅜ bid. Other leading shares followed, some way behind, of course, and Capes, Great Cobars, Lyells, and Tharsis showed moderate gains. The close was not at the top, thanks to the upset elsewhere, but most shares show improvement on balance. Tins were irregular, but the prominent shares relapsed a little.

Miscellaneous.

In the Miscellaneous groups Indians hardened a few pence, but Ooregum ordinary subsequently eased off, together with Balaghats and Nundydroogs. Siberian things were a little better, and the American group was pretty firm. A story that the El Oro Mining and Railway Company's plant had been destroyed by fire caused the shares to weaken at one time, but a reassuring cable put them back to the previous figure. A fire has occurred in the town of El Oro, but it was of little consequence, and the damage done was slight.

MINING NEWS.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Transvaal Gold Returns.—The past year was wound up in brilliant fashion on the Rand, and the December production of 583,526 ozs. was a long way in front of any previous achievement. Compared with the preceding month there was an increase of 33,725 ozs., and against the corresponding period of 1906 the gain was 33,359 ozs. The previous best was in August last, when the mines yielded 555,027 ozs. For the entire year 1907 the production was 6,451,384 ozs. or an improvement of 664,767 ozs. over 1906, the increase in value being no less than £2,823,751 at £27,403,738. In the subjoined tables we show the output and value for six complete years :—

* Includes £33,766 not declared previously.

Native and Coolie Labour.—The labour returns are also highly satisfactory. It is unnecessary to again refer at length to our oft-repeated contention that if the mine owners willed it there need not be the slightest difficulty in securing an adequate supply of native labour. The number of natives has been steadily increasing month by month, and a glance at the above table will show that starting from the Chinese high-water mark, which occurred in January 1907, the natives employed have increased almost 23,000, while the number of coolies repatriated or disappeared in other ways is only 18,152, and we must not forget that the native returns leave out of account the Robinson group of mines which always has more labour than it needs. The returns for December show that the natives distributed to the mines by the Witwatersrand Native Labour Association numbered 9,784, as against 7,003 lost by time expiration and other wastage, making the gain for the month 2,781, and increasing the number of "boys" employed to 106,290. In the subjoined table are shown the number of natives and Chinese employed on the Rand during the past year :—

Month.	Natives Joined.	Natives Left.	Nett Gain or Loss.	Natives Employed end of Month.	Chinese.
December, 1906	9,843	6,789	3,054	81,231	52,889

Nett Loss.

Rhodesian Mine Crushings.—Rhodesian gold mining unfortunately makes very little headway. The December return of 53,113 although showing a good increase over November was by no means the best attained, having been exceeded on five previous occasions. For the whole of the past year the production of gold was 612,053 ozs., or only 60,178 ozs. more than in 1906, and glancing down the list we find that the shares of just three Rhodesian gold mining companies stand at a premium, two of them being the Bankets things and four only have paid dividends during the past 12 months. The following table gives the total monthly returns for 1907 and the previous four years :—

	1903. ozs.	1904. ozs.	1905. ozs.	1906. ozs.	1907. ozs.
January ..	16,245	19,359	32,531	42,950	47,048

HENDERSON'S TRANSVAAL ESTATES.—So this important undertaking is to follow the course taken by so many other South African enterprises, and submit itself to reconstruction. The details are quite simple, but a little more necessary information might have been furnished. We will just point out where the circular setting forth the scheme is lacking in essentials, and leave the shareholders to ask the necessary questions at the meeting on Friday next. It may first be noted that the annual report was issued as recently as December last, and the directors then gave no hint that anything so serious as a drastic writing down of capital and large assessment on the shares was in their minds. Perhaps at the time they had no idea of such a thing, and if so the necessary arrangements for reconstruction have been made in double quick time. In the report we were told that steps were being taken for the renewal of the debentures falling due in March next, but apparently the holders did not see the force of leaving their money with such a company, and the attempt to place the unissued £100,000 debentures was likewise unsuccessful. Other expedients for raising money having proved failures, reconstruction was the only thing left, so we are assured. The company has a nominal capital of two millions, and this will be promptly cut down by half. At present 1,770,386 £1 shares are issued, and holders are invited to take in exchange a similar number of 10s. shares, credited with 7s. paid up, thus leaving a liability of 3s. per share. The subscription of the shares will be guaranteed—by that singular concern the Share Guarantee Trust, the directors might have added. Who are the people behind this thing in addition to Mr. Tilden Smith? One of the questions to be asked at the meeting is the terms on which the underwriting is done, so that shareholders may know how much of their 3s. is to disappear in this direction. The directors consider the guarantee an absolute necessity, which we do not, and according to the company's solicitors this prevents the company being registered in England, because the new Companies Act has not yet come into force. Surely a most remarkable interpretation of the old Acts. However, the new undertaking is to be registered under the laws of Rhodesia, although the general administration will still remain in London, and the meetings be held as hitherto. It does not seem that a particularly good case has been made out for asking the shareholders to find over a quarter of a million of money, but in any case they might be given the chance before bringing in an intermediary as guarantor.

RAND AMALGAMATIONS.—We referred last week to several rumours of probable amalgamations of the less important Rand Mines, and now have particulars of one that has taken definite shape. At present only brief details are available, and before the special meetings of the companies concerned are held in Johannesburg on March 27 full information will be circulated among the shareholders. Altogether five companies are to be joined together—namely, the City Deep, the South City, the Wolhuter Deep, the South Wolhuter, and the Klipriversburg Estate and Gold. The first-named will be the absorbing company, and the scheme provides for the reduction of its capital from £450,000 to £247,500, leaving the reserve shares to the number of 150,000 as at present. The City Deep capital will then be increased to £1,250,000 by the creation of 852,500 new shares, the latter, together with 17,305 of the reserve shares, being used for the absorption of the four remaining companies. Thus the South City would get 228,305, or at the rate of one for each two now held, South Wolhuter, 343,125, being in the proportion of nine for every 20, the Wolhuter Deep, 215,875, which will give 11 for every 20, and the Klipriversburg, 82,500. Shareholders of the City Deep would receive shares in the reconstructed capital at the rate of 11 per 20 in the present capital. All uncalled capital in any of the companies concerned is to be called up, and the four vendor companies are to be wound up if the agreement is confirmed. Until full particulars are available we naturally refrain from making any comment on this proposal, merely observing that in every case important blocks of shares were issued at heavy premiums, that present quotations show a terrible depreciation, and that not one of the companies has yet produced a pennyworth of gold. Is it not the case also that Mr. Robinson claimed to have about £1,500,000 in cash or calls available for the work of development? What has become of that asset?

DOLORES, LIMITED.—Along with the third annual report of this undertaking a proposal is submitted for its dissolution, not on account of any want of success, but rather because the company's affairs are so flourishing. There are two concerns, this one and an American company known as Dolores Mines, possessing identical capitals apart from the denomination of the shares, and the position is that the English concern owns all the shares in the American undertaking except the directors' qualification, and the latter holds the [illegible] the mines in Mexico. Now a [illegible] in the English company residing in America, [illegible] directors of the American company, [illegible] existence of the English one. [illegible] to wind it up and to distribute the American company's shares among the English shareholders [illegible] that nine-tenths of the shares in Dolores, Limited, are [illegible] the other side, and it does seem a waste [illegible] organisation. There is also the inconvenience and risk in the case of the American shareholders in having to transact Dolores, Limited, shares in exchange for a trust [illegible] for the purpose of collecting the dividends. [illegible] death and legacy duties can be declared, and the [illegible] mean direct and more expeditious payment of dividends. [illegible] seem cogent reasons for the proposed alteration, and as a London committee consisting of the present directors of Dolores, Limited, will come into existence for the purpose of keeping the European shareholders periodically informed of the progress of events at the mine there is nothing to be urged against the alteration. According to the report of the London company an issue of 66,000 new shares was shortly after followed by the payment of the first dividend of the company, and during the financial year ended on September 30 three quarterly dividends of 3 per cent. each were distributed, a fourth at the same rate being paid on November 25 last. "According to advices received from the directors of Dolores Mines, the mine appears to have reached a point in its development at which its present and future prosperity is assured with an equipment and surface constructions very nearly completed for the handling of an output of ore on a scale in excess of what was originally intended and provided for, with the result that the company is now capable of paying dividends at a higher rate than heretofore." All this seems very encouraging, and the company's affairs are evidently conducted in a business-like and cautious manner.

MANICA COPPER DEVELOPMENT.—Someone paid 13s. 6d apiece for the shares of this company during the week, and the speculation may turn out all right. Anyhow, the proposition seems straightforward enough, the chief fault that we can find being the failure to issue periodical reports and statements of accounts. Those now submitted cover three years to December 31 last, but the omission has been partly made good by the issue of circulars containing full particulars of the progress of the works. During the period under review the development of the company's property in Manicaland has proceeded steadily, and the copper deposit located in the east end of the property is opening up satisfactorily. The manager reports that the ore blocked out on three sides and available for treatment amounts to about 12,000 tons, worth 7 per cent. copper and 5 dwts. of gold per ton. An important discovery of gold in the shape of calcite veins has recently been made in the lower levels of the copper workings. In fact, matters have so far progressed that the directors felt justified in embarking upon the immediate erection of machinery both for the treatment of the ore already available and the more expeditious development of the mine in depth. Orders are accordingly being placed for a complete equipment of electrically operated mining machinery, including rock drills and a mill and concentrating plant capable of dealing with 500 tons of auriferous ore per month. The mill has already been purchased and is now on the property and the necessary surface works, with the exception of the water race, have been practically completed. The cost of the machinery and of the further development work contemplated has been provided for by the issue in December, 1907, of £10,000 6 per cent. mortgage debenture bonds repayable at par in three years or earlier, at the option of the company. At the general meeting on Tuesday next the manager, who is now in London, will make a full statement to the shareholders regarding the position and prospects of the mine. Expenditure at the mine to date has been £23,882 and London administration from date of incorporation, May, 1902, has cost a nett sum of £5,044. The cash balance is £7,759, but sundry loans have been raised to the amount of £5,025.

BRITISH COLUMBIA MINERAL OUTPUT.—The Agent-General for British Columbia is in receipt of a cablegram from the Mining Department of the province stating that an approximate estimate of the mineral production for the past year shows—Gold, $4,830,000; silver, $1,850,000; copper, $7,680,000; lead, $2,310,000; coal, $6,500,000; coke, $1,360,000; miscellaneous, $1,200,000. Added together, these figures give a total of $25,730,000 as against $24,980,546 in 1906.

NEW ZEALAND GOLD PRODUCTION.—The past year's results were somewhat disappointing, the total yield showing a heavy falling off compared with the preceding year. December again made a poor display, the output being 45,839 ozs. valued at £181,720 compared with 51,040 ozs. worth £208,080 in the corresponding month of 1906, bringing the full year's production to [illegible] valued at £2,027,490, a drop of 55,035 ozs. and £213,414 in value in comparison with 1906. Notwithstanding a good wind up, the output from the Kolar Goldfield for the past year fell a good deal short of the previous year's production, the difference being over 32,000 ozs., chiefly due to the failure of the Mysore West and Wynaad. The December yield was [illegible] just about 6,000 ozs. better than the preceding month, due to scaling of the plates and other causes.

It is officially announced that the long-established private bank of Messrs. Lambton and Co., of Newcastle-on-Tyne, and elsewhere, has amalgamated its business with that of Lloyds Bank, Limited.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for the week ended Jan. 14, $3.498, increase $776; aggregate from July 1, $143,888, increase $42,790.

Argentine North Eastern. — Traffic receipts for week ended December 13, £3,268, decrease £761; aggregate from July 1, £70,375, decrease £5,726.

Assam Bengal.—Traffic receipts for week ended December 14, Rs. 74,198, decrease Rs. 1,443; aggregate from July 1, Rs. 23,10,074, increase Rs. 1,29,362.

Bilbao River and Cantabrian.—Traffic returns for November, £9,071, decrease £2,123; aggregate from January 1, £100,047, decrease £12,676.

Buenos Ayres Central.—Gross receipts for December £9,952, decrease £1,355; aggregate from Jan. 1, £132,935, increase £10,966.

Canadian Northern Railway.—Traffic receipts for week ended Jan. 7, $141,200, increase $34,100; total from July 1, $5,449,100, increase $1,425,900.

Egyptian Delta.—Traffic receipts for week ended December 28, £6,683, decrease £357; aggregate from January 1, £205,173, increase £18,932.

Lucknow Bareilly Railway.—Traffic receipts for week ended December 14, Rs. 24,846, decrease Rs. 3,482: aggregate from July 1, Rs. 6,26,030, increase Rs. 8,098.

Midland Uruguay.—Receipts for month of December, £6,808, decrease £564; aggregate from July 1, £37,185, increase £2,570.

North Western of Uruguay.—Traffic receipts for Dec., $17,600, decrease $3,304; aggregate from July 1, $121,864, increase $22.

Quebec Central Railway.—Traffic receipts for the 1st week of January, $11,208, decrease $135; aggregate from January 1, $11,208, decrease $135.

Quebec and Lake St. John.—Traffic receipts for Nov. $63,585, increase $909, aggregate receipts $600,261, increase $54,603.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended December 14, Rs. 20,519, increase Rs. 4,626; aggregate from July 1, Rs. 5,16,537, increase Rs. 39,995.

Uruguay Northern.—Gross receipts for month of Oct., £2,235, increase £923; aggregate from July 1, £7,502, increase £802.

White Pass and Yukon Railway.—Traffic receipts for week ended December 31 amounted to $3,560.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending January 11, £1,151, decrease £303; aggregate from January 1, £1,484, decrease £830.

Cockermouth and Keswick Railway.—Receipts for week ending January 11, £709, decrease £30; aggregate from January 1, £1,095, decrease £174.

East London Railway.—Traffic receipts for October, £3,892, decrease £546.

East and West Yorkshire Union Railways.—Traffic receipts for week ended January 11, £422, decrease £27; aggregate from January 1, £816, decrease £46.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric. — Traffic receipts for week ending January 8, £547, decrease £83; aggregate from Jan. 1, £547, decrease £83.

Blessington and Poulaphouca.—Traffic receipts for week ending January 8, £6, decrease £2; aggregate from January 1, £6, decrease £3.

Bristol Tramways and Carriage.—Traffic receipts for week ending January 10, £4,503, decrease £251; aggregate from Jan. 1, £9,041, decrease £343.

British Electric Traction.—Receipts of all the Associated Companies for the week ending January 10, £24,536; 427½ miles.

Burnley Corporation.—Traffic receipts for week ending January 11, £1,156, decrease £28; aggregate from January 1, £2,383, decrease £6.

Dublin and Blessington.—Traffic receipts for week ending January 8, £90, decrease £8; aggregate from January 1, £109, decrease £19.

Dublin and Lucan.—Traffic receipts for week ending January 10, £86, decrease £2; aggregate from Jan. 1, £124, decrease £19.

Dublin United.—Traffic receipts for week ending January 10, £4,754, decrease £255; aggregate from Jan. 1, £6,799, decrease £237.

Edinburgh and District.—Traffic receipts for week ending December 28, £4,918, increase £542; aggregate from January 1, 1907, £257,110, increase £2,644.

Hastings and District.—Traffic receipts for week ending January 9, £667.

Isle of Thanet.—Traffic receipts for week ending January 11, £173, decrease £65; aggregate from Oct. 1, £4,281, increase £101.

London County Council.—Traffic receipts for week ending January 4, £29,016, increase £3,542; aggregate from April 1, £1,254,182, increase £208,788. Miles 115¾, against 113¾.

London General Omnibus.—Traffic receipts for week ending January 11, £17,381 decrease £2,427; aggregate from Jan. 1, £33,969, decrease £4,320.

London Road Car.—Traffic receipts for week ending January 11, £3,417, decrease £3,339; aggregate from Jan. 1, £5,836, decrease £4,638.

London United.—Traffic receipts for week ending January 11, £4,845, decrease £526; aggregate from January 1, £7,732, decrease £1,423.

Provincial Trams.—Traffic receipts for week ending January 11, £1,412, decrease £86; aggregate from Oct. 1, £22,271, increase £829.

Rossendale Valley.—Traffic receipts for week ending January 10, £158, decrease £29.

Sunderland District.—Traffic receipts for week ending January 8, £423, increase £75; aggregate for 10 weeks £4,650, increase £784.

Yorkshire (West Riding) Electric.— Traffic receipts for week ending January 12, £1,002, decrease £15; aggregate from January 1, £2,022.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending January 14, £17,624, increase £710; aggregate from January 1, £36,402, increase £1,601.

Auckland Electric.—Traffic receipts for 25 days ending December 31, £11,367, increase £1,554; aggregate from January 1, £137,719, increase £8,019.

Brisbane. — Traffic receipts for month of December, 1907, £15,328, increase £1,829.

British Columbia Electric.—Nett earnings for November $86,047, increase $30,272. Aggregate nett earnings, including income from investments from July 1 to Nov. 30, $407,476, increase $117,168.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for 7 days ending January 14, £7,406, increase £619.

Calcutta. — Traffic receipts for week ending January 11, Rs. 50,096, decrease Rs. 11,436; aggregate from January 1, Rs. 1,04,556, decrease Rs. 27,772.

Cape Electric.—Traffic revenue for month of December, Cape Town, £11,679; Port Elizabeth, £3,751.

Carthagena and Herrerias.—Traffic receipts for the month of December, £3,254, decrease £2,252; total from January 1, £51,131, decrease £1,396.

Geneva Trams.—Earnings for November, fr. 188,351; increase fr. 8,024.

Kalgoorlie Electric.—Traffic receipts for November, £3,790; aggregate from January 1, £43,715.

Lisbon Electric.—Earnings for November, milreis 46,117.

Madras Electric.—Traffic receipts for fortnight ended January 15, Rs. 19,685, increase 14 per cent.; aggregate from January 1, Rs. 19,685, increase 14 per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for December, £49,000.

Mexico.—Nett earnings for month of September, $203,525, increase $21,796; aggregate nett earnings from January 1, $1,545,283, increase $93,126.

Perth (W.A.) Electric. — Gross receipts for week ended January 10, £1,528, decrease £198; aggregate from January 1, £2,269, decrease £303.

Rio de Janeiro.—Nett earnings for November, $213,640; aggregate from January 1, $1,951,966.

Sao Paulo.—Traffic returns for November: nett earnings, $117,773, increase $12,773; aggregate from Jan. 1, $1,227,786. increase $53,527.

Twin City Rapid.—Traffic receipts for the month of November, $497,428, increase $38,791; aggregate from January 1, $5,552,879, increase $402,984. Nett traffic receipts, $233,018, decrease $649; aggregate from January 1, $2,852,445, increase $105,004.

The Investors' Review.

The Week's Money Market.

BANK RATE 5 PER CENT. (Reduced from 6 per cent. on January 16.)

Norfolk House, Friday Evening.

Nothing extraordinary is to be inferred from the further reduction in the Bank rate. When tension slackens in the money market rates always fall rapidly, and the bill brokers may be said to have aimed at a 5 per cent. Bank rate from the first. The fine working rate on three months' remitted bills had not been much better than 4½ per cent. for about a week before it came down to 4⅜ and 4 7/16 early in the present week. A 5 per cent. Bank rate was, therefore, more than anticipated, and yet the market has now, it would seem, begun to play for a further decline. Several important houses yesterday gave 4¼ per cent. as the working rate for both 60 and 90-day bank bills, and the price rate on four months' bills was 4⅛ per cent., while sixes could be freely disposed of at 4 per cent.

These rates have been beaten to-day, so convinced is the market that the Bank rate must drop by ½ per cent. stages to 4 per cent. within the next fortnight. So three months' bank paper could be discounted this morning at 4⅛ to 4¼ per cent., and the rate on sixes dropped back to 3⅞-4 per cent., with, however, some people still quoting 4 to 4⅛ per cent. The market was steadier at the close. Short loans were also weaker at 3 to 4 per cent. for the day, and 3¾ to 4 per cent. for seven days.

Both the Bank return and the gold prospects tempt dealers in credit to work for a 4 per cent. Bank rate, and they pay little regard to the fact that the Bank of France has retained its rate at 3½ per cent., so that its weekly exhibit is not over strong, particularly in view of the complications the Republic is drifting into in Morocco. The gold held by the French State Bank is still barely 54 per cent. of its active note circulation, which went up £127,000 last week to £199,448,000. But a reduction in the Bank rate is looked for at once, for money is cheap in the Paris open market and easing down elsewhere on the Continent, especially in Berlin, where the reduction of 1 per cent. in the Reichsbank rate to 6½ per cent. has been followed by a decline in the open market discount rate to 5 per cent., and an easier loan market.

Market optimists here are especially fortified in their views of the future by the Bank of England return, which is better than many expected. The nett gold efflux of £613,000 checked expectations of a large increase in the reserve, but trade is slowing down throughout the country, and speculation has not yet revived to an extent demanding important assistance from the banks; the tax collector is also working with zeal, and, as a consequence, no less than £2,207,000 in coin and notes—£1,633,000 in coin and £574,000 in notes—came in bulk during the Bank week from the active circulation or from bank hoardings, so that the nett expansion in the banking reserve was £1,594,000, bringing its total up to £25,807,000, or £3,274,000 more than at the same date last year when, on a poorer-looking display, the Bank rate was also lowered from 6 per cent. to 5. Other deposits, too, look more comfortably full than they really are at £44,548,000, and here we come to the end of the favourable symptoms, for not only does this aggregate embrace a large amount of Japanese money, but the margin it gives, were it wholly at the market's disposal, is inadequate in view of the demands of the Exchequer, whose balances, it should be noted, are unusually low. Their smallness, combined with the real, though hidden, poverty of the market, must mean that the Bank of England can, when it chooses, make loan rates as tight as a drum. There is, however, no necessity for it to do that just now.

Grant the Bank to be in control, sanguine dealers say, and we have still the influx of gold to reckon upon against a reduced South American demand, and a probability that the metal will soon be either coming back from New York or going from thence to Buenos Ayres in relief of our market. And there may be something in this Argentine diversion if it be true that the United States grain dealers have been compelled to buy part of the Argentine wheat crop because they over-sold, or over-pledged their own when creating credit with which to buy gold. That representatives of United States houses were touring through the Argentine wheat areas some time ago we know to be a fact, but they gave out that they had come merely to inspect and acquire knowledge. In Argentina, however, it was believed they were buyers, and as their own harvest is short and the Canadian one lamentably deficient, it is quite possible the gold now gathering in New York may have to go South instead of coming East. This might be good for us in a sense, but it could hardly be helpful to wounded American credit.

The general outlook for gold is more favourable than seemed possible a short time ago. The Bank received £115,000 in bought bars to-day, and altogether next week's arrivals amount to about £557,000, of which £369,000 is due in from South Africa on Monday, and as the open market price for bars is only 77s. 9d. per oz., the probability is that the Bank will get the whole of this except some little amounts taken for the trade or for India. Altogether the gold now on its way here amounts to about £1,800,000.

The largest call due next week is £950,000, payable next Tuesday on the new Indian loan, but Monday brings a call of £880,000 on South Manchurian Railway bonds.

SILVER.

The news of the improved outlook in India caused buyers to come in at the end of last week, and by Monday quotations had been lifted to 26 1/16d. per oz. for cash and 26¼d. per oz. for future delivery. Requirements on this account, however, were readily met, and a relapse to 25 15/16d. and 25¾d. per oz. followed, but on Thursday a small speculative demand was stimulated by a belief that Germany would soon be in the market. Sellers were inclined to hold back, and prices hardened again to 25¾d. and 26 1/16d. per oz., but there was no real strength at these figures, and to-day the market closed dull with sellers predominating at 25⅝d. and 25¾d. per oz. respectively. Applications for the Rs. 60,00,000 of India Council drafts on Wednesday reached a total of Rs. 2,19,30,000 in bills and Rs. 1,65,00,000 in telegraphic transfers. The amounts allotted were Rs. 26,71,000 in bills and Rs. 33,29,000 in transfers, tenders at 1s. 3 29-32d. and 1s. 3 15/16d. per rupee respectively receiving about 12 per cent. Next week Rs. 75,00,000 will be offered.

Mr. J. B. Robinson left for the Transvaal by the *Kenilworth Castle* on Saturday last.

With the object of removing a somewhat prevalent misunderstanding, we are officially asked to state that the board of directors of the Randfontein Estates Gold Mining Co. (Witwatersrand), Limited, have no intention of offering at a discount any of the 6 per cent. participating certificates which may not be subscribed for at par.

The Stock Markets.

The crisis is over everybody tells us, and the position of Money markets everywhere has undoubtedly changed for the better so far as reductions in the active circulation of currency and in rates of interest have taken place. Money is cheaper, and at the end of last week the Austro-Hungarian Bank reduced its rate from 6 per cent. to 5. On Monday, too, the German Reichsbank brought down its discount rate from 7 to 6½ per cent., and open market rates are easier still. In New York likewise the price of time money has fallen from 6 per cent. to about 5, and the rate for call loans has been reduced to about 4 per cent., sometimes less. This is altogether what was to be expected. A strain of the kind markets had to submit to in the end of last year could not possibly continue without bringing about such a general liquidation as would have put modern civilisation in peril of its life.

None the less is it to be regretted that the crisis did not rid the world of finance of some of its great monopolists and their instruments, and the worst of the present easier situation is that it has neither solved nor dissolved anything. A pause has occurred in the manufacture of new securities, but only a pause, and the game of anticipating wealth by means of credit is being renewed with all the greater energy because of the temporary suspension. Because this is so we have no great faith in the stability of markets. Any elasticity displayed by them is likely to be damped, crushed down by the avalanche of new issues. Play, in other words, is to go on as before, and upon the towering mass of existing insolvency still further accumulations of assetless credit are to be heaped. The investing community required a rest. It has been drained of its means, and forced to resort to new credit in order to sustain old and often used up credit to an extent unparalleled. In other words, the wealth represented by genuine savings has been anticipated in all directions to an extraordinary degree, and those people whose capital is already fully committed and whose credit has also been engaged in sustaining new enterprises, subscribing for new loans of all qualities, are again being called upon to exercise their ingenuity in finding financial expedients in order that the new demands upon them may, in appearance at least, be gratified. This is not well; good in no sense either for states or individuals.

And talking of states—how is it possible to believe that while the expenditure of governments, national and provincial, continues on the present scale, anything approaching to genuine health can return to the world's Money markets? The other day in that most delightful book "Coke of Norfolk" we came across a reminiscent saying of that remarkable man to this effect: "You will scarcely believe that when I entered Parliament in 1776 this was *an untaxed country*. There was then no poor rate; every man was able to brew his own beer and every family to bake its own bread." We have travelled so far since that day as to be now in danger of national paralysis greater and more deadly than the paralysis which overtook the three kingdoms at the close of the exhausting struggle with Napoleon. To avert this danger a far more startling revelation of financial hollowness was necessary than anything given by the crisis now for the time being surmounted. Nothing except a shock that will reduce the devouring zeal of the tax-gatherer, or rather of the great spending departments of all nations, will give us hope that a permanent return to a better state of things is possible without an open declaration of national insolvency. Our present Government contains some hard-working members, men honestly striving to do good, wrestling for thrift in the handling of the nation's money. One of these Ministers, we believe, can boast of having saved £1,000,000 in his department since he took office, but there are others of his colleagues who deserve no commendation such as he has earned. We regard the present political heads of the army and navy as mere screens hiding the real danger to the country's prosperity.

What, then, is the use of talking about improving markets, a return to active investment business, or about anything of that kind, while the very source of the people's wealth is being tapped and drained away by the horrible peace charges laid, not only on the British people, but upon the French, the German, the American, the Russian, and the Austro-Hungarian peoples? The money that the workers and traders might save is everywhere being devoured in preparations for a war that no nation could wage, were it to arrive, without becoming instantly bankrupt. Keep these points in view when reading financial articles and listening to the glowing tributes continually being uttered about the recuperative power of markets and the solidity of the nation's wealth.

Trustee Securities.

Markets appear to be conscious that everything is not right, for the reduction in the Bank rate to 5 per cent. brought no advance in prices. On the contrary, it was the signal for realisations, and most departments of the Stock Exchange left off flat or pithless last night, the truth being that the recent advance was almost entirely a gamble. Insiders and a few of their followers bought in anticipation of cheaper money, and when its arrival was signalled by the lower Bank rate they endeavoured to secure the profits shown by the advance they themselves, and not the steady-going investor, had brought about. Here, as in the United States, the movements are the outcome of professional energy, and all reliable people we meet tell us that purely investment business has again fallen very quiet. It has never been so large as usual this new year, no doubt because there has not been so much money saved, and the inflow of spare cash is already apparently exhausted.

Consols accordingly remain where they were a week ago after a feeble little stir now and again in the price, and there has been no appreciable recovery in the market for India stocks, with which the public has had a disgust through some scandals said to have arisen in connection with the new loan. Early information of its approach leaked out from somewhere, and reached a firm or firms in the Stock Exchange who sold for the fall in anticipation, not, however, directly and openly to their colleagues in the market, but in a roundabout way through a firm or firms of provincial brokers. If this story is true—and we find it believed in good quarters—the morality of our Stock Exchange must be sinking to the level of that of New York, where the principles of business appear to be modelled, like the countenance of the modern Yankee, on the ethics of the Red Indian—the more scalps, the greater glory. The new Indian loan, however, was to all appearance triumphantly placed, but its large over-subscription has left heavy lumps of the scrip in the hands of middlemen, and their unloading may keep the market for all Indian securities limp for some time to come.

Other new issues have not gone off well, and underwriters of the new Cape loan have had to take about 90 per cent. of the whole. This should be a good lesson to the Government of that colony to go slower and boast less. Even the Buenos Ayres Great Southern Railway debenture issue has not been received with the least enthusiasm, nor do we hear of any eagerness to subscribe for the new Grand Trunk Pacific issue, the truth being that there is little or no unengaged capital or credit available for these new loans. The country cannot have passed through such a period of anxiety and drain upon its resources as the recent high rates of money implied and still remain flush of disposable means. Corporation and Colonial stocks are quiet enough and steady as a rule, with the exception of Cape and Natal issues.

Contangoes.

Money was not so cheap at the banks for lending to the end of the month as had been expected. Their usual charge to the ordinary borrower was 5½ per cent., and we are not surprised that this rate caused much dissatisfaction to the market. It was a ½ per cent. too high, in view of the fact that seven-day loans outside were sufficiently abundant at 4¼ to 4½ per cent., and inside the market rates often reflected the outside ease, so that it was not always possible to relend there at a profit. Instead of 7 to 8 per cent. or more on Home Railway stocks, all charges allowed for, lenders had to be satisfied with 6 per cent. in many instances, and sometimes with less. On other stocks, however, such as North-Western and Brighton "A," the rate was as high as, and sometimes rather higher than, at the end of December. On the great bulk of Foreign Government stocks the charge was 1 per cent. down, and on a good many securities in that group it was difficult to secure 5 per cent. Five per cent. was also a fairly common rate on United States Railroad shares, the account in which, however, is always an artificial one so far as our market is concerned. Money was less costly, too, on Argentine Railway stocks, but there the minimum rate was 7 per cent., a profitable one enough.

Foreign Government Stocks.

The ease of money in Paris and the lower rates now current in Berlin have assisted operators in Foreign Government securities, and they are often somewhat better than they were a week ago, but a prominent exception is found in the second issue of Japanese 4½ per cents., which have been depressed, and the whole Japanese group is adversely influenced by the postponement of the Budget and the exceedingly formidable totals which it is said to have reached. Argentine securities, however, are better; in fact, all South American things show a fair steadiness or occasional improvement, and Russian are naturally sustained to aid the coming loan; but there has been no recovery in German or Prussian stocks, which is not surprising in view of the moderate response made to Prussia's call for more money.

Home Railway Stocks.

These promptly went flat on the lower Bank rate, and "bulls" of them are by no means helped by last week's traffic receipts, which show a decrease of £55,011 on the preceding week, bringing the aggregate increase to date down to £7,959. But the truth is all the buying has been speculative, and money was not so cheap at the settlement as had been expected. For this and other reasons the changes on the week are generally adverse, and Caledonian and South-Eastern deferred have both been prominently flat as well as Great Eastern ordinary, Great Central preferred alone finishing at a substantial improvement. A very poor business continues to be done amongst guaranteed and preference issues, but prices move up still when they change.

United States Railway Shares.

A tempestuous kind of week has been passed in the Yankee Railroad market, but at the end the professional speculators in New York succeeded in establishing higher prices for many of the leading counters, although Thursday brought renewed heavy selling on Wall Street. The market then became flat because the earlier buyers were unloading and trying to get profits by the usual trick of propping one or two special stocks and hoisting their prices in order to unload others, and the improvement of from $6 to $9 in shares like Milwaukee, Illinois Central, Louisville, New York Central and Reading means little more than a product of this manœuvre, for the trading is nearly exclusively between scalpers on the "bull" or "bear" side, and we hold firmly to the opinion that the less the public touches these shares the better. Now and again an outside player might make a little money, but as a rule he must lose, and no one ought to buy these shares as an investment in view of the bankruptcies amongst them still to come and of the certain decline in prices. Union Pacific shares were the only prominent exception to the hoist of the week, and they have been pressed for sale by the gamblers on various pretexts besides the poor traffic returns, but principally because Harriman has been ordered by the Court to answer the questions put to him by the Inter-State Commerce Commission

regarding his stock-jobbing with the company's funds. The bond market has been firm, but still on American impulses, and there is an exception here also in the weakness of Erie general lien bonds, natural enough when the difficulties of the company still suggest the probability of its early bankruptcy.

COLONIAL AND FOREIGN RAILWAY STOCKS.

Canadian Pacific shares have been upheld most of the week by the "rights," amounting to at least $9, accorded to the old shareholders in the price at which the new capital has been allotted to them. Whether the market will, now that these rights are deducted from the price, continue firm, is more than we can say, but it may do so for some time because the "bear" account open inside the Exchange is enormous. It is entirely this "bear" account which holds the price up and not the state of business in Canada which is the reverse of flourishing, seeing that there is little or no crop to be exported. Grand Trunk stocks have been weaker, particularly the third preference, partly because there is nothing to stimulate speculative buying in that quarter but also on the new issue of Grand Trunk Pacific debentures. Some oddments of Canadian Railway bonds have, however, been put up, noticeably Temiscouata certificates.

Beyond the rather hesitating appearance of the Argentine group of railways, there is little or nothing special to be said about the Foreign Railway group, which, however, retained their prices fairly well, and there has been a prominent jump of 8 in the first mortgage debentures of the Carthagena Railway Company. Some of the Antofagasta debenture issues are also better, but not the ordinary and preferred stocks. The public has been attracted to Leopoldina stock, and it, too, has risen sensibly on the week, but the Mexican group has, on the whole, been heavy with speculation therein languid.

BANKS, BREWERIES, AND OTHER STOCKS.

A decline of 4 to 4½ took place in Hongkong and Shanghai Bank shares on the dividend announcement, which, being misinterpreted, prompted a certain amount of selling on a slow market. There was a rally yesterday. Other Bank shares have usually gained a little when they moved, but very few show any change on the week. Bank of Egypt shares, however, are 2½ up, and Standard of South Africa 2 up, but Union of Australia have fallen 2. The movements amongst Brewery securities are monotonously downward, as usual, with hardly an exception, and Bieckert's ordinary stock has dropped 15.

Here and there a little life has been noticeable amongst Commercial securities, such as Burmah Oil shares, United Lankat Plantations shares, Louise and Co.'s ordinary, Calico Printers ordinary, and one or two others, but generally speaking the Industrial market has been as idle as usual, and it need not, therefore, be lingered over. The rise in United Lankat shares is due to the maintenance of the 40 per cent. dividend, and debentures have improved in some instances on a little buying, induced by the tempting lowness of prices. For all that, the Industrial bond market is not a particularly enticing one. Motor company securities have been steadier than of late, because left alone.

THE REST OF THE MARKET.

Although a good many prices have moved up and two or three down amongst Electric securities, there is nothing particular going on there, and the mere fact that a daily bargain or two causes a jump or the reverse does not warrant any waste of space on a detailed description. Shawinigan Water Power bonds appear to have been in some request, as well as the Canadian General Electric shares and Mexican Light and Power bonds, so prices for these are higher, and the shares and debentures of the various Electric companies in London have improved in several instances on very small business.

The changes amongst Financial, Land, and Investment securities are rare enough, and we need only note an advance in Hudson's Bay shares to 77, induced, we fear, as much by the magnitude of the bear account as by anything else. Debenture Corporation ordinary and preference stocks have been put down. A large number of Financial Trust issues, however, are better by £1 or more on the week, although the advance seems to be of the automatic kind rather than the product of investment. Gas securities, too, have been firm, without much further change, except in Imperial Continental, up 3, and South Metropolitan, which closed 2 higher. Amongst Insurance, British and Foreign Marine shares have been sold as low as 20½, a decline of 1½, but Royal Exchange have been marked up 5, and the other changes, all fractions, are usually favourable. Some amount of gambling, much more American than English, has gone on in United States Steel common shares, and all the company's issues quoted here have been bounced up in price, on the strength, perhaps, of a 10 per cent. reduction in the wages of certain classes of its *employés*. Home Iron, Coal, and Steel securities have rarely moved, because let alone. Amongst Shipping, Royal Mail shares are up to 45½, "Shell" Transport are rather firmer, and nothing has relapsed to any extent. Tea and Rubber shares are also steady enough on the whole, and now and then better, but amongst Telegraph shares, Anglo-American deferred has plunged on realisations, and no particular advance has occurred anywhere else, although Marconi's shares are rather better at 14s. 6d. The remainder of the list offers nothing at all to notice.

FRIDAY EVENING'S NEWS.

Yesterday's mood was again prevalent in markets, and prices receded in nearly all departments. The maintenance of the Tilbury dividend, the first to be announced, had no noticeable effect on Home Railway stocks, and Americans came weak this afternoon from New York in sympathy with last night's prices there. Efforts at a rally were felt this evening, but it did not go far in business hours. In the Foreign section Japanese bonds were knocked down by the erroneous unofficial figures about the Budget. A correction has been published giving totals of some £40,000,000 on each side below the original statement, but the market did not stiffen much, because the "bears" have now a Chino-Japanese scare to hang by. Grand Trunk stocks tumbled on a traffic return showing a decrease of £28,123, and Canadian Pacific shares were also depressed now that they get no support from the "rights." The Kaffir market was oddly enough about the hardest of the bunch, but that is not saying very much, and altogether a 5 per cent. Bank rate has not yet put any gilt on things.

WATERWORKS.—Rise Tarapaca ⅛, to 10-10½. **Fall.** Alexandria ⅛, to 10-11.

The *Times* Wellington correspondent says the value of New Zealand exports for 1907 was 20 millions sterling, which is a record. The value of the imports was 17 millions sterling. The population, at the present rate of increase, will reach a million this year. This prosperity should mean a new loan soon.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

Lloyds Bank.

In 1907 this bank, which is the largest of all our joint-stock banks, made a nett profit of £1,097,804, after meeting all charges and adding £4,500 to the provident and insurance fund, besides making full provision for rebate, bad debts and contingencies. The balance brought forward from 1906 was also £8,547 larger, so that altogether there was £207,951 more available for distribution, and the directors promptly utilised £200,000 of this to write down the value of the bank's investments. Also £50,000 is again added to the reserve fund, bringing it up to the round £3,000,000, and £35,000 is written off bank premises account. In spite, however, of the last-mentioned reduction, bank premises at £1,728,806 show an increase of £33,584 on the previous year, so that altogether £68,584 must have been spent in this direction last year. No increase is made in the dividend, which is again at the rate of 18¾ per cent. for the second half of the year, making with the 17½ per cent. rate paid as interim dividend six months ago 18⅛ per cent. for the year. After making all these adjustments, the balance left to carry forward is again up by £8,592 to £76,188. The balance-sheet shows a liability on deposits, &c., of £64,608,014, being an increase of £1,020,082, and among the assets, cash in hand is up £898,288 at £11,870,264, but money lent at call and short notice is again down, but only by £77,532 to a total of £3,931,317. There is also a decrease of £872,212 in the bills of exchange held whose total is now £6,644,356. A decrease of £1,254,429 is also shown in the investments held, the total of which is now £10,794,102. Of this decrease £1,020,050 occurs in Consols and other British Government securities held, the aggregate value of which is now £5,926,744. A year ago the balance-sheet mentioned that Consols were taken into the accounts at the price of 95, but this intimation is not now made. The large sum, however, devoted to writing down investments no doubt fully covers depreciation in this and other directions. Indian and Colonial Government securities, Corporation stocks, English Railway debenture and preference stocks and other investments show a decrease of £234,379 at £4,867,358. There is also a decline of £623,269 in the cross entry, bills accepted or endorsed, whose total is now £4,235,397, but advances to customers and other securities have swelled out by £2,350,974 to a total of £36,928,043. This is exclusive of £141,500 representing liabilities in respect of customers' loans to brokers fully secured and not taken into the balance-sheet. The aggregate of the balance-sheet, including bank premises as above, is now £76,132,287.

Union of London and Smiths Bank, Limited.

Gross profits of this bank for the six months ended December 31 increased by £11,379 to £82,787, but the whole of this improvement and more was absorbed by higher outgoings. Salaries, contribution to pension fund and other expenses were £12,409 heavier at £219,389, interest to customers took an additional £3,872 at £306,020, and £38,646 or £2,788 more was reserved for rebate on bills not due. Nett profits therefore came to £7,690 less at £263,806, and as the balance brought in was £39,179 smaller at £145,378, it follows that the disposable total was only £409,185 compared with £456,054 a year ago. The usual dividends and bonus aggregating about 11 per cent. per annum, however, are distributed, and another £50,000 is employed to write down the investments to market price or under, leaving £164,245 or £46,870 less to be carried forward. Liabilities on current and deposit accounts amount to £35,871,222, or a decrease of £1,714,262, of which £895,244 is in current accounts at £23,183,756, but acceptances have risen by £1,537,667 to £4,234,155. On the other hand, cash in hand is £106,502 up at £3,297,502, and the balances at the Bank of England are £153,957 higher at £2,954,957, but there is a substantial reduction of £2,360,531 to £6,327,599 in money at call and short notice, and bills discounted are also £325,308 down at £4,988,950. Loans and advances, however, come to £894,214 more at £16,472,414. Investments, including £1,150,000 in Consols and other Government funds on account of the reserve, show a decrease of £281,050 at £5,988,950, and with an increase of £71,109 to £1,377,132 in bank premises and the larger contra accounts for acceptances, &c., the total of the balance-sheet comes to £45,818,867 against £46,019,984.

Parr's Bank.

Business was just steady for this bank in the December half-year. The gross profits indeed were £1,596 down compared with the December half of 1906 at £418,456, but £28,379 more was brought forward than a year ago at £148,163, so that the entire free profit, this included, was £367,614. Out of this the directors pay the customary dividend at the rate of 19 per cent. per annum, together with the usual 1 per cent. bonus, all tax free, and absorbing £179,392. Then £15,000 is transferred to bank premises account or £5,000 more than a year ago, but the same as six months ago, and the same amount to officers' pension and provident fund, leaving £158,221 or £10,057 more to be carried forward. The balance-sheet shows an increase of £496,554 in the liabilities on deposit, current and other accounts, the total of which is now £29,278,395. Drafts current, customers' acceptances advised, &c., have also gone up by £91,622 to £345,946, but there is a small decrease of £289 in the Isle of Man note circulation, now only £7,906. Acceptances on behalf of customers have risen £59,737 to £4,282,031, but there is a decline of £5,571 in the foreign bills negotiated now entered at £47,765. The most remarkable change in the assets is an increase of £1,993,069 in the money lent at call and short notice, the total of which is £7,095,122. Cash, on the other hand, has declined £244,921 to £4,754,411. The £1,000,000 in Consols is now written into the balance-sheet at 83 or £20,000 less than a year ago, which means £830,000, as against £850,000. Other investments in British Government securities, British Railway debenture, and other first-class stocks, including £240,000 of British securities lodged for public accounts and the Isle of Man note circulation, have fallen off £14,444 to £2,616,261, and there is a decline of £361,188 in bills discounted, the total of which is now £2,557,887. Notwithstanding this reduction, £2,088 more than twelve months back is allowed for rebate on bills not due at £24,176, but rebate is now taken at 7 per cent., as against 6 per cent. then. Loans and advances to customers, after deducting provision for bad and doubtful debts, have fallen off £748,778 to £14,727,272, so that had it not been for the extraordinary increase in the short loans granted to the market, an increase would doubtless have swelled out deposits on the other side of the balance-sheet, the total of £37,746,658 now exhibited by that balance-sheet could hardly have shown an increase. As it is, the increase on a year back is £667,593.

London Joint Stock Bank.

After providing for rebate, which took £33,783 or £6,664 more than at the corresponding date a year ago, the nett profit for the six months was £135,950, out of which the regular dividend at the rate of 11 per cent. per annum was declared and £5,000 each added to the reduction of premises account and the superannuation fund. This leaves £26,950 to carry forward or £1,245 more than was brought in. Gross profits, including the balance brought forward, were £285,499 or a decrease of £4,834 compared with a year ago, but then the profits of that half-year were nearly £29,000 more than in the second half of 1905. Still the profits of the bank are not progressive, and the board does well never to increase the dividend. Working expenses increased by £3,394 to £115,765. Nothing is this time added to reserve, while a year ago £15,000 was thus set aside. In spite of the £10,000 per annum applied in reduction of the cost of premises, their book value of £444,440 is £8,660 more than it was twelve months ago, so that the expenditure on the offices of the bank must have been heavy during the past year. The balance-sheet shows a decline of £1,518,858 in the liabilities on current and deposit accounts, circular notes, &c., but no particular inference is to be drawn from this because that item in the accounts of the Joint Stock Bank fluctuates more arbitrarily than any similar entry in the balance-sheets of other great banks. Acceptances, on the other hand, show an increased liability of £982,346 at £2,653,629. In the assets the cash in hand and at the Bank of England shows a diminution of £225,713 at £2,646,866, and the total balance-sheet value of the securities held by the bank is £3,416,853, showing a decrease of £106,706. Of this total £2,349,166 is in securities of, or guaranteed by, the British Government, of which £20,000 is lodged with public bodies. A year ago the bank's possessions in this kind were set out much more fully than now, and we should like to have some explanation of the heaping-up system now adopted. A year ago Consols, taken at 85, were entered for £1,275,000, other British Government securities for £1,263,711, and Indian, Colonial and other securities for £1,001,335. At that date also rather less than £17,000 of stock was lodged with public bodies against £20,000 now. What is the bank's present holding of Consols, and at what figure is the stock entered in the balance-sheet? A large decrease of £2,036,907 is shown in the money lent at call and short notice, which is now down to £3,617,405, and that decline no doubt chiefly accounts for the reduction in the liabilities of the bank on deposit and current accounts. Against this, however, we have an increase of £786,955 in the much-mixed-up item "bills discounted, loans and other securities," the total of which is now £10,161,289, but even this and the decline in the deposits together seem to fall short of accounting for the remarkable decline within twelve months in the floating credits of the bank lent upon the market. At the end of 1906 money at call and short notice was down £224,000 compared with the year before, and in June last the reduction was about a further £1,500,000, so that the decline has been continuous for at least three half-years. It may be a prudent measure to curtail the bank's commitments in this direction, but we should judge that the diminished facilities for business in the Kaffir market had a good deal to do with it; for this bank is perhaps more deeply engaged in that quarter than any other of our large banks. The aggregate of the balance-sheet is now £22,940,483, and a year ago it was £23,465,223.

London and South-Western Bank.

Gross profit for the December half-year was £344,884, an increase of £23,082 on the gains for the second six months of 1906. Less was brought forward by £18,951 a year ago than now, so that although working expenses increased by £7,042, the nett profit for the half-year, after providing for bad and doubtful debts, and, as we gather from the report, writing down the value of investments to less than their market value, besides adding £3,000, as usual, to the staff benevolent fund, was only £1,035 down at £108,915, while actually the divisible balance of £170,107 was £17,916 higher. The directors have therefore applied £40,000 as provision for depreciation, and write £10,000 off bank premises account, and still are able to pay the regular dividend at the rate of 16 per cent. per annum, with £40,107 left to carry forward. In other words, the reduction in

the balance forward is only £21,085, although £40,000 has been written off investments. Liabilities in the balance-sheet on current and deposit accounts show an increase of £305,482 at £14,635,631, and other liabilities and credit accounts of various kinds are £182,641 up at £279,950. Acceptances are also heavier by £35,890, the total being now, however, only £47,388. The rebate allowed on bills constitutes rather a puzzling entry at £9,196, because it is £1,056 below the allowance of twelve months back, and this notwithstanding the fact that there is a decrease of £80,191 in the amount of three months' bills and under discounted which is now £817,043, whereas bills of more than three months' usance are £93,011 up at £235,207. The apparent anomaly may merely imply that no uniform practice in rebating is followed by the board. Cash in hand and at the Bank of England is £340,911 higher at £2,353,788, and money at call is also up £52,480 at £1,399,200. Consols and securities guaranteed by the British Government, of which £336,000 is lodged for public accounts, show an increase of £57,726 at £1,227,600, but besides these the bank holds £882,353 nominal in Consols taken into the balance-sheet at 85 and £263,158 of Local Loans stock entered at 95, so that the two together figure for £1,000,000. Then it also holds Indian Government and Railway and guaranteed, Metropolitan and English Corporation, Bank of England, and Colonial Government stocks, a remarkable mixture, the total of which is £1,475,452, besides which £357,393 of British Railway stocks and other securities figure as usual. In regard to the Indian and other stocks, there is a decrease of £67,795, but the British Railway and miscellaneous stocks show an increase of £43,895, the sum of the matter being a total of £4,060,445 set against investments, or an increase of £33,826 on the year. Bills discounted are up £12,812 at £1,052,250, but loans and advances are down £263,871 at £7,403,449. A decrease of £12,029 is also shown in the value of freehold and leasehold premises, furniture and fittings, the total being now £541,585, and other assets, including outstanding advices, freehold and leasehold properties, and stamps, &c., show a decline of £64,438 at £244,167. The total of the balance-sheet, notwithstanding the increase in the liability on deposits and acceptances, is only £135,597 up at £17,102,273.

Williams Deacon's Bank.

The year's profits of this large London and Manchester bank, formerly known as the Manchester and Salford, show an increase of £68,638 at £383,474, and £2,903 more was brought in at £13,504, so that although expenses went up by £23,940 there was really £47,601 more to divide at £225,504. Out of this the directors set aside £25,000 to reserve, or £5,000 more than a year ago, and again assign £5,000 to building depreciation, while paying the same dividend of 15 per cent. for the year, and still have £5,101 more left to carry forward at £18,605. To provide for the depreciation that has taken place during the past year in the value of Government and other high-class securities, the board has transferred £100,000 to the reserve fund, writing down the bank's holding of Consols to 83, and its other investments below present market prices, but, on the other hand, the absorption of the Sheffield and Rotherham Bank has brought in its reserve fund of £155,000, and this together with the £25,000 drawn from the past year's profits has so strengthened it that in spite of the withdrawal to write down securities the reserve is actually £80.000 up on the twelve months, and now stands at £750,000. Because of the inclusion of the Sheffield Bank figures the balance-sheet shows unusual changes. The liability on deposits, for instance, has risen by £2,860,000 to £14,601,143, and the bank also has a liability on acceptances and credits opened on behalf of customers amounting to £864,178, besides £46,816 on foreign bills negotiated. No less than £34,466 has been allowed for rebate on bills not due. Cash in hand and at the Bank of England shows an increase of £486,339 at £2,120,084, but call and short notice money is down £162,726 to £1,908,094. The holding of Consols shows an increase of £32,027 at £976,471, notwithstanding the fact that the price is now written down to 83, but other securities are 361,289 up at £1,916,253. Bills of exchange also show an increase of £1,145,583 at £3,389,031, while advances on current accounts and loans on security are £1,325,389 higher at £6,926,193. Bank premises are entered at £413,297 nett, that is after taking off the depreciation fund of £127,000, and this shows an increase of £37,394 on the previous year's figures. The total of the balance-sheet is now £17,660,417 or £3,408,682 more than it was at the end of 1906, thanks to the addition of the Sheffield bank's figures. In their report the directors pay a well deserved and graceful tribute to Mr. Francis Kemp, the late deputy-chairman, who, under medical advice, has been compelled, as was intimated some time ago, to resign his seat on the board, a seat he has occupied for the past eleven years. His connection with the bank covers nearly half a century, and he has been identified for many years with its management. Mr. George Henry Gaddum has been appointed deputy-chairman in his place.

United Counties Bank.

This was formerly known as the Birmingham District and Counties Banking Co., Limited, and the present name was adopted after the absorption by it of the Bradford Old Bank, the last of a series of similar accretions. Thanks to this addition it is impossible to make any satisfactory comparison with the figures of a year ago except so far as they show, to some extent at least, the benefits obtained by taking in the business of the Bradford Old Bank. In their report the directors state that after deducting current expenses, rebate (not stated), and providing for bad and doubtful debts, the nett profit for the year amounted to £198,283, which is £67,833 more than the profit for 1906. Adding in the balance of £20,074 brought forward, there is altogether £218,357 to be distributed, out of which a dividend of 15 per cent. is paid, half of it, or 6s. per £1 paid share, having been disbursed in August last. On the enlarged paid-up capital of £1,193,332 this takes about £179,000, and out of the remaining £39,357, £10,000 is applied in reduction of cost of premises as against £10,000 placed to reserve a year ago, and the officers' superannuation fund again gets £2,500, so that £26,857 is left to carry forward or £6,783 more than was brought in. Furthermore, the directors have taken £75,000 from the reserve to form an investment reserve account to cover the depreciation in the price of the bank's investments. This leaves the reserve at £925,000, of which £258,750 has come from the assets of the Bradford Old Bank. The absorption of that bank, it may be well to remember, involved the issue of 83,333 new shares of £20, £4 paid, which was equivalent to £333,332 added to the paid-up capital. In the balance-sheet cash in hand, at the Bank of England and with agents is £393,521 up at £1,752,615. Consols and all other Imperial Government stocks figure for £1,019,482, and Colonial and Indian Government bonds, Railway debentures and stocks, &c., stand at £897,645, or a total of £1,917,127. Of the Consols held £80,000 is lodged for public accounts. A year ago the total investments amounted to £1,333,483, but nothing whatever is stated regarding the price at which Government or other securities are entered in the balance-sheet. The largest change in the accounts is an increase of £3,084,406 in the liability on deposit, current and other accounts, which now amounts to £11,191,780. This is a very large addition, most of which appears on the assets side in the increase in loans on security, advances, &c., which is £2,290,883 at a total of £7,850,523. 'Compared with that an increase of £216,416 in the bills of exchange and promissory notes held, the total of which is now £1,289,071, looks comparatively insignificant. Bank premises are entered in the balance-sheet at £445,294, exclusive of freehold properties entered at £55,481, the increase in the value of the bank premises being £106,565, and in the freehold premises owned £10,460. A minute liability on acceptances figures as a cross entry at £22.019, and the aggregate of the balance-sheet is £3,623,507 up at £13,332.131.

Manchester and County Bank.

In the half-year ended December 31 last this company's gross profits were £2,829 up at £151,164, and working expenses rose £1,579 to £58,499, leaving £92,664 as nett revenue, exclusive of £21,377 brought forward. Adding that, the entire free balance amounts to £114,041 or £5,215 more than for the second half of 1906. The directors are therefore easily able to pay the same dividend at the rate of 15 per cent. per annum tax free, and also to add £10,000 to the reserve fund, raising it to £1,010,000, besides placing £6,000 to bank property account, and still have £23,890 left to carry forward against the above-mentioned amount brought in. The changes in the balance-sheet are comparatively unimportant, but the liability of the bank on current, deposit and other accounts has increased by £115,870 to £9,705,471, and there is also an increase of £111,041 in the acceptances of the bank, which now total £1,049,142. Rebate, it may be mentioned, is entered at £26,145, and a year ago when money was dear, but not quite so dear as on December 31 last, the allowance on this head was £26,062, but the bank may not now hold so many bills. In the assets, cash in hand and at call and short notice, all heaped together, amounts to £2,406,277, an increase of £325,489. Bills of exchange are now entered separately at £1,912,240, whereas a year ago they were mixed up with advances and loans on security. Adding these in now, together with £368,269 entered as loans on railway stock and other securities for short periods, we get a mixed total corresponding to that of a year ago of £7,674,093, which is £143,586 less. Investments stand at £1,506,125, and also show a decrease of £48,625, but this is accounted for, to some extent at least, by the reduction of the price at which Consols and 2½ per cent. annuities are entered in the balance-sheet. A year ago it was 85, it is now 82. A year ago also the £140,000 of Irish Land stock held was taken into the balance-sheet at 87, and it is now taken at 83, but both Local Loans and Transvaal Guaranteed stock, of the former of which the bank holds £250,000 and of the latter £50,000, are still taken at 90, as well as the £60,000 of the Terminal National War loan, so the writing down has been thorough and perhaps more than enough, especially on the War loan. Bank premises are £3,000 up at £198,000, and the aggregate of the balance-sheet is £12,833,638, showing an increase of £244,289.

Union Bank of Manchester.

In the half-year ended December 31 last this bank made a gross profit of £82,933 or £2,538 more than in the second half of 1906. Expenses went up only £1,874 to £30,051, and as £4,819 more was brought forward at £10,765, it follows that the nett divisible profit was £5,483 better at £57,047, so the usual dividend of 12s. per £11 paid share was declared, and £5,000 again placed to the reserve fund, £2,000 to the bank premises account, and £2,500 to the pension fund, and still £17,546 remains, out of which £7,500 was taken to write the bank's Consols down from 83⅓ to 82. Even then £10,046 is left to carry to the new half-year or only £2,018 less than was brought in twelve months ago. The liability of the bank on deposits, &c., has risen by £119,245 to £5,035,101. It has also a liability of £11,709 more on acceptances at £479,276. The assets show a jump of £411,223 in cash at £1,127,257, but investments are down £8,011 in book value to £602,224. Bills of

exchange, however, show a still more important decrease of £308,733 at £771,743, and the increase in loans and advances is only £14,441 at £3,099,491. Bank premises are up £18,309 to £276,433, and the total of the balance-sheet is £6,446,423 against £6,307,487 on December 31, 1906.

Messrs. Lambton and Co., Bankers, Newcastle-upon-Tyne.

An increase of £219,142 in the liabilities on current, deposit and other accounts is disclosed in the balance-sheet of this old private bank for the year ended December 31 last, the total being now £4,174,821. Adding in partners' capital, reserve and current accounts, £685,791, we get a total of £4,860,612 representing the entire assets, or an increase of £205,899. It does not appear that the business has been pushed in any way because of this increase in resources. On the contrary, the advances to customers and bills discounted shown amongst the assets are down £343,073 to £1,869,282, and cash in all forms, including £613,265 lent in London at call and short notice, is up £620,145 to £1,281,218. A decrease of £72,347 is shown in the aggregate value of the bank's investments, which is £1,595,187, but this is probably accounted for by writings down, for £545,978 nominal in Consols is taken into the balance-sheet at 83, and £50,000 of Local Loans stock at 95, or a reduction of 2 in each instance on the price of the year before. Freehold premises are entered at £114,925 and bring the total of the balance-sheet up to the figure named.

Nottingham and Nottinghamshire Banking Co., Limited.

This bank's liabilities on deposits and current accounts at December 31 amounted to £3,590,975 or an increase of £272,413, and out of the additional resources thus supplied £47,121 was added to the cash in hand, and with London bankers, brokers, &c., making it £281,275. Advances to customers on securities and current accounts also were £205,070 higher at £2,631,330, bills receivable rose by £15,591 to £153,422 and investments other than Consols were £14,049 up at £756,929. The result of the year's working was an improvement of £1,261 to £43,033 in nett profits and with £2,313 or £372 more brought forward the disposable total was £45,946 compared with £44,313. In view of the abnormal depression in high-class securities the directors transfer £10,000 to a special fund to cover depreciation in the investments against £5,000 put to reserve a year ago, but they balance this by writing £4,000 less at £1,000 off bank premises, and are therefore able to repeat the dividend of 10 per cent. for the year and to raise the sum carried out by £133 to £2,446. In addition to the provision made out of revenue, £15,000 is taken from reserve and put to the special depreciation fund, making £25,000, which with the provision already made is said to more than cover the depreciation in Consols and all other securities. The reserve fund now stands at £140,000 against a paid-up capital of £325,000. These figures do not appear to indicate any very rapid growth of the business, but that is the reason put forward by the directors for their proposal to double the capital by the issue of a further 65,000 shares, which will be presumably of £20 each, £5 paid, like the existing shares.

Halifax Joint Stock Banking Co., Limited.

After allowing another £5,000 to write down Consols to 83 the nett profits of this bank for the year ended December 31 were £1,197 better at £41,207, and with £1,204 more at £7,578 brought in the disposable total was £48,785 against £46,384. Out of this the dividend is repeated at 12½ per cent., and £1,480 or an extra £174 is absorbed by income-tax, after which the directors have decided to apply £8,000 to writing down the other investments to within market values, leaving £1,805 or £5,773 less to be carried forward. Liabilities on deposit and current accounts are up by £61,193 to £3,523,415, and there is also a trifling increase to £6,630 in the note circulation. On the other hand, cash on hand and call and short notice money, given as one item, shows a decrease of £51,985 at £691,159, and bills on hand are £79,098 lower at £454,789, but advances come to £2,454,787 or £165,484 more, and investments are £28,136 higher at £538,799.

Palatine Bank.

Although this undertaking has a nominal capital of £1,000,000, it is quite a modest concern with half that amount subscribed and only £3 10s. per £20 share or £87,500 paid up. Its liabilities on current, deposit and other accounts total no more than £196,175, against which cash comes to £62,202, investments to £21,615 and bills of exchange to £6,309. With £103,533 in advances to customers, loans on securities, &c., £6,626 in bank premises and an entry on both sides of £57,821 for acceptances on account of customers, the aggregate of the balance-sheet is brought up to £348,106. Gross earnings for the year ended December 31 were £10,601, and £1,486 was brought forward, making £12,087 altogether, of which current expenses took £4,976, leaving £7,111 as nett profit. Of this £500 is written off Government duty on capital, £250 off premises account and £600 off investments, and after paying a dividend of 3s. per share £2,011 is carried to the new account.

Bank of Ireland.

In the half-year ended December 31 last this semi-Government institution made a gross profit of £240,481 or £1,933 less than in the corresponding half of 1906. Working expenses swept nearly all this increase away, they having risen £1,155 to £89,586, so that the nett balance, including £19,755 brought forward was £179,650 against £179,994 twelve months ago. This is no hindrance to the distribution of the usual dividend of 5¾ per cent., tax free, for the half-year, being at the rate of 11½ per cent. per annum, which takes £159,231 and leaves £20,419 to be carried forward or £664 more than was brought in. The balance-sheet shows an increase of £121,494 in the liability on notes in circulation, which now totals £2,699,580. Deposit and current account liabilities to the public are also £642,012 greater at £10,717,540, and the liabilities on Government and other public accounts have risen by £200,992 to £2,330,673. Cash, including the balance at the Bank of England, is £251,938 up at £1,492,307. Money lent at call and short notice, which amounts to £738,939 is likewise £187,314 up, but the largest increase is in bills discounted, advances to customers, &c., £9,346,272, an aggregate which shows an increase of £580,171. The total amount of Government securities held is £4,231,454 against £4,228,381 twelve months back. Other investments aggregate £3,809,001 or a decrease of £58,790. Premises have gone up slightly by £2,528 to £112,701, but the original cost was £513,150. The total of the balance-sheet is £19,730,674 or £966,171 up on the year.

National Bank, Limited.

A small relapse of £1,169 to £193,997 in the gross profits for the six months ended December 31 was perhaps no more than might have been expected, and as £1,621 more at £23,781 was brought forward the total income was a trifle to the good at £217,778. On the other hand, however, expenses rose by £861 to £90,351, and, owing to a large discount business having been done, the provision for rebate on bills was £2,482 up at £13,436, so that the nett profits came to only £113,991 against £116,882 a year ago. The dividend at the rate of 10 per cent. and bonus of 1 per cent. are nevertheless repeated, and the directors again put £10,000 to reserve by reducing the sum carried out from £24,382 to £21,491. Liabilities on deposits and current accounts increased by £358,199 to £12,286,994, and the note circulation was £14,520 up at £1,136,950, but acceptances have been reduced by £53,350 to £190,250. Amongst the assets cash balances are £138,742 larger at £1,867,025, but money at call and short notice has dropped by £469,007 at £1,766,122, while an addition of no less than £644,741 at £4,220,809 has been made to the bank's bill case. Advances on securities are £63,680 up at £5,783,339, but investments show very little change, Government securities amounting to £1,514,778 and other investments to £153,254. With reference to the continued drop in the value of Consols and other Government securities the directors express the belief that this is only temporary, and they therefore deem it unnecessary to depreciate further the holding of this class. Apparently, however, the Consols are carried in the books at 85, and as a matter of prudence £50,000 has been taken from reserve and specially earmarked against depreciation, leaving the "rest" at £500,000 against the paid-up capital of £1,500,000.

Provincial Bank of Ireland, Limited.

This bank likewise found its earning power somewhat curtailed during the half-year ended December 31, and in spite of having rather larger resources at its command the gross profits fell off by £5,880 to £93,201. Balance brought forward, too, was slightly less at £13,363, and on the other hand expenses rose by a few hundreds to £50,794, so that the available total was £6,479 smaller at £55,769. As, however, the directors only put £5,000 to reserve and appropriate another £5,000 to write down Consols to 83 compared with £17,500 written off investments a year ago, they are able to maintain the dividend at the regular rate of 12 per cent. per annum and to raise the sum carried out by £1,021 to £13,369. The reserve fund was heavily drawn upon six months ago, and even with the present addition is £30,000 less than at this time last year at £335,000 against a paid-up capital of £540,000. Deposit and current accounts are £167,619 larger at £5,234,564, and the note circulation has risen by £7,799 to £740,639, and most of the additional funds thus provided have been put into bills, which come to £4,092,290 or £225,929 more. Investments also are £45,847 higher at £1,820,360, with the result that cash balances have been reduced by £7,693 to £386,256, and money at call and short notice shows a decrease of £115,000 at £485,000. Bank premises are valued at £112,066 or £2,644 less, and the total of the balance-sheet comes to £6,895,972 compared with £6,749,533.

Munster and Leinster Bank, Limited.

Nett profits for the six months ended December 31 improved by £997 to £21,713, and with a larger balance of £6,267 brought in the amount at the disposal of the directors was £1,273 up at £27,980. Of this extra sum £1,000 is absorbed by the payment of a dividend at the rate of 13 per cent. compared with 12 per cent. a year ago, and as an increase of £500 to £7,500 in the addition to reserve is met by a similar reduction to £1,000 in the sum written off premises account the balance carried forward is raised by £273 to £6,480. Deposit, current, and other accounts are £313,040 higher at £4,966,039, and the whole of this increase has been employed in making loans at call and short notice, which have risen by £369,235 to £1,018,898. Cash on hand and with bankers is £7,773 lower at £416,133 and bills receivable show a decrease of £38,759 at £859,499, while investments are £3,722 up at £1,178,316. These include £744,815 in Consols and other Government securities, and it would be interesting to know whether we are to infer from the silence of directors and auditors on the question of depreciation that due provision has been made. It may be that they do not consider any special provision necessary in view of the fact that the reserve fund now stands at £267,500 against a paid-up capital of £200,000.

Union Bank of Australia, Limited.

The half-year ended August 31 was not so favourable as the corresponding period of 1906, and the profits came to £16,721

less at £293,256, but as the revenue a year ago showed a jump of over £70,000 the set-back is not a very serious one. General expenses, however, were £8,970 heavier at £140,696, and in spite of an increase of £5,155 to £34,310 in the balance brought in the nett profits were £20,536 down at £180,870. By putting £5,000 less at £30,000 to reserve and ignoring the guarantee and provident funds, which a year ago got £20,000, the directors have £4,464 more at their disposal at £150,870. Out of this they write the usual £10,000 off bank premises and property in the colonies, and again pay a bonus of 10s. per share in addition to the 25s. dividend, making 7 per cent. for the six months, leaving £35,870 to be carried forward. Deposits, including inscribed stock deposits, are £977,174 higher at £19,153,423, but bills payable and other liabilities show a decrease of £200,559 at £1,666,605, and there is also a small reduction of £6,181 to £514,431 in the note circulation. On the other hand, specie and cash balances have risen by £17,072 to £4,225,820, but bullion and advances on bullion are £41,251 down at £167,077 and money at call and short notice in London is further reduced by £130,000 to £915,000. Remittances in transit and bills receivable at London office are £136,028 higher at £2,450,434, and bills discounted, loans and other securities have increased by £842,291 to £14,125,971. Although one new branch in New South Wales and two in New Zealand were opened during the half-year, premises and property in the colony are, nevertheless, £23,070 down at £490,280, but the reduction in London leasehold premises less reserve is only £586 at £121,687. The total reserve fund now stands at £1,200,000 of which £1,000,000 is specifically invested in Consols, Local Loans and National War Loan. Other investments have been increased by £48,516 to £679,061, of which £268,700 is in Home Government stocks, £221,572 in Indian Government sterling loans and £188,789 in Colonial Government and Municipal securities.

National Discount Co., Limited.

Although this company's balance-sheet does not run into quite such big figures as that of its principal competitor, the total is one of no small magnitude. The management, too, is equally to be commended for the way in which they have handled the resources at their command during the half-year. Gross profits showed a satisfactory increase of £29,493 at £181,627, but the greater part of this is added to the provision for rebate on bills not due, which is £28,443 up at £124,947. Current expenses took £11,877 or £1,595 less, and as at the same time the sum of £12,751 brought forward was £1,852 larger, the disposable surplus amounted to £57,554 compared with £53,057, and after paying the usual dividend at the rate of 10 per cent. per annum the balance carried out is raised by £4,497 to £15,221. Bills discounted are up by the very substantial amount of £2,257,734 to £14,673,938, of which £3,309,063 or £205,280 less has been rediscounted. Deposits and sundry balances have increased by £1,491,949 to £13,495,948, and in order to provide for the expansion in the bills held, loans at call, short and fixed dates have been reduced by £919,563 to £998,442 and investments are £100,989 down at £2,125,485. Cash balances are £71,369 up at £259,715, and freehold premises are now valued at £126,000 or £15,400 more.

*This report was mauled in the "making up" last week.—ED.

Peel River Land and Mineral Co., Limited.

Once again the annual report of this excellent business is a cause for congratulation. Business flourished exceedingly in the twelve months to June 30 last, and the return to the shareholders exceeds the excellent distributions of the previous year. The wool department again yielded first-rate results. Total number of bales was just a trifle smaller at 3,632, and the prices obtained were 11.64d. per lb. from the Peel River and 9.64d. from the Currawillinghi against 10.67d. and 10.19d. respectively for 1905-6. In any case, the average works out well in favour of the period under review, but the actual gain is substantial because by far the greater proportion of the wool comes from the Peel River. The clip from that station yielded £59,623, and from the other one £17,890. Recent telegraphic advices from the Peel give the welcome news that the rainfall on the property has been good, and it may be considered that another good pastoral season is probable, but the crops would have derived more benefit if the rain had fallen sooner. Some anxiety was felt at the Currawillinghi owing to dry weather, and as a precautionary measure 20,000 acres of adjoining land were rented for six months. But rain fell during December, and it is hoped that a good supply of feed and water is now available. Total income from the stock department was £104,764, from the land department £11,103 and from the goldfields department £43, while £6,188 came in from interest, making £122,099. Expenditure under all heads was £34,450, leaving £87,640 as nett profit, and to it is added £1,947 brought forward, increasing the available sum to £89,595. Income-tax absorbs £1,534, and in addition to two dividends of 4 per cent. each the directors declare a bonus of 3 per cent. or 11 per cent. in all against 10 per cent. Reserve is again credited with £10,000 and improvements account gets £2,000 or £15,000 less, but the carry forward is over £8,000 larger at £10,061. A good deal has already been said about the proposed purchase by the New South Wales Government of a portion of the Peel River Estate, and the directors now announce that an official survey on behalf of the Government was commenced during May and was completed in September, the matter being referred to the Closer Settlement Board in October to ascertain the market value of the land and improvements by means of an inquiry in open court. Including the company's improvements (but excluding all leased lands and tenants' improvements thereon) the value was put at £3 0s. 6d. per acre, but the company has received no further communication from the Government. Subsequent to the inquiry the "Closer Settlement Amendment Act, 1907," was passed in December, and the Government now have the power to acquire a portion of any property referred under that Act.

E. W. Tarry and Co., Limited.

As the directors of this company pinned their faith to Chinese labour as the panacea for the disorganisation of business in South Africa, so now they are ready to proclaim the virtues of the Gordon drill as a healer of all economic troubles in that country. Signs of improvement, they say, are now apparent, and although these are not so marked in the Transvaal, there is a general feeling that with the new drill the labour difficulty will rapidly be solved, and the confidence which is being gradually restored by the new Government will soon become more pronounced. That is all in the future, however, and meantime the report for the twelve months ended August 31 is somewhat melancholy reading. Owing to the strike of white miners and the stoppage for the time being of all construction works on the various gold mines, the company's works were not fully occupied on contract work, and although the branches outside the Transvaal made satisfactory progress, the gross profits fell off by no less than £10,650 to £57,055. Miscellaneous receipts were a little higher at £4,463, but against this expenses were heavier, and nett profits came out at £12,650 or £11,082 less. Balance brought in too was smaller at £4,331, giving a total of £16,981 compared with £28,332, and in order to pay a dividend on the ordinary shares of 5 per cent. compared with 10 per cent. a year ago the directors take £2,500 from reserve and reduce the sum carried forward by £1,341 to £2,981. A further £5,000 is withdrawn from reserve and transferred to the bad debts reserve in order to meet a loss of £6,104 written off. The directors say they have less hesitation in taking the above £2,500 from reserve, because in past years considerable profits made on the sale of property were applied to reduce the property account and not treated as being available for dividend, but that hardly seems sufficient justification for drawing on a fund already slender enough. Freehold and other properties are valued at £117,376, and plant, machinery, &c., at £22,797, and against these the reserve, including premiums received on 25,000 ordinary shares, now stands at no more than £35,000, and is all in the business. Sundry creditors and bills payable have risen by £21,969 to £82,715, while on the other hand goods account is only £7,848 up at £217,206, book debts and bills receivable are a few hundreds less at £50,568, and cash has dropped by £1,533 to £14,530.

Egyptian Land and General Trust.

The nett result of the 16 months' business done by this company to October 31 last was that no dividend is paid for 1907. The profit appears to be all right since £24,323 remains after paying away £15,000 as interim dividend on December 4, 1906, but in the circumstances the directors consider it prudent to use £9,753 of the balance to write off preliminary expenses and carry the remaining £14,571 forward. They say that the company has come through the recent financial crisis in Egypt better than many might have supposed, and the amount due for unpaid calls at the date of the balance-sheet was only £14,230. This would seem to indicate that the company's investments have been wisely selected, and that the sales of land effected were to people of solidity. For all that, the board has thought it wise to go outside Egypt with some of the company's money, and has invested in bonds issued by a company working concessions in Mexico. If these concessions are valuable, they must have made a good selection, since it yields them about 7½ per cent. The balance-sheet shows that sundry creditors have claims amounting to £142,141 against the company, of which £62,118 represents bankers' overdrafts and £77,329 the balance of purchase money secured by vendors' lien. That is to say, this amount of property does not yet really belong to the company. Debtors, however, owe it £97,125, including £78,899 representing the unpaid balance of purchase money for land sold. Other investments, exclusive of land in Egypt and the Soudan, which cost £137,993, are not specified, but are entered at cost, said cost being £106,768. Part of this asset, however, is lodged with the bankers as security for the overdraft. There is a contingent liability, subject to dispute, not included in the balance-sheet, which may amount to £30,898.

Commercial, Industrial and Land Company of Egypt.

This concern is only in its infancy, and the balance-sheet made up to June 30 last has only now made its appearance. It is not exactly an attractive document, but the directors and managers seem to have surmounted the financial crisis in Egypt better than might have been expected. The energies of the management are now directed to the consolidation and development of the business of R. Kuster and Co., the profits from which from the date of incorporation, April 12, 1906, to the date of the balance-sheet came to only £524; but the company made £14,975 entered as "profit accrued on exercise of option on, and resale of, land at Boulac," and also received about £217 for interest and transfer fees, so that the entire revenue was £15,716, and after deducting all expenses incurred since the formation of the company, paying directors' fees and charges of every description, which came to £8,256, £7,460 remains to be carried forward. It is stated in the report that certain of the shareholders in Egypt have failed to pay calls on the shares allotted to them, and a material number of these shares has been forfeited. Other shares will involve the same fate

on more of the subscribed capital. Altogether the forfeited shares amount to £58,724, and there are calls in arrear on others to the amount of £8,804, so that the total effective paid-up capital is only £90,173, exclusive of the 5,000 £1 deferred shares. Even adding in these there is only £95,173 against a nominal capital of £300,000, but £10,390 paid up on forfeited shares has also been secured. The floating debt of the company therefore stands at £86,876, of which £26,335 is due on bills payable, £38,143 on open account, £8,803 for cash advances, and £13,595 for advances from bankers. Sundry debtors, however, less reserve for bad debts, owe the company £71,079, and stock on hand and work in progress or completed, but not delivered, are entered at £76,599. Sundry other items are set out, less depreciation, not stated, and the goodwill of the Kuster business appears for £4,536. Then £15,000 is entered as preliminary expenses and payment to vendors for the purchase of their rights, while another £15,193 has been paid under contracts, and includes £14,000 disbursed for brokerage, commission, law charges, and stamp duty on transfer.

Assets Realisation Company.

It struggles along serenely, all things considered, but cannot be said to show marked prosperity for the year ended December 31 last. The nett profit is brought out at £23,912, including £756 brought forward, and this is an increase of £233, so the directors are able to continue the 6 per cent. dividend on the ordinary shares after meeting all prior charges, but there is only £162 left to carry forward, and the depreciation on securities held has increased during the year by £6,000 to £34,000, but the directors do nothing because still of opinion that the depreciation is not permanent. The reserve, however, which amounts to £71,000 continues to stand in the balance-sheet, so that it may perhaps be regarded as cover for the depreciation. The profit and loss account shows that assets realised, advances repaid and interest and dividends received amounted last year to £102,605 against £66,819 the year before, but this increase was practically absorbed by the larger amount of assets purchased and advances made, which was £60,784, against £30,101, leaving the balance of gross profit carried down at £29,500. We do not profess to understand the mystery of this kind of bookkeeping, for it seems to indicate that profit is a matter of directorial fiat rather than of ordinary gain in business. What would have happened if the assets purchased and advances made had equalled the amount obtained on realisations and interest, &c. The business seems to be conducted with considerable economy, and directors got £112 less last year at £2,400. There was also a reduction of £100 in salaries, rents, &c., which make another £2,400.

Louise and Co., Limited.

During the year ended December 14 this company added a branch at Ostend to its establishments which, the directors say, has worked satisfactorily. Business all round appears to have been better, as trading profits improved, by £2,132 to £18,483, and with an increase to £146 in receipts from interest and transfer fees, the total income was £2,228 up at £18,629. Outgoings, including £1,862 for depreciation on leaseholds, and £341 written off furniture and fittings, were slightly reduced, leaving the surplus at £15,067 compared with £12,673. Of this, £6,469 is absorbed by the payment of the dividends on the first preference and 5½ per cent. cumulative preference shares, and £6,650 representing 7 per cent., goes to the ordinary shares account. This leaves £1,949 to be dealt with, of which £195 or 10 per cent. is put to reserve in accordance with the articles of association, and the remainder is divided equally between the ordinary and founders' shares. Adding £7,490 brought in, the balance at the credit of ordinary shares amounts to £15,017, and the directors therefore consider they are justified in declaring a dividend of 7½ per cent., which will leave £7,892 to be carried forward, while out of the £877 at the disposal of the founders' shares a distribution of 5s. per share is announced, with £127 over. The Ostend branch does not appear to have been a costly one to establish as the capital account for leaseholds on the Continent has only been increased by £120, and furniture, &c., is £554 up. Additional furniture in London cost £138, bringing the total outlay on property up to £202,853, on which the allowance for depreciation stands at £20,219, leaving the book value of these assets at £182,634, or a nett reduction of £1,895 on the year. The reserve fund is still insignificant at £423, and the transfer of £195 is so inadequate as to amount to a mockery. If the directors had given a thought to the future they would perhaps have hesitated about declaring such a dividend as 7½ per cent. on the ordinary shares before doing something to strengthen this fund in a material fashion. One-third of the outstanding balance of purchase money due to M. Lewis Cassou was paid off during the year leaving £2,000 still to be wiped out, but sundry creditors have gone up by £3,162 to £14,721. On the other hand, debtors owe £5,221 higher at £40,023 and stocks have risen by £3,206 to £10,871, while cash has dropped from £10,034 to £9,108.

Finlay, Muir Tea Companies.

The interim reports issued by the Finlay, Muir group of tea companies appear to indicate that expenses will again have to be cut down if the shareholders are to benefit much. The Consolidated Tea and Lands Company, which is the leading one of the group, shows a decrease of 594,706 lbs. in the crop harvested, but an increase of 143,769 cocoanuts and of 2,311 lbs. in the rubber. The price obtained for the tea, however, has been rather better—viz., 7.62d. per lb. as against an average of 7.21d. for the previous season's crop. Much the same display is made by the Amalgamated Tea Estates Company only that its crop of 3,852,000 lbs. is 170,118 higher. It has also harvested 7,250 lbs. more rubber and about 59,000 more cocoanuts. Here, however, the price for the tea sold has been lower at 9.10d. per lb. compared with an average of 9.59d. for the previous season. The Kanan Devan Hills Company has also an increase of 727,000 lbs. in its crop, which amounts to 7,007,000 lbs., and has gathered 763 cwt. more coffee beans at 1,863 cwt., while the weight of cinchona harvested has decreased by 98,567 lbs. to 117,000 lbs. The price obtained for the tea, however, has been better at 7.75d. against 7.32d., the average for the previous season. In the case of the Anglo-American Direct Company the tea crop harvested has been less by 42,285 lbs. at 5,150,000 lbs., but rubber has given at 24,035 lbs. 16,060 lbs. more, and cocoa has given 1,392 cwt. more at 2,545, but there is a decline of 7,073 cwt. in the coffee crop, which was only 2,297 lbs., and the crop of cardamoms is 10,328 lbs. less at 49,872 lbs. A marked improvement, however, has occurred in the price obtained for the tea sold, which has been 7.61d. against an average of 6.91d. for the previous season.

Edinburgh and District Tramways Co., Limited.

The expansion in this company's traffic for the year ended December 31 was only about half that of the previous twelve months, but the progress made was nevertheless excellent. Passengers carried numbered 57,561,462 or 1,019,514 more, and the resulting increase to traffic receipts was £2,599 at £263,563, and as other receipts yielded £269 more the total revenue came to £264,872 compared with £262,004. A big reduction of £6,292 to £137,558 was effected in working expenses and general charges, but most of this saving disappeared in larger payments to the corporation for rents, &c., leaving expenses only £777 down at £237,083. Nett profits were consequently £3,645 up at £27,789, and after providing for debenture interest the disposable surplus was £24,961 against £21,292. Advantage is taken of this improvement to clear off all arrears on capital redemption account by transferring £8,493 or four years' instalments, and to pay 3½ years' dividend on the preferred shares against two years, leaving only six months outstanding. Then £1,829 is applied to clearing off the debit on suspense expenditure account, including £931 for loss on horse-car plant on withdrawal of Colinton Road cars during the year, and £201 is carried forward. Capital expenditure for the year was £2,153, making a total of £146,534, against which the redemption fund now stands at £36,784, and there is also a special reserve of £3,442, represented for the most part by investments and temporary deposits with the corporation. Sundry creditors are £6,258 higher at £38,739, but stores in hand, including unexpired value of cables, come to £35,823 or £2,719 more, sundry debtors owe £6,517, and cash is £2,718 up at £8,166.

Geneva Tramways Co. (1906), Limited.

The original company of this name having found itself unable to meet the full 4½ per cent. interest on its debenture debt of £850,000, it went into liquidation on October 4, 1906, and the present undertaking was registered under a scheme of arrangement sanctioned by the Court on November 10, 1906. Under that scheme the 4½ per cent. debenture-holders were entitled to 510,000 fully-paid £1 shares and £255,000 4 per cent. debentures, to be distributed *pro rata* in lieu of their holdings, and the third debenture-holders received in lieu of their holding and accrued interest a *pro rata* distribution of 30,000 fully-paid £1 shares, while the rights of the shareholders and income certificate-holders in the old company were extinguished. Up to September 30 applications for 4 per cent. debentures and shares had been received in respect of £811,200 4½ per cent. debentures of the old company, and since the closing of the accounts further debentures have been surrendered, the total now being £843,700, in respect of which £253,110 4 per cent. debentures and 506,220 shares have been allotted. On September 30 the company had an issued share capital of £516,720, and a debenture debt of £243,360, while £34,920 was owing to the liquidator of the old company for unissued shares and debentures, and its other liabilities consisted of £9,690 for accrued debenture interest and £580 due to sundry creditors. On the assets side the purchase price under the agreement appears at £787,149, in addition to which the company had £9,664 out on loan and £6,140 in cash. The company derives most of its revenue from shares held in a Swiss undertaking, and from the details given of its working we find that the gross income for 1906 was 59,107 fcs. larger than in the previous year at 2,287,245 fcs. Expenses increased by 41,676 fcs. to 1,757,681 fcs., the proportion to receipts being a trifle less at 76.84 per cent., and nett revenue came to 529,564 fcs. or 17,431 fcs. more. Miscellaneous receipts brought the total up to 562,148 fcs., to which was added 227,652 fcs. brought in, and after making provision for amortisation, renewal and reserve funds, a balance of 610,468 fcs. was left, out of which a dividend of 1½ per cent. has been paid, and 310,468 fcs. is carried forward. This company's share of the dividend was 299,940 fcs., and produced £11,914, while interest and transfer fees gave another £315 making £12,229 in all, but debenture interest to September 30 required £10,200 and directors' fees and general expenses took £959, and as the directors write off the preliminary expenses amounting to £3,383, a debit balance of £2,313 is left to be carried forward.

South Behar Railway Co., Limited.

This company's reports and accounts are of very little interest nowadays, as its revenue is almost entirely derived from the fixed rent of £30,000 per annum paid for the line by the Secretary of State for India. During the first six months of 1907 £101 came in from interest on deposits and transfer fees and £5,926 was brought forward, making a total of £21,027. Of this revenue expenditure took £637 and debenture interest £5,075, and after

paying an interim dividend at the rate of 5 per cent. £5,825 was left. Adding the half-year's rent of £15,000 and £155 from sundry receipts, and deducting the revenue expenditure of £581 and debenture interest £5,075, the directors had £15,324 in hand, out of which a final dividend at the same rate is paid, giving 5 per cent. for the year, and £5,834 is carried to the new account.

METROPOLITAN TRUST CO., LIMITED.

This company increased its capital in May last to £600,000 by an issue of 30,000 £10 cumulative preferred shares, the whole of which have been paid up. In addition there are a debenture debt of £300,000, a reserve of £150,000 and temporary loans of £78,000, making the available resources £1,128,000. With the fresh capital at their disposal the directors have added considerably to their investments, and these now total £1,150,533 or £354,262 more, after making the adjustment noted below. Of this amount £693,795 is represented by bonds, debentures or debenture stocks, being an increase of £120,589 compared with a year ago, while preference shares or stocks are £132,516 up at £282,625 and ordinary shares or stocks are £101,157 higher at £174,113. A profit of £24,058 made on sales of securities, less £8,818 for expenses of the new issue, was applied in reduction of the cost of the securities before this total was arrived at, and the directors report that a valuation made on January 1 showed that the capital and reserve were intact. This is not so good a display as that made last year, when the value was £92,733 in excess of the capital and reserve, but considering the way in which all securities have tumbled in the interval, it is quite as good as could be expected. Coming to the results for the twelve months ended January 1, we find the income was £7,678 larger at £49,165, and after providing for management charges, debenture and other interest, &c., the nett profits were £7,104 up at £32,223. Adding £2,790 brought in the disposable balance was £35,013 compared with £27,783, and out of this the dividend on the ordinary stock is again increased by ½ per cent. to 8 per cent., so that the new capital has already proved remunerative. Nothing is put to reserve this time against £3,618 a year ago, but, on the other hand, the sum carried forward is raised by £3,078 to £5,868.

OMNIUM INVESTMENT CO., LIMITED.

This company's revenue from investments, commissions, and transfer fees for the year ended December 31 showed a further increase of £1,748 at £33,724, and with £654 more at £4,192 brought forward the total income was £2,702 up at £37,916. An increase of £299 to £1,585 in general expenses was more than off-set by a reduction of £365 to £9,640 in debenture interest, and even after putting an extra £1,000 at £4,000 to depreciation account the disposable balance came to £21,691 against £20,223. The directors take advantage of this to increase the dividend on the deferred stock by another ½ per cent. to 3 per cent., carrying forward £4,592 or £400 more, but in doing so we think they have not acted altogether wisely. Against the £4,000 transferred to depreciation account £3,615 has been written off for losses on sales and other losses on capital account, so that the nett addition to the fund is only £385, making a total of £15,231, and the actual depreciation on the securities at their book values still exceeds this provision. With a paid-up share and debenture capital of £700,000 the investments have been increased by £31,664 to £734,989, and in addition the company has lent £20,081 on the security of stocks and shares. This means that sundry creditors are fairly large at £35,231, but against these there are other assets consisting of £2,775 due for stocks sold, £4,525 for interest and dividends accrued, and £5,721 in cash.

JOHN CROSSLEY AND SONS, LIMITED.

This company's statement of accounts is made up to December 7, and in the twelve months then ended the nett profit earned amounted to £46,615 or £6,284 more than in the preceding year, a very good advance. With £1,305 brought in the sum for disposal is £47,921, and after providing the preference dividend the directors make distributions totalling 2s. 9d. per share or almost 7 per cent. upon the ordinary shares, leaving the enhanced credit of £1,887 to come into the current year. For the previous year the ordinary dividend was only 5 per cent., and in order to pay this it became necessary to take £1,500 from the No. 2 reserve fund. It might have been good policy to return this sum before putting up the dividend to nearly 7 per cent. as now recommended. As we have had occasion to remark before, no outsider knows anything of the actual financial position, as although a balance-sheet is issued it is quite useless as a guide to the situation. There is just one item on the credit side representing the company's entire possessions, and consisting of freeholds, plant, stock-in-trade, book debts, minerals, &c., the whole valued at £1,265,499 or £12,794 less than a year ago. The floating liabilities are pretty heavy at £122,500, but the company is the fortunate possessor of reserves aggregating £263,500.

TAYLOR AND SANDERSON STEAM SHIPPING CO., LIMITED.

Labour troubles and heavy sailing expenses seriously affected the earnings of this Sunderland Company during the twelve months ended October 12, and the company also suffered through the loss of the *Thornhill* and the stranding of another vessel. Gross receipts from all sources were £164,271, but outgoings, including £27,181 for insurance took £157,131 leaving no more than £7,140 as nett profits. Adding £7,323 brought forward, £3,802 on account of the *Thornhill* and £1 from transfer fees, the amount available was £182,266, of which management commissions took £535, and after writing £544 off the holding of Consols and meeting sundry charges £16,965 was left. Out of this a dividend of 2½ per cent. is paid, £2,000 is put to depreciation account and £2,000 to reserve and renewals account leaving £7,252 to be carried forward. The company's position seems good, as after deducting £27,520 for book value of the lost steamer the book value of the fleet of ten vessels stands at £228,457 representing about £5 2s. 9d. per ton, while the reserve and renewals account less £3,397 charged for repairs amounts to £7,001, the depreciation fund to £17,000 and the underwriting account to £3,889. Sundry creditors and bills payable total £8,250, but, on the other hand, £8,736 is due from underwriters and £1,591 from sundry debtors, and in addition to £20,625 in Consols at their market value on October 12 £22,161 is held in cash.

TEXAS LAND AND CATTLE CO., LIMITED.

This company has never done much in the way of making a return on its ordinary capital since its inception in 1881, but it has been fortunate in its closing days, and the shareholders will probably be satisfied to come out of it so well. A year ago the directors announced that the remaining lands, amounting to 188,441 acres, were sold for £168,632, of which £54,278 was paid in 1906, and the balance, except £5,800, was to be paid in four annual instalments with interest at 4 per cent. per annum. The purchaser, however, decided to pay in full on October 27 last when the first instalment note matured, and the money was remitted home at a profitable rate of exchange. With regard to the herd the company was equally fortunate. Mrs. King did not wish to take over the herd with the land, and it was arranged that the company should have a lease of the ranch for at least a year to enable it to dispose of the cattle. This was carried out within the twelve months, so that only one year's rent had to be paid, and the transaction was so favourable that the sum realised exceeded the book value of £48,979 by £8,471. Including the balance brought forward and interest on temporary investments, the income for the year ended December 31 was £12,181, of which expenses took £6,021 and rent of ranch £3,059, leaving £3,101 to be dealt with. Out of this a dividend of 1s. per share is paid and £701 is carried forward, subject to directors' remuneration and income-tax. The remuneration to the manager and other officials for special services in connection with the sale has been charged to reserve along with the other expenses. On December 31, 1906, the capital consisted of 48,000 shares of £4 10s. each or £216,000, but a repayment of 30s. per share was made in February, leaving £144,000 still to be dealt with. The total cash invested at short notice and in bank is £159,540, while sundry debtors owe £3,261, and after deducting the above dividend there is a surplus of £16,401, subject to claims and expenses. It is, therefore, proposed that the company should go into voluntary liquidation, when the liquidator would be in a position to repay the remaining £3 per share, leaving the balance to be distributed after settlement of any claims.

RELIANCE MARINE INSURANCE CO., LIMITED.

A balance of £65,987 was brought forward on account of the 1906 underwriting account, out of which £49,913 was paid away in claims during the year ended December 31 and £648 went for income-tax, and the account was closed by transferring £9,500 to suspense account. This left a profit of £5,926, to which were added £39,643 brought in and £9,178 for interest received, making a total of £54,747 or £2,604 more than a year ago. The directors, however, have decided to write off £5,000 for depreciation of securities held, so that after paying the customary dividend of 12½ per cent. the sum carried out is reduced by £2,396 to £37,248. During the past twelve months the risks accepted reached a total of £45,699,584 or an increase of £1,275,396, but of this £1,302,068 more at £43,492,487 or 95.17 per cent. against 94.97 per cent. has terminated or been reinsured, leaving £2,207,097 outstanding on which the unearned premiums were £21,763. The nett premium income was a few hundreds down at £115,054, and, on the other hand, claims settled rose by £2,580 to £38,418, and after paying expenses the balance carried forward was £3,320 smaller at £62,667. Investments stand in the balance-sheet at £283,785 or a decrease of £7,414, while on the securities other than bonds repayable at fixed dates, amounting to £100,415, there is a depreciation at market values of £10,741. Amounts due for premiums, salvages, &c., come to £1,513 less at £42,968, but cash is £2,778 up at £9,105, and there is £3,089 to come in for interest accrued, while current liabilities are small at £6,271.

COLOMBO COMMERCIAL CO., LIMITED.

This company carries on an engineering and general merchandise business in Ceylon, and apparently also owns certain estates in that island. It seems to have enjoyed a fairly prosperous time during the year ended September 30, as the profits from all sources, after contributing £2,000 to a provident fund which has been created for the European employees, amounted to £23,694. With £1,150 brought forward the total income was £24,844, and after providing for all charges, debenture interest and preference dividend and transferring £2,000 to reserve, the ordinary shares receive a bonus of 2½ per cent. in addition to their usual dividend of 8 per cent., and £2,938 is carried out. The company's paid-up capital was increased during the year by an issue of preference shares and now stands at £99,583, while there is also a debenture debt of £20,800 and a reserve of £15,000. As the property account is valued at no more than £55,000, stores come to £28,698 and investments to £5,469, it may be said that the £20,000 in cash on deposit is really capital for which employment has not yet been found. Liabilities to sundry creditors and on bills payable amount to

£62,651, and £1,000 has been borrowed temporarily, but against these sundry debtors owe £43,846, bills receivable come to £33,333 and there is in addition £11,221 in cash, so that the company has abundant free resources.

W. G.—(1) We think the bridge will be likely to benefit the company, and should not influence the dividends much. As a speculation a further small purchase might be made. (2) This also is rather speculative, but the prospects are fair, and we are inclined to think the shares worth picking up at present price.

Investor.—Both are good, but on the whole we should prefer No. 1, which might be bought now. The smaller proportion you name would be quite a prudent one.

D. R.—The prospects are poor, we are sorry to say, but there may be a spurt up one of these days, which you should take advantage of to clear out.

H. D. R.—(1) The bonds seem to have risen rather too fast, and there might be a set-back; but in the present circumstances there should be no great harm in buying a few. (2) We should not like to have anything to do with the concern named.

J. F. K.—(1) If B can be bought at prices yielding an adequate return on the money, that form of investment is, in the circumstances, to be preferred to market securities yielding 4½ per cent. (2) The firm is a good one, we believe, and the business ought to recover so that a small purchase of both classes of shares should turn out well. We treat these as two questions, and hold 1s. to your credit.

Rion.—(1) A go-ahead company, but its investments are too limited in range, and we prefer No. 2, but think you might do better than with either. (3) This is not an attractive security in present circumstances, and we fear the concern may again slip into difficulties. The guarantee is duly met, but still the bonds are not cheap. We are sorry about the bearer bonds. Could not your banker take charge of the coupons?

J. W. M.—There is no knowing what will happen to this property within the next twelve or eighteen months, and you are well out of your shares, in our opinion. Better not think of buying back at present.

M. D.—(1) You should keep these, but do not be in any hurry to buy more while the present state of the trade continues. (2) It is due to the poorness of the yield per ton, and the general setback in the industry in that part of the world. (3) On the information so far available we are unable to give a very definite opinion, but on the known facts we do not relish the proposal. Wait a little before deciding.

F. E. D.—(1) This offers not at all a bad speculative chance, but the market seems rather demoralised at present. (2) This, too, should do well in the near future, only unfortunately you cannot in the least rely upon the people who control the property. All depends upon the state of their gambling account. Still, the market wants more capital, and prices may be put up.

W. A. P.—We know of no better security in that class, but you must not forget that they are all pouring out new capital at a rate which will tell when the tide of prosperity turns. We will make no additional charge this time, but may say that what we find most troublesome and unfair is the submission of a string of securities out of which we are asked to pick two or three.

Alma.—On the whole, we think you should keep the stock for the present.

T. C. W.—The general cause of depression in this section is the state of the trade, and as that, we fear, will not soon change for the better there cannot be any immediate rise of any substance in the shares.

Grasmere.—We see no reason for disposing of these shares at a loss unless you are anxious to reduce your interest in the company at once. The undertaking is launching out in various directions, with good prospects of success, and by waiting you should be able to get out at something more nearly approaching the price you paid

---

Mr. Herbert Allen has joined the board of the Baku-Russian Petroleum Co., Limited, and has accepted the chairmanship of the company in succession to Col. Ivor Philipps, M.P., resigned. A circular to the shareholders will be issued by the board at an early date.

At the shareholders' meeting of the Manchester and Liverpool District Banking Company, Limited, after declaring the dividend, resolutions were passed (subject to confirmation by a second extraordinary general meeting) extending the provisions of the memorandum of association of the company to include power to undertake the office of trustee, executor, administrator, treasurer, or any other office of trust or confidence, and to keep for any municipal or other corporation, company, government or body, any register relating to any stocks, funds, shares, or securities, and to undertake any duties in relation to the registration of transfers, issue of certificates or otherwise. At a subsequent meeting of the directors Mr. Angus A. G. Tulloch was appointed as an additional managing director.

TRADE AND PRODUCE.

Wheat.—A dull tone has prevailed in most of the markets during the week, and English and foreign wheats have both gone in buyers' favour. Prices for futures in particular have dropped, and the Liverpool market, influenced by American weakness, shows a decline of 3⅛d. for May wheat. But it is not likely that lower prices will be the general rule for the present, at any rate, though they may fluctuate from week to week, the statistical position being too strong to allow of any steady fall. Of all the wheat-exporting countries Argentina has produced a crop above and not below the average. Farmers' deliveries last week amounted to 53,308 quarters, averaging 35s. 2d. against 47,667 quarters averaging 26s. 1d. a year ago. Imports were larger than the preceding week at 371,933 quarters against 325,687 quarters, and the quantities of wheat and flour on passage to the United Kingdom are estimated at 2,660,000 quarters against 2,310,000 last week, to the Continent at 1,020,000 quarters against 980,000. American markets declined at the opening, and though they recovered a little later on the tone generally was weak.

Wool.—Very little has been done in the markets this week, as they are mostly holding back business till the London sales begin next week. Merino topmakers, in fact, are in some cases declining to quote, as they feel confident that these sales will show firm if not firmer values. Supplies, at any rate, will be ample, for besides 187,000 bales of Australian wool coming forward there are 14,500 bales held over from last auction, and also the usual quantities from other wool-producing countries. Spinners and manufacturers are also only doing a moderate new business, neither being inclined to accept present offers for contract in view of the probable rise in raw materials.

Cotton (from our Manchester correspondent).—American cotton has shown a tendency to advance this week, and both spinners and manufacturers continue to lose ground. Higher rates cannot be obtained from buyers of yarn and cloth, and margins are being adversely affected. The wages dispute has been the subject for considerable discussion, and the position is certainly very serious. Both sides are firm in their attitude, and at the time of writing no settlement appears to be in sight. It is said, however, that Mr. Lloyd George is about to visit Manchester in order to get the two sides together. News from the States with regard to the cotton crop is not very important at the moment. Messrs. Neill Brothers have issued a circular, in which they maintain their former estimate of 11,600,000 bales. The advices being received are mostly of a "bullish" character, and it is said that efforts are being made to form a corner. There has been rather more doing for China in piece goods. Certain makers of shirtings have met with improved offers, and fancy goods have moved off a little better. The total sales, however, cannot be described as important. The turnover for India continues of small dimensions, and a large line is exceptional. The nearer markets of the Continent have been slow, few sales of weight being put through for any of the different outlets. Advices from South America are somewhat discouraging. Manufacturers continue to do badly, and certain firms are not paying very promptly. Rumours are current of financial difficulties. Short time is increasing, more looms being stopped, especially in the Burnley district. Home trade American yarns have moved off very quietly in both twist and weft. The supply is increasing, and spinners are not so difficult to deal with. Fairly early delivery can now be secured in certain counts and qualities. Export bundles have not commanded much attention, although there has been some inquiry for the Eastern markets. Bolton spinnings remain very quiet. Spinners are losing ground all along the line. Quotations are much easier on the week.

Coal.—House coal demands have tailed off again with the milder weather, but so far stocks are not accumulating, and values are likely to be maintained. The coke trade is stiffer, for though consumption has fallen off, production has been still more curtailed and prevented any further fall in prices. In steams generally there seems less doing. Prices on the Welsh markets are certainly easier, best steams now being quoted at 18s. to 18s. 6d., and both prompt and future business is dull. The Scottish demand also has fallen off, and in one district manufacturing coal has been reduced from 6d. to 1s. per ton to help meet the depression in the prices of manufactured goods, but the reduction is not considered to be adequate.

Copper.—The market opened firmer under bullish American advices, and with large speculative purchases prices rose steadily till Wednesday, when they slipped back a little. Yesterday's dealings opened with a further decline of 5s. for three months, then recovered, but fluctuated down again on the increase in the visible supply, and closed at a reduction of 15s. on the day at £63 7s. 6d. for cash and £63 15s. three months. Today the market was quiet, and closed at 62¾-63 for cash and 63¾-½ for three months. Messrs. H. R. Merton and Co., Limited, give the visible supply as 20,870 tons against 19,710 tons at end of December. Supplies for the first half of the month amount to 20,351 tons, and deliveries to 19,191 tons, making stocks in England and France on January 15 13,595 tons against 13,060 tons on December 15. The Chili charters total 1,300 tons.

Tin.—With higher Eastern advices, restricted offerings and fair forward purchasing the market opened at 12s. 6d. advance, and later improved further to £125 10s. cash and £126 10s. three months. After that prices fluctuated, and gradually eased down under a poor support, in spite of continued firmness in the East, where business kept about £127 c.i.f. London, and yesterday

closed at £124 cash and £125 three months. The market was steady to-day at £123 for cash and £124 for three months, middle price in both instances.

IRON AND STEEL.—The pig-iron position is not by any means satisfactory, and reports from nearly all markets are of a more or less gloomy nature. Even at the reduced prices business is not forthcoming, forward business especially being difficult to negotiate, as buyers do not consider they will lose anything by holding off. Cleveland pig-iron is steady, and as the three months' price of metal is now only 5d. below prompt, whereas a short time ago it was from 3s. to 3s. 6d. per ton, some makers seem to think that the worst is over, and that present quotations will be maintained throughout the spring. One feature, however, is regarded as unsatisfactory—that is, the steady increase in public stores since the beginning of the year, instead of the decrease that took place all 1907 and most of 1906. Hematite prices are still falling, 59s. per ton being now quoted for East Coast mixed numbers, and West Coast warrants are down to 64s. per ton, nett cash; nor is any improvement looked for as long as the shipbuilding industry remains so depressed. The steel trade is very quiet. Scotch makers are only partially employed in some works, and in others almost idle; only at Barrow and Belfast are mills busy on local orders.

TEA.—Messrs. Gow, Wilson and Stanton's report states that the arrivals of Indian tea since the commencement of the season are already 10,000,000 lbs. less than last season, and with the probability of a still further reduction, the position appears sufficiently strong to warrant producers offering supplies in moderate quantities, especially just at present, when the financial position continues to be somewhat strained and trade is still feeling the effects of the holidays. Indian importers brought forward rather more than last week, and the market was somewhat irregular, although common teas of all kinds kept practically at 7½d. The finest sold steadily, but medium grades were frequently ¼d. per lb. cheaper. 42,613 packages sold out of the 44,905 offered, and obtained an average price of 8.43d. against 7.82d. a year ago. Ceylon auctions, on the contrary, were much smaller, only 28,454 packages being offered, but, even so, there was no recovery in prices, and here also medium kinds frequently showed a fall of ¼d. per lb. 8.14d. was the average for the week against 8.04d. in 1907. There was a fair inquiry for Javas, and the 3,838 packages brought forward sold at steady prices except in a few of the lower grades.

SUGAR.—Fluctuations in prices have been very small during the week, May beet not varying more than 1¼d. or so and closing at 1s. 1¼d., the Cuban weather reports and weekly receipts in the island not having much effect upon consumers. Trade in actual sugar has been quiet, says Mr. Czarnikow, but with the moderate stocks in dealers' hands and present obstacles to Continental inland navigation, a renewal of demand may be expected. The American market is under the influence of the small Cuban receipts, which so far are considerably below those of last year, and have created some uneasiness. Refiners needing supplies, holders of raw were enabled to raise spot values for 96 per cent. centrifugals to 3.92½ cents. Mr. Czarnikow's circular gives an interesting feature, indicating the small holdings of raws by refiners in New York—the purchase of a stored cargo of Java at 4.10 cents. Landings in the three ports for the week were 15,000 tons, and meltings 25,000 tons, reducing stocks to 99,000 tons.

NEXT WEEK'S MEETINGS.

MONDAY, JANUARY 20.

Burton Brewery.—Burton.
Crown Brewing.—Rochdale, 7.30 p.m.
E. W. Tarry and Co.—11, Ironmonger Lane, E.C., noon.
London and Provincial Bank.—Cannon Street Hotel, 12.30 p.m.
Mining Exploration.—Winchester House, noon.
Peruvian Pacific Railway.—Winchester House, 2 p.m.
Reliance Marine Insurance.—Liverpool, 11.30 a.m.
Union Bank of Australia.—71, Cornhill, E.C., 1 p.m.

TUESDAY, JANUARY 21.

Frederick Sage and Co. (1905).—Holborn Restaurant, 2.30 p.m.
Hyam and Co.—20, Copthall Avenue, E.C., 11 a.m.
Manica Copper Development.—Salisbury House, 2.30 p.m.
Munster and Leinster Bank.—Cork, 1 p.m.

Bank of England	1,526,731	1,088,862	
Bank of Ireland	493,941	535,072	
		2,020,672	1,623,934
Total		125,021,946	128,018,498

NOTE.—The Revenue and Expenditure figures for 1907-8 have been adjusted to give effect to Section 17 (5) of the Finance Act, 1907 (7 Ed. VII., cap. 13), with respect to Local Taxation Grants, and the figures for 1906-7 have been similarly adjusted for the purpose of comparison.

MEM.—Treasury Bills outstanding on January 11, 1908:—

Bills issued by Public Tender	£13,213,000
Bills otherwise issued	2,500,000
Total	£15,713,000

Treasury, January 14, 1908.

By an oversight, the reserve of the Union Discount Company was given at £465,000 last week after the £15,000 from profits had been added to it. That was the figure before the addition, so the reserve is actually £480,000.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 525. New Series. SATURDAY, JANUARY 25, 1908. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Some Thoughts on Parliament and Public Economy.

Before another number of this journal appears, the House of Commons will once more have gathered itself together to begin its third session of law-making and empire-ruling. It meets next Wednesday, and will have much to do and more to say during the next seven months. A very babel of demands, projects and criticisms has deafened men's ears during the recess, and small issues without number have been raised, which, if leading nowhere in themselves, have at least often served to direct attention from the great, the urgent necessities of our day. The nation wants relief from the excess of its burdens, for the dead weight of empire is becoming too great to be borne, and India, above all, must be elevated in some degree, and as a first step towards the freedom promised to its peoples in the late Queen's proclamation after the Mutiny. If the home population is to have peace to enjoy the fruits of its labours, it also must have rest from its fevers and cares. What a business this empire-guiding has come to be; a labour too great for any one man, or for the score of men now gathered round the Prime Minister's table in Downing Street. Is it to be wondered at that Sir Henry Campbell-Bannerman's health broke down? The wonder rather is that after his recovery he has the courage again to stand up to his gigantic task. His enemies and detractors wish he had not, would like to see him retire to the Lords, knowing well that, deprived of his leading in the House of Commons, all might soon fall into confusion there. His shrewd, prompt, kindly commonsense has often saved the situation, and will often do so again. Therefore, he must husband his strength and reserve himself for emergencies, of which there will be not a few between now and grouse day.

It is not merely that suffragettes will clamour, or that the Labour party will strive after the endowment of old age, and it may be worthlessness, at the expense of what it calls "the rich"; that schemes of land subdivision will be pressed on; that Ireland will still block the way with its many and just causes of discontent, or that the reform of the House of Lords may generate much speechifying. Underlying all these sources of worry is the economic state of the kingdom. That steadily goes from bad to worse, and must do so while individuals, corporations, the nation and the heterogeneous subdivisions of the Empire continue to live on capital, to disregard warnings and discount the future. There never was an empire in the world so completely a thing of finance as ours, but the very fact that it is so renders a return to the ways of prudent economy most difficult.

An increasingly sharp note of complaint may be discernible in these columns against the acquiescence of the present Ministry in the habits of unthrift established by its predecessors, and it is a well warranted complaint, although fairness obliges us to admit that heroes alone can be trusted to perform political miracles. It is much easier to go with the stream, to

take official life easy and to let the next comers reap the reward of inaction. And is it not the law of empires that each should work out its destruction in its own way? For us empire means never-ending nightmares, now a terror about the ambitions of France, anon a scare about Russian designs upon India, and at the present moment shivers and cold sweats about Germany. There is no part of the earth's surface where we can be held exempt from an alarm of wars and mediæval thievings. Germany is to-day the favourite hobgoblin of our dreams—Germany is meditating the annexation of Holland, and probably of Luxemburg and Belgium as well. Germany has deadly designs upon the remains of the Turkish Empire. Germany may trick us into a war to help France in Morocco, and in South America there is no knowing what the swarming, overflowing population of the Teutonic Empire may not do. She may even invade us and carry away our jewels and mortgages.

You cannot reason with a passion of fear thus excited, thus all-dominating—you must bow to it and spend money to make your country "safe." And we spend, and Germany spends, and France and Italy and Russia and the United States all spend with imitative fury. Even Spain enters the arena, and talks of a navy, and every year the power of the great masters in usury over the lives and fortunes of the peoples, who must pay for all this rage of preparation for a world-devouring Armageddon to be in the fashion, increases; and so also does their stake in the maintenance of peace. All European nations are being withed in debts, devoured by the menacing exigencies of imperial requirements, the inspiring motive for most of which is mere blind terror, an ever active "blue funk," as we have irreverently described it. That is the fate of our Empire, the dominating impulse pushing on all empires into the abyss of inanition; and the strongest popular Government ever brought together could not avert the doom.

But a strong Government might mitigate the speed at which we hurry towards national impotence, Imperial decay. It might take note of the fact that there is another side to all this grim procession of haunting visions of the night to which uneasy consciences are a prey, and, noting, take courage to deal openly and above-board with the demands made upon the energies and savings of the citizen. There is too much "ditto, ditto," to the permanent bureaucracy in the attitude and language of all politicians when they become officials exponents of administration. That other side is, as Lord Cromer has done well to emphasise, the continuous development of peace interests between nation and nation. Imperial expenditure, with its consequent tariff barriers and oppressions, may deflect, obstruct and modify the gulf stream of international trade, but it cannot prevent it from increasing in magnitude, if not every year, at any rate on the average of years. For 1887 the value of the total trade between the United Kingdom and Germany is given in the *Statistical Abstract* at nearly £52,000,000, and in 1906 it exceeded £86,000,000. Between 1892 and 1906 inclusive our trade, out and in, with France has risen from about £65,000,000 in value to about £83,000,000. These figures are exclusive of bullion, and the same kind of peaceful progress in mutual helpfulness and friendly interchange of the products of labour has been manifest nearly everywhere. If but permitted to continue without violent interruption the barter of the world's commodities will destroy the possibility of war between civilised peoples; make war as ruinous to them as it would be between Liverpool and Antwerp.

And the mere trade aggregates form but a part of the influences unremittingly at work to deliver mankind from the curse and scourge of wars. Side by side with the development of trading and industrial interdependence is growing up interdependence in credit and finance. Here we have the better aspects of international credit-mongering and banking, and they are working to create an all prevailing force of mutual self-interest inimical to war in the shape of each country's vested interest in the prosperity of the others. Surely this force ought to make the outlook clearer for the statesman and his labours for economy easier. The day must come, through self-interest, if you will, but also through friendliness and the absence of overriding motives impelling to quarrels, when the blighting domination of the man-killing castes will be overthrown. Why should not a beginning be made now? Why must industrious and civilised nations part with much of the advantages they have secured by their industry and freed labour in order to maintain, in the interests of a caste, in slavish obedience to tradition, a devouring system of prepreration for war on a scale not only strips them of all they have gained, but threatens them with destruction? There is no reasonable answer to these questions. The answer is found in passions excited, ignorances fostered, prejudices cultivated, and national antipathies fanned into activity.

"Excellent sentiments," the reader may exclaim; but how are you going to set to work to grub up this upas tree, or to "ring" it so that it may wither and die? We have only one "first-aid" remedy, the simple one of bringing the bureaucracy to book before Parliament. Were we a Minister of State, as we are happy in knowing we never can be, we should resent the treatment that now makes every Minister in turn the scapegoat of the permanent officials; their mouthpiece, screen, and apologist. It is by playing such a part that Ministry after Ministry uses up its popularity and becomes a victim of the uninstructed, passion-ridden voter. Weekly immense piles of undigested and indigestible "estimates" are submitted by Ministers to the House, with due coaching, so that they may say what they are wanted to say, and the House talks at large or accepts in silence, and the Bill thus drawn is duly honoured by the taxpayer. Yet confusion and the trickery of sacred use and wont are visible on almost every page of these estimates. Why, therefore, cannot the Minister in charge muster up courage to tell his nominal subordinates that these clotches of meaningless figures must be overhauled by committees of the House, which the officials responsible for their compilation will be expected to attend for examination and cross-examination? Were committees on all branches of the estimates and on all contracts formed out of every section of the House, and were minutes of these proceedings published along with their reports before the public debates took place, the Government would at least compel the permanent officials and the House itself to share whatever odium might attach in the magnitude of the demands formulated. Our complaint is, and has been ever since we first tried to get at the meaning of the War Office and Admiralty estimates, that Governments never do anything effectual to assist, still less to maintain, the supremacy of Parliament over the nation's purse. So long as Governments are thus apathetic or indifferent their popularity must always be brief, were it for no other reason than because the odium of unchecked departmental waste and jobbing is all heaped on their heads. And the most valiant reformer cannot root out abuses alone.

Will the Prime Minister take thought of these considerations, and insist that his colleagues must move in the direction of economy and efficiency by compelling the House to come to their assistance? What we now have is departmental waste and inefficiency, and so great is the waste that no one need be much surprised were it found possible to provide a stronger army and navy than we now have at a cost of £15,000,000 per annum less money. Many millions a year we are positive would be saved as a result of making Parliament work at estimates' inquisition, and revision, instead of leaving it to drift along vexed with its impotence, in an ignorance and irresponsibility which exactly suits the permanent officials and their surrounding hordes of people who grow fat on the nation's leanness. There is the more urgency to initiate this reform in that "bad times" are upon us—shrinking trade, lower prices, more insolvency, and a greater mass of unemployed.

Austro-Hungarian Finance.

People who are sometimes inclined to grumble at the slackness of our own Parliament in dealing with the finances of the nation, and we are amongst the number, may perhaps extract comfort from a report just issued by the Foreign Office, and compiled by Mr. L. D. Carnegie, Councillor of His Majesty's Embassy at Vienna. It is well written, and deals with the latest statistics concerning the separate budgets of Austria and Hungary, as well as the charges common to both met by these two component parts of the Hapsburg Empire. One would imagine that the population of the Austrian part of this empire would take a keen interest in their public affairs, especially in the budget, since the expenditure of the State has been growing of late years with remarkable speed. The total estimate outlay for the current year is over £14,500,000 larger than the actual outlay for 1902. Revenue has no doubt been growing in a remarkable fashion, but still the expenditure is so progressive as to have stimulated interest, one would have thought, in the nation's finances. Nothing of the kind appears to have been experienced. So much is the Reichsrath occupied with its racial quarrels and sectional jealousies that it never has time to look at the budget, and does not even condescend to pass the ministerial estimates. "Year after year the Minister of Finance lays his budget before the House," says Mr. Carnegie, "and it is allowed to die a natural death." But how is the business of the empire carried on? When everything else fails an Imperial decree is issued ordering the collection of taxes to be continued on the basis of existing laws, and when the Reichsrath does condescend to pay attention to the Ministry of Finance, it simply passes a "vote on account" in that slip-shod fashion which always arouses the wrath of publicists in this country when any Government of ours is driven to adopt it.

Having in this fashion abandoned control over the expenditure or income, the permanent officials are left to conduct the affairs of the country in their own way, and they seem to do so with remarkable prudence. They enter into new enterprises, conserve or expand the army and the marine, build and improve railways, raise money on loans and generally behave with an automatic regularity quite admirable, superficially at least. For all that the Austrian Empire must be politically very near to a state of anarchy when this is the fashion of its Parliament. It cannot, however, be said that there are any indications of financial confusion in the summary of figures to be found in this report. Budget surpluses may not often be large, deficits, indeed, are sometimes encountered; but the most creditable fact of all is that the expenditure should not grow faster than it has done, and that the demands of the military and naval departments should be apparently so restrained. In the amended budget for the current year, which estimated for an income of £7,504,000 larger than that of the past year and an expenditure greater by £7,534,000, a surplus of £37,000 was still looked for, and it does not seem as if the people were overtaxed. The country has been prosperous for years past, and instead of any difficulty being experienced in collecting the taxes they have bounded up apparently without any turning of the screw whatever. The enhanced new tariff may check the fertility of the Customs.

A great deal of the money is absorbed by objects of utility. For example, the Minister of Finance in laying his budget for the current year before the Reichsrath in October, 1906, proposed to devote £1,312,000 of the surplus inherited from 1905, which was £2,167,000, to improvements on the State railways; another £208,000 was to be devoted to hospitals, £250,000 to the establishment of co-operative society banks, £125,000 to land improvement, £42,000 was earmarked for the promotion of foreign trade, £83,000 devoted to combating tuberculosis and £148,000 to the Galician Railway. These assignments give a fairly just indication of public policy. A larger proportion of the Austrian revenue seems of late years to have been devoted to purposes of general utility than is the case with any of the great Western Powers. Thus in the year now closing the civil services, including the Ministry of the Interior, the Ministry of Finance, of Public Worship and Education, of Commerce and of Railways as well as the Ministry of Agriculture, took under the original estimate about £57,000,000 of the entire revenue which was at first put at £78,000,000. When the more generously outlined estimates were tabled in June last before the new Parliament, amounting to £80,370,000, no less than £67,000,000 was swept away by these various ministries and the Ministry of Justice. Another £11,492,000 went to pay Austria's share in the charges common to the two parts of the empire whose budget settled by the delegations from the two Parliaments runs to between £18,000,000 and £21,000,000 per annum. Whatever portion of this charge the assigned revenues do not cover Austria pays 65.6 per cent. and Hungary 34.4 per cent., and in the current year the deficiency to be made good by the two countries was put at £17,000,000, which meant that £7,294,000 had to be found out of Austrian taxation and £3,824,000 out of Hungarian, the balance being gathered by the nett Customs revenue devoted to this purpose under the new homogeneous Customs tariff. That source is estimated to yield £5,883,000 in the current year. But how small is a budget charge of little more than £18,000,000 for the imperial army and navy compared with those of the Western Powers. The Austro-Hungarian army costs only £14,612,000 in the current year, and the charge for the navy is put at £2,713,000, both items including the extraordinary outlay. Instead of spending millions of money per annum in building *Dreadnoughts* the total outlay upon the Austro-Hungarian navy for the current year was estimated at the above total, of which £918,000 was "extraordinary," and it really seems quite enough.

Coming back to the disorganisation of Austrian politics, we are told that no completed Austrian budget has been passed by the Reichsrath since 1892. The British custom is nominally followed in Austrian financial statements, only that the budget year is conterminous there with the calendar year, but the completed accounts of a closed year may not be made up until several years subsequently, and the accounts for 1904 seem to have been laid before Parliament only this year. But Parliament takes no notice of them; never gives them the slightest examination, and they remain unpassed equally with the new budgets. In such circumstances the marvel is that the exhibit seems to be so well ordered, but perhaps the very apathy of Parliament keeps down expenditure by hindering the Ministry from raising loans. Powers have been demanded, however, to raise a good deal of borrowed money, and some of these powers have actually been granted. For all that the public debt does not expand in the way it might do if Austria had a zealous democratic Parliament eager to lay hold of everything that is likely to conciliate the working classes and to promote the popularity of statesmen. And the debts of both Austria and Hungary are by no means trifling in view of the comparative poverty of the people. Under all categories the debt of Austria amounted to £198,000,000 in 1905, and the debt of Hungary to about £171,000,000. How much of these debits is held by the people in Austria Mr. Carnegie does not apparently have the means to indicate, but he does quote one interesting observation made by the *Pester Lloyd*, to the effect that out of £171,000,000 of Hungarian national debt nearly £42,000,000 is held in Hungary itself, that out of mortgage bonds issued by the various land banks and amounting to £64,583,000, nearly £17,000,000 are retained in the country. Then there are communal loans and River Conservancy loans amounting to over £10,000,000, all of which seem to be held at home, so that in these various directions about £69,000,000 of native savings is invested in revenue-bearing home-made securities, and out of nearly £62,000,000 of securities quoted upon the

Budapest Stock Exchange, excluding the shares of the Vienna Bank and of the Austro-Hungarian State Railways as well as of deposit banks, some £32,000,000 belong to Hungarian banks and savings banks, the rest being divided amongst shares of transport companies and industrial undertakings. Assuming that only 70 per cent. of this large sum is held at home, and adding in various other items of a similar description, the writer arrives at the conclusion that Hungary has saved about £126,000,000, all of which is invested in domestic stocks or shares yielding interest, while the deposits in the savings banks and in the general commercial banks rose last year to more than another £125,000,000, so that altogether the personal wealth of Hungary is computed at £251,000,000, surely an excellent exhibit for a land that less than a generation ago appeared to be sunk in hopeless poverty.

It may be worth noting that the Austrian Government always keeps in hand a large Treasury balance. This seems to be wrapped up with the accounts of the State Savings Bank, and the deposits of that department are included in the total of the Treasury funds, which is never allowed to fall below £17,000,000 and is generally in the neighbourhood of £22,000,000. The total deposits in the savings banks—of the two countries we judge—appeared to be about £138,000,000 in 1906, which was nearly £8,000,000 larger than the total of the previous year and nearly £22,000,000 above that of 1904. No surer indication of prosperity could be given than this, but then the country had a series of three excellent harvests, that for 1906 having been the best for twenty years. As the harvest of the present year has been poor all over Europe, and not least so in Austria and Hungary, it is possible that some diminution in the accumulated savings may take place, but, on the other hand, the spread of general wealth and the very fact that such masses of money have been laid by or invested should make the population much better able to bear the passing wave of adversity. What is the real function of the "Post-Sparkasse." The tendency of the Treasury, Mr. Carnegie says, is to put it more and more in the position of banker to the State.

Economic and Financial Notes.

The Japanese Budget.

At last we have an authoritative summary of this important document, and its perusal awakens mixed feelings. In the first place, it is impossible not to feel strong sympathy with the Japanese Government and people in the resolute struggle they are maintaining to surmount the difficulties brought upon their country by the long and destructive conflict with Russia. How great the strain put upon a high-spirited people by this war is may be measured by the statement that the amount of money to be transferred to the National Debt Consolidated Fund to cover the debt charges for the year 1908-9 is £17,600,000. Before the war the highest budget expenditure, ordinary and extraordinary included, was barely £30,000,000 under all heads. And if we go back twenty years we get a total of less than £23,000,000, and now the debt alone involves a charge of nearly £18,000,000, while the total of the budget even as now reduced is £61,600,000. To be sure of this sum £18,900,000 is classed as extraordinary, but a division of that kind makes little difference to the weight of the taxation, direct and indirect, put upon the people, and only the most rigorous self-denial and economy in all departments of outlay can prevent serious difficulties from confronting the Government at no distant date. We are all the more pleased, therefore, to note that estimates are being revised and, in particular, a rumour which said that £13,000,000 was to be expended on railway construction and improvement spread over the next twelve years, or upwards of £1,000,000 per annum, is contradicted; at least the Government, it is now stated, has decided to cut down the contemplated outlay to £3,000,000 spread over six years, or at the rate of half the previously contemplated amount per annum. On the other hand, the above-mentioned debt charge is £1,000,000 more than that provided for 1907-8.

It is at this point where we have always been disposed to differ from the policy of the Japanese Government. Looking at the resources of the country, at the absence of any large mass of accumulated wealth there, and still more taking into account the enormous tasks the Japanese have assumed in Korea and in South Manchuria, not to speak of Formosa, it has always seemed to us that less eagerness should have been manifested to provide for a rapid redemption of debt. Heavy as the foreign debt of Japan is, its mere interest charges cannot well come to within £5,000,000 of the amount set down to be transferred to the Debt Consolidated Fund in the new budget. Why then pay the debt off so fast? The doing so will not improve the credit of Japan upon European markets, nor do anything appreciable to facilitate further loan operations there, because so much money cannot be spared out of the possible revenue without putting a too severe strain upon the country, a strain retardent of its recuperation. No borrowing, we are glad to see, is to be indulged in except that a modest sum of about £4,000,000 is to be raised for railways, telephones, and ironworks, but even that amount will not get a kindly welcome here or on any European market while it is so patent that the Japanese people are in the throes of an economic crisis which threatens to prove perennial. But how is that shown? it may be asked. It is plainly enough to be seen in the kind of additional taxation which is proposed. No further direct taxes appear to be possible. We are told that a permanent source of fresh income is to be sought in place of the temporary expedients hitherto resorted to, but what is this permanent source of income? Wholly indirect taxation, some of it of a very questionable description. The sake or drink tax is to be raised as well as the tax on sugar consumed. A consumption tax on kerosene is to be created, and the price of tobacco, which the Government made a monopoly during the war, is to be advanced. Now if the Government could have appealed to the rich, or even ordered the presumedly large middle-class to pay more direct taxation, it would not have been necessary thus to throw the whole of the extra load imposed by the debt and the post war charges upon the consumer, in other words upon the great bulk of a population which stands in the ranks of poverty pretty much alongside our Indian ryots. The hope is held out that, although at first yielding little to the Treasury, these new sources of revenue will become prolific in a few years. We are not at all sure that we can share this hope, just because the people are already so helplessly poor. If prices are raised by the new taxes they will consume less, and amongst considerable masses of the nation hunger will become chronic as it has done amongst the millions of our Indian subjects.

The best piece of news in the summary is that the Government has decided to postpone various items of military, naval, and other expenditure which had been authorised as a permanent charge on the Exchequer for a certain number of years. Here again, however, we have indirect proof that the Japanese people are being called upon to meet a heavier national expenditure than they have resources to enable them to face. And is this reduction to be something really beneficial? We cannot tell from the language of the Reuter message. By this means, it says, the Government has reduced the total expenditure for these items by £12,000,000, but how much is the reduction for one year? We shall have to wait for more light before being able to answer this question. It is to apply to a period of years, the message says, including 1908-9. Had it been limited to three or four years the relief would undoubtedly have been sensible, but if it is spread over eight or ten years then the assuagement will not be appreciable to the humble taxpayer, and can only have some effect upon the amount of assistance the Japanese Government may be obliged, under one pretext or another, to appeal to European money markets to supply. True as all this may be, can Japan help her-

self, with foes and jealous rivals raging all around, with Mr. Roosevelt's fleet on its way to the Pacific, giving birth to evil menaces as it goes, with China snorting and Russia biding her time? We fear not.

THE NORTH BRITISH AND MERCANTILE OPTION POLICY.

Why are we not at least younger by a quarter of a century! This exclamation wells up as one reads the pamphlet issued by the North British and Mercantile Company setting forth the qualities and merits of its new "twentieth century option policy." Many of the stronger and better insurance companies are endeavouring to meet the new wants in this fashion, and the only essential difference perhaps between one scheme of the kind and another is in the liberality or ingenious variations of the offer made. Liberal the North British Company's alternatives appear to be. It gives some half-dozen options to those who take out its new policy, including immediate protection in the case of early death to those who survive the insurant. The contract of the policy may be liquidated by an endowment payment in cash or partly by that and by a fully paid up policy of insurance, or by an endowment insurance and a life annuity of so much per annum, or by a life annuity beginning at the age of 60 and exhausting the policy, or still further by such an annuity plus a fully paid policy, or the insurant may take a fully paid policy payable in twenty yearly instalments or one disbursed in a single sum at death. Those who are seeking insurance had better get the little pamphlet itself and work out the various prospects. Insurance offices, we may add, especially the wealthy and carefully managed ones, do well to offer new attractions of this description to the public, and the present is the right moment to make a movement of this description because people have suffered so much through the depreciation of the capital value of their investments, even when the interest has remained as before, that they are ready to seize on any reasonable offer which guarantees both principal and interest as this twentieth century option policy scheme does. And although the insurance offices have suffered by the fall in the prices of public securities they have now a means of compensation often denied to the private investor in that they are continually receiving further sums of money which they are able to invest at lower prices, thus at once putting themselves in possession of a better return than they were able to secure when prices of stocks were high. They can "average," in fact, both principal and interest on a wholesale scale, and if the advantage arising to them from their position in this respect is passed on to their clients in ways such as this policy embodies they ought to experience a great increase in popularity and business.

TITLE GUARANTEE AND TRUST COMPANY OF NEW YORK.

Under dates January 11 and 14 two letters have been sent to us by this company relative to the mistake made in our issue of November 9 last, in which, misled by the curtness of the cable message, we confounded this company with some other of similar name out west. The mistake was discovered, and voluntarily corrected in the succeeding issue thus:—

Last week we were led into an involuntary error in mentioning the Title Guarantee and Trust Company. As no indication whatever was given to the contrary, we assumed this to be the New York company bearing that name, but it turns out that an Oregon company was referred to. We were, therefore, premature in indicating the approach of trouble for the big insurance companies, but only premature.

We never like to make mistakes, however unwittingly, and regret sincerely that we tumbled into this one. Happily amid the confusion of the time we do not think that any appreciable harm was done, but in case there should have been we print with pleasure the following first letter from the president:—

Gentlemen,—Through inquiries from disturbed clients of the company in Scotland it comes to our attention that in your issue of November 9, 1907, there appeared the following item:—"Another Trust, the Title Guarantee and Trust, has gone into the hands of a receiver. This brings trouble upon the big insurance companies into view, and if the threatened industrial collapse goes far, as it must, a fresh crop of sensations will have to be gathered. The gamble in sites and buildings must also collapse." As we are the only company of this name in New York, and as our financial standing has never been impaired or questioned, we desire to make a very strong protest against your making statements of so much importance in so careless a manner. The article was perhaps inspired by the fact that a company of a similar name, in Portland, Oregon, was reported to be in financial difficulties, but if you pretend to give correct information to your readers, we cannot understand your not knowing the difference between Portland, Oregon, and New York City. There are a great number of companies in different States of the Union with the name "Title Guarantee and Trust Company," and it would have been just as sensible for you to have informed your readers that the National Bank of Commerce of the City of New York, one of the greatest banks of the world, and the strongest, had failed, when a bank of a similar name in a Western State failed. Furthermore, we are not a Trust in the sense that your article tries to imply, and have no possible connection with the insurance companies, excepting that one of them owns some of our stock. We are a trust company with a deposit line of twenty to thirty millions of dollars, doing a legitimate trust company business, and your effort to create a sensation and cause a disturbance here on false premises is very reprehensible. The company also guarantees titles to real estate, and its policies of title insurance are held by clients of the company living in Great Britain and on the Continent, and this publication by you is calculated to do us a great deal of injury with our foreign clients. Our trustees are very indignant that you should do such a thing, and some of them insist that we should bring a suit against you for damages. It is very hard to undo such damage as you have done, but you can at least attempt to make reparation by publishing a correction of your erroneous statement. The enclosed gives the facts, and we ask you to use the substance of it at least, and send us a copy of the paper containing the retraction. You can inquire of any of the larger American banking houses represented in London, like J. S. Morgan and Company, Brown, Shipley, and Company, Speyer and Company, or the Guaranty Trust Company, as to the standing of the company. In fact, had you taken the trouble to inquire of any one of them, you could have learned that your sensational information could not be correct.

Truly yours,
C. H. KELSEY, President.

Here also is the form of apology the president of the company has been good enough to send us, and now we hope we have given it sufficient compensating advertisement, and that it will prosper as heretofore:—

We much regret that in our issue of November 9, under our New York letter, we stated that the Title Guarantee and Trust Company of that city had gone into the hands of a receiver. The report originated from the failure of a company of a similar name in a Western State. The Title Guarantee and Trust Company of New York was organised in 1883. It is the strongest institution of its kind in the world, having a capital and surplus of more than $12,000,000. The capital is $4,375,000, and the surplus represents accumulated earnings. The company introduced into New York the present system of title insurance, and has been extremely successful in its business. During the twenty-five years of its existence it has issued over a quarter of a million policies of title insurance, and they are accepted by all of the leading financial institutions in the neighbourhood of New York. Associated with it is the Bond and Mortgage Guarantee Company, engaged in the insurance of the payment of the principal and interest of real estate mortgages. There are a number of these policies held by English investors in different parts of the world. The stability of both companies is so well established in the United States that our mis-statement could do them no harm there. We take pleasure in correcting our error for the benefit of those of our readers in other parts of the world, who are not so well acquainted with institutions in New York City.

The statistics enclosed we really cannot find room for, but it may be mentioned that the deposits of the company rose from $3,705,397 in 1900 to $20,511,045 in 1906, falling to $21,574,526 at the end of last year, but the surplus has risen with hardly a break from $3,282,000 in 1900 to $7,932,638 last year. It towers over its fellows.

American Business Notes.

All goes well in New York for an early return, or export, of some at least of the gold hurried thither from London in the closing months of 1907. Last week's New York Clearing House bank averages showed an increase of £4,400,000 in the specie, which brings the total held by these banks up almost to £46,000,000. At the same time the greenbacks in stock rose by £780,000, so that altogether the specie and currency averages were up by £5,240,000. Loans also expanded by about £1,000,000, so that nett deposits show an increase of £7,708,000, but in spite of this the surplus reserve increased by £3,310,000 to £4,527,000, as against £3,700,000 a year back. This is a very fine show without doubt, and it reveals the

extent to which the business of the Republic has been disorganised. It was followed in a day or two by the news that only about £4,000,000 of New York Bank Clearing House certificates remain outstanding out of a total of about £20,000,0000, and that by a fortnight hence they will all have been redeemed. All over the country, moreover, this illicit form of currency is being reduced or wiped out, and by and by we may perhaps get a statement of the gross amount created during the worst of the panic. In Boston the total outstanding early in the present month was about £2,400,000. In Philadelphia about £2,500,000 of this kind of paper was put out, and in Chicago, as already mentioned, £1,524,000, most of which has been redeemed.

There should be no difficulty in paying off the whole of this peculiar substitute for genuine assets, because trade demands are shrinking so fast, but the public that still has a little money in the United States and here should none the less refrain from giving it to the masters of the wealth-stripping business. They will have to exercise caution and self-restraint because the moment the cloud began to lift from markets leading manipulators commenced to spread their wares in order to attract cash from outside. Day by day Wall Street cablists inform us that the business is large, but they also candidly admit that the dealing continues to be "for the most part professional." We hope it will retain this characteristic for a good many months to come. Nobody outside may be much hurt if the Standard Oil group "goes for" the financial scalpers of the Granger group, if Harriman seeks to slaughter Hill and Hill Harriman; if the Guggenheims are hard pressed by Rockefeller raids upon their Smelting Corporation, and if more or less irresponsible players win and lose and lose and win in the day's turmoil. But markets are not healthy in spite of the remarkable renewal of activity and of the attitude of ecstatic amazement with which the Wall Street Press contemplates the "marvellous recuperative power" of the Republic.

Proof that this assertion is true lies all around, and may be summed up in the one cry, "Money, give us more money!" The New York City Treasurer thinks he sees his chance to raise more debt for the unlucky inhabitants, and report says he intends to offer a large amount of Municipal bonds because the city, in spite of its recent heavy borrowings, or perhaps partly because of them, is again much in need of funds. And as with New York so with other towns and cities throughout the Republic—they all want money, borrowed money. And railroad companies are, if possible, more clamorous still. It is said that the Pennsylvania Railroad contemplates an issue of £6,000,000 of new bonds, and the Erie Railroad is ambitious to get a like sum into its hands, if only Mr. J. P. Morgan will take the job on hand. He is on his way here to see what can be done, and we hope the London market will give him the cold shoulder, refusing to be beguiled by his specious words. Do not forget that his success as a debt-planter has not been uniform, nor yet as a company floater. Remember what his shipping combine is endeavouring to do to the shipping industry of the United Kingdom in its cut-throat reduction of fares on the ocean liners. Remember, likewise, the United Collieries fiasco in this country, and do not forget that the difficulties of the Erie are so acute as to render the appointment of a receiver by no means improbable. Receiverships, indeed, are "in the air" for several railroad companies. Mr. George Gould, however, has announced that he has been able to provide for the £1,200,000 of Missouri Pacific notes maturing next month, and the Erie Railroad may perhaps have staved off the crisis by selling its holding in the Lehigh Valley Company. An issue of £2,000,000 in notes is said to be in contemplation by the Delaware and Hudson Company. Messrs. Speyer announce that they are offering for sale £1,200,000 of Chicago, Rock Island and Pacific Railway first and refunding gold bonds recently bought by them from the Rock Island merger company. The bonds are offered at 85½ per cent., and will rank with those of the same series issued in 1905 at 98. The yield is about 5 per cent., and that is the lowest rate at which any money should be lent in the United States on railroad securities for some time to come. The directors of the New York, New Haven and Hartford Railroad announce that the £6,800,000 of convertible 6 per cent. debentures recently authorised have all been subscribed by the stockholders. If secured at, or under, par, these should form a very passable speculative investment, notwithstanding Mr. Mellen's feats as a combiner.

Money has become diseasedly easy on Wall Street, and call loans, instead of ranging from 50 to 200 per cent., as they did in the early partly of the October crisis, are now down to what the slang of the Street would describe as "a 2 per cent. basis." Call loans have actually touched 1½ per cent. Time money also has slipped back to between 4 and 5 per cent., and this change will, no doubt, give an irresistible impulse to the manufacture of new securities, without regard, as Mr. Doxatt said at the meeting of the National Discount Company, to the absorbing capacity of investors. But a check to the flabbiness of the market may be supplied by renewed exports of gold, and around the movements of the metal much curiosity will centre during the next three months. Is it true that the United States crop has been oversold, and that Argentine grain will have to be bought in order to find the wherewithal to liquidate those finance bills now beginning to mature here, created in order to buy gold in London? We have as yet no evidence in support of this assertion, and the foreign trade of the Union seems to be shaping itself in accordance with the necessities of the country for a decrease in imports for the month of December amounting to £8,513,000 concurred with an increase of about £3,400,000 in exports. Exports, however, are by no means flowing out with the speed one might have expected in view of the industrial collapse throughout the Union, and prices for raw produce, especially for cotton and grain of all kinds, are still propped in a way that checks sales abroad. Metals are also held up in price, probably because the holders would be bankrupt if they allowed the market to take its natural course.

Another symptom of the desperate struggle going on to maintain an appearance of solvency by help of credit balloons is found in the dividend announcement of the Louisville and Nashville Railroad Company, which is giving an extra 1 per cent. payable in the shares of the Louisville and Nashville Proprietary Company, a mode of increasing capital which cannot do either payer or receiver any good. And in view of the steady decline in traffic receipts, the railroads, had their managers displayed any regard whatever for stockholders' interests, should have reduced dividends, even if they had had free money in hand, which not one of them has. Look at the Baltimore and Ohio figures, for example. They show a decline of £513,000 gross and £546,000 nett for the month of December. This still leaves the increase for the half-year at about £223,000 gross, but the nett earnings for that period have fallen off nearly £400,000, and the decline is only beginning. It was stated by the chairman at the meeting of the Lehigh Valley Company that there had been a falling off of 25 per cent. in its business during the past two months, and Mr. Thomas added that the same conditions existed elsewhere. What is the use, therefore, of making arrangements to pay unearned dividends with paper in face of circumstances like these?

The warp and weft of good and evil incidents present a very mixed aspect this week, but a few of them deserve notice besides those relating to changes in the Money market. The Pittsburg Stock Exchange, for instance, will reopen next Monday. It has been closed since October last, when the breakdown of the Westinghouse group of companies brought Pittsburg into the very heart of the panic. We hope the failure of a small bank and allied trust company announced since in that city will not alter this determination. A small bank in West Virginia also suspended payment on Thursday. Other banks are resuming business—the Hamilton Bank, for instance. Commercial failures,

however, are still unpleasantly numerous, and according to Dun's Mercantile Agency, numbered 416 last week in the United States as against 262 in the corresponding week a year ago and 502 the week before. In Canada, however, the number fell off to 39 as against 42 the previous week, but what the liabilities are we have not heard.

For the worst has not yet been reached. Trade throughout the Republic continues to shrink, and railway traffic receipts promise to be worse month by month than they have been for a good many years past. It is said that the Pennsylvania Railroad is considering the propriety of reducing the wages paid to its staff of 180,000 men, and reductions will also have to take place in the charges made by the roads for work done. A little stir was given to Pennsylvania shares on Wall Street when the news became public that the Supreme Court of the State of Pennsylvania had decided that the law passed by the Legislature of this and of other States fixing the maximum railroad passenger fare at a penny per mile was unconstitutional. The question is not yet finally settled, because the dispute will doubtless be carried to the Supreme Court at Washington, but an attempt was made to raise prices a little and that immediately brought in sellers. Every attempt to prop the market up does this and must do it, because the finance houses are gorged with paper bought or taken over by them during the panic. Think what a decline during the panic of £73,575,000 in the deposits of the Trust companies in New York State must have meant in the way of strain elsewhere. The financial magnates must have pretty well pawned their last shirts or diamond studs, and laid hold of the last available dollar of insurance money to enable the Trusts to meet that drain without shutting shop.

So far, however, the principal gambling excitement of the week has centred round the shares of the American Smelting and Refining Company. It is said that the underwriting syndicate has been selling out on being called upon to take up its stock, and that the Standard Oil Ali Babas were seizing the opportunity to buy up for control. There was also a report that the dividend was likely to be severely cut down, and it was further averred that the Guggenheims, who control the company, were being obliged to sell Smelter shares in order to "protect" some of their recent acquisitions in particular mines. And the Reading "pool" is leaking, selling the shares of the company at 55. Some trouble has also been covered over, with a sheet as it were, for the time being, relating to the diamond trade. Two, some say four, diamond dealing firms in New York have been obliged to put their affairs into bankruptcy, and although it is said that they can show a surplus, its realisation will depend entirely upon whether or not the price of diamonds can be maintained. We have the gravest doubts upon that point. A large store in New York is also said to have been helped to the extent of £600,000 in order to prevent it from foundering, but the most suggestive piece of information relating to things of this kind that has come to hand is the fact that in spite of all the fine language employed to reassure people about the excellent state of the Knickerbocker Trust and its assets, two claims against the company for money on deposit put up to auction on the 2nd inst. were sold, the one at 60 per cent. and the other at 65 per cent. of its face value, several deposits having been previously sold, according to the tale, at 60 per cent. of the face value.

Particulars have now arrived of the affairs of Kessler and Co. of New York, who failed on October 30 last. According to these the total liabilities amount to £1,925,000, of which £482,308 is secured and about £1,161,500 is represented by contingent liabilities. The assets are said to amount to £1,872,000, including stocks and bonds of an estimated value of £454,723, some of which, however, are pledged. The cash was £30,500 at the date of the stoppage, and we get no idea at all as to how the liquidation will work out.

A striking decline took place in the receipts of the Washington Treasury in the last two months of 1907. Up to the end of October the lowest income for any month of the ten was $51,438,000 for September. In November the total was $45,529,000, and this rose in December to no more than $47,284,000. Thanks, however, to the great prosperity, as it is called, in the ten first months of the year, the entire income for the completed twelve months was about £5,538,000 more than that for 1906. The total expenses, however, went up by £6,800,000, and unless the outgoings can be reduced in future it looks probable enough that the financial year ending June 30 next will show a deficiency instead of a surplus. For the twelve months just ended every item of expenditure except that upon the Indians showed an increase. The increase in the civil expenditure was £1,915,000, the army took £1,390,000 more and the navy £1,531,000 more, in round figures. That is to say, stated in pounds, the outlay on the army and navy together amounted to £42,817,000. This is not quite up to the British standard, but Mr. Roosevelt is on the way, and diligently doing his best. The next largest increase, as is fitting in the year before the Presidential election, took place in the outgoings for pensions, which came to $144,146,000, or £28,823,000, an increase of £1,004,000 on the preceding year.

According to the Treasury statement issued at the beginning of the present year, there was an increase of £37,000,000 in the money in circulation on January 1 last compared with January 1, 1907, and this figure does not include the Clearing House certificates and other devices employed by the banks. Altogether the active circulation at the beginning of the present year is put at $3,079,000,000, or, say £616,000,000, but there was a decrease of $44,051,000 or £8,110,000 in the gold coin and bullion in active circulation. Gold certificates, however, rose by $126,267,000 or £25,254,000. There was also an increase in the standard silver dollars in the hands of the public, but silver certificates remained practically the same—$467,731,000, or £93,546,000. Leaving aside subsidiary silver, in which, however, there was an increase of nearly $11,000,000 at $135,000,000 (£27,000,000), and greenbacks, which fluctuate comparatively little but were $3,367,000 up at $345,275,000, or £69,055,000, we find the notes of the National Banks swollen out by no less than $94,000,000 (£18,800,000) to a total of $679,035,000, or nearly £136,000,000. Altogether, therefore, of the outstanding money, amounting to £616,000,000 on the 1st of the current year, only £271,000,000 was represented by gold coin and bullion and gold certificates. But this does not hinder Congress from labouring to provide the country with still more paper.

Carnegie Steel Trust profits fell off by more than £2,000,000 in the December quarter, and are returned at something like £6,400,000 compared with £8,761,000 in the September quarter and £8,350,000 in the December quarter of 1906. And they must still be going down.

Passing Events.

The Berlin correspondent of the *Morning Post* told us at the end of last week that the appeal issued by the Prussian State Bank for subscriptions to the new loan has proved "a veritable fiasco." He says this upon the authority of the *National Zeitung*, which very frankly points out that the public has not responded as was hoped for to the direct appeal made to it. The State Bank ignored the great private banks, and set about doing the whole business direct with the investor "off its own bat," as we should say, with the result that the amount subscribed falls, as we stated a week ago, far short of the £15,000,000 necessary to pay off the Exchequer bonds shortly to fall due. So there is nothing whatever provided for the further floating debts of this description amounting to another £7,500,000. The public, in other words, did not feel in the least attracted by a 4 per cent. loan which was to become a 3½ per cent. one at no very

distant date, and one would like to know what the Berlin Government is going to do now. For one thing it will have to raise the rate of interest offered to subscribers, and even then the necessary money may not be easily forthcoming because Germany has an industrial crisis and German banks are locked up in enterprises that may be said to stretch almost from pole to pole, enterprises many of which are not yet bringing any return whatever to their projectors and financial providers. The "crisis" in Germany has not disappeared any more than in the United States with cheaper bank credits.

A reduction took place last week in the numbers in receipt of relief in India, the total being 313,996. Of this number 137,397 were on the relief works in the United Provinces, and 104,456 in receipt of gratuitous relief, also in that province. The demand for State relief is increasing in the native States of Baghelkhand, and the number on the works was 58,102 as against 4,446 receiving gratuitous relief there. Famine does not appear to have developed much further in Orissa, although 6,747 people are gratuitously helped there, with, however, only 446 on its relief works, but the area of distress is extending and more petty crime is manifesting itself here and there. The rain which fell between the 10th and 12th inst. in Northern India improved the prospects of standing crops, but reduced the demand for labour to some extent, owing to the cessation of irrigation work. Prices, however, have ceased to rise, and in some instances have very slightly fallen in several provinces. Thus the prospect is still dubious, and must remain so for many weeks yet.

A week ago an interesting estimate of the copper position was published by the *Morning Post*, and is worth referring to now, were it only to repeat the view of the writer as to the probable course of prices for the metal in the immediate future. He points out that the average price of copper has been £59 per ton for the past twenty years, in spite of the fact that for the last few years a group of unscrupulous speculators strove to corner the supply, and succeeded in driving the price up nearly to twice that average. From this, and from the fact that production has so exceeded consumption as to cause a heavy accumulation of stocks in the hands of the leading operators, it is pointed out that there seems no reason why consumers should have to pay more than £50 per ton for a considerable time to come. Thanks to the imperfect liquidation which took place in the United States at the end of last year, the power of the copper ring has not been broken sufficiently to force them to part with their hoards at any price. On the contrary, they are still engaged in propping the market, but their power has been crippled, and if consumers carefully abstain from buying more than is required for immediate consumption, if also they hunt about for scrap copper of which there is an increasing supply coming into the market, they will soon get the metal of the combination on their own terms in spite of some reduction in the output of American mines. All the world is not reducing its output, but the contrary.

A recent issue of the *Anglo-Chilian Times* contains some particulars with regard to the attitude of the fire insurance companies in Valparaiso. It is mixed up with a local story of perjury into which we cannot enter, but the different treatment meted out to those who suffered from fire after the Valparaiso earthquake compared with that bestowed upon sufferers from a like cause in San Francisco ought to be emphasised and insisted upon. In Valparaiso the foreign companies have flatly refused to acknowledge any claim, although some of the native companies have done so and paid up. In consequence of the refusal of the other offices 500 actions have been begun against them, representing sums aggregating £1,000,000, and already the companies have spent upwards of $1,000,000 in defending their suits. Would it not have been better to have given this money to the sufferers? A composition payment would certainly have been accepted by most of them, and have left little or none of that ill-feeling now directed against foreign fire offices in Chili, and sure to inflict upon them permanent injury there. Altogether 30 companies are involved, half of them Chilian, the other half foreign. The Chilian companies have made arrangements to pay 50 per cent. of the demands made upon them, but the foreign companies have stood out and deserve to suffer for so doing.

What is the matter with Protection in Germany? The prophets of that system of workhouse recruiting are never tired here of telling us how prosperous German and American industries are. There were no unemployed people in Germany, a correspondent wrote to assure us some time ago, and everybody there is happy with their old age pensions—provided at their own cost, it is true—better fed, better clothed, better housed than they are in our Free Trade afflicted land. There must be something not quite complete about this picture, for Reuter's and other agencies are now bestowing upon us sad stories of 60,000 people without employment in Berlin, hungry mobs, riots in the streets, and shootings by the police, and general uproar. One sensational newspaper heads its account "Pools of Blood." There does not seem to have been any reason why a single individual should have been hurt, but an armed police is always prone to misunderstand the symptoms in an unarmed crowd, and takes to murder as a first step in restoring order. What we want to know is why Berlin or any other German city should have any unemployed trouble at all, and if Mr. Chaplin or some of the other of the great Protectionists would kindly enlighten us on that point we should be very much their debtor.

The members of Lloyds Bank must begin to think that our advertising agent is, like the Editors, an anti-tariffite, who "gets at" the "copy" and puts blunders into the paper when any mention is made of the bank's affairs. We hasten to assure them that it is not so, and that the blunder in last week's notice of the annual report, whereby it was made to appear that Lloyds Bank held its Consols at 95 instead of 98, was not malice prepense, but a pure slip of the tongue or the typist left uncorrected by the proof reader. The directors state that all investments of the bank stand in the balance-sheet at or below market value, and we never even thought of questioning that statement. The analysis in The Investors' Review gave full intimation of the fact. None the less are we sorry that any mistake should have been made, for it is a long time now since Consols stood at 95, and our joint-stock banks, Lloyds included, appear to have met the difficulties induced by the fall in price quite manfully and fairly.

In their always interesting review of the insurance share market for the past year Messrs. Maclean and Henderson, of Stirling, have much to say about the position of the fire companies, the most reassuring fact mentioned being the profitable character of the business done in San Francisco last year. They remind us that the total loss by the 243 offices involved in the San Francisco disaster came to about £35,102,000; that the claims numbered about 150,000, and that of the above total the nett loss ultimately paid, amounting to about £34,650,000, fell upon 35 foreign offices, mostly British. The fire more than extinguished the entire underwriting profits made by the American offices during a period of 47 years. It will be a long time we trust before fire insurance offices have to encounter such another calamity, and in the meantime they will doubtless do their best to fortify themselves against similar dangers.

It cannot be said that the affairs of Frederick Sage and Co., Limited, have been advanced much by the result of the poll taken on Tuesday, and yet perhaps the strength shown by the opposition—105,009 votes for the amendment against 153,624 for the board's motion—may lead to a compromise that will prevent the company from going to wreck and ruin. Mr. Frederick Sage in his speech admitted some of the facts set forth by Messrs. Crisp and Debenham, but

clung to the policy of establishing branches which has done so much to destroy profits. Therefore the opposition will have to back up the new members of the board and force a change which will stop the waste of money in South Africa, in Berlin and Manchester, and concentrate the energies of the management upon London. Within the United Kingdom it is certainly unnecessary to establish secondary centres. The business is so good a one at bottom that it ought not to be thrown away by persistence in a course so fertile in disappointment and loss.

We have not intervened in the discussion which has been hot on the Stock Exchange over the proposed new rule 75, because it was a disappointment to us to find any such reactionary step in contemplation. That there should be jealousy between the broker and jobber, especially in times like these, when it is difficult for the majority of Stock Exchange members, whether of the one class or the other, to pick up a living, is a matter of course, but we do not think that harmony will be restored by the adoption of a rule which seeks to cut off the jobber from doing outside business direct with country brokers. Modern tendencies are all for removing hindrances to business, and although we admit fully that the jobber is a most serviceable man in many markets, we fear that great majority of securities would be better, that is to say more justly, dealt in if the market were an open one, and if all members of the Stock Exchange were free to deal with their customers on the same basis as outside houses or country brokers. It will have to come to that one day, and if this new rule is confirmed next Monday it can only signalise the low watermark of reaction. Opposition to it will be stimulated, and may gather such force as to compel radical, perhaps even dangerous, changes in other directions at no distant day.

If the shareholders of the Chartered Company were not whipped into a proper frame of mind on Thursday, it could not be because they had not Birchenough! They had a grand time altogether, and Mr. Bourchier Hawksley must have enjoyed himself immensely. Somebody who heard his speech felt disposed to class him as an Irishman; he was so humoursome and jolly, so full of hope about Rhodesia. It is a grand country, one of the most glorious on earth, every orator said, from his Grace of Abercorn downwards. All it wants is population, crops, markets for the crops, tourists and federation with the neighbouring states of South Africa, not yet chartered companies. Some of the 14,000 or 15,000 whites already settled and remitted to in this splendid Empire in embryo have been stupid enough to grumble at the company, their foster parent or patent automatic milker, but that will all be remedied soon, and the company does not want anything from the poor British Government, oh, dear no; never did, wants only a population of its own, and surely this wish can be gratified forthwith from the ranks of our unemployed among company promoters, hungry members of the Stock Exchange—nice fellows all, and willing to work—brokendown millionaires, disengaged politicians, and penniless younger sons of the peerage. We offer the hint gratis to the company, and hope it will soon get the money needed to send away these classes of the needy in their thousands. We can really spare most of them and the money also to start the produce-broking business.

The Week in Mines.

We can afford to keep the mining story short this week, as very little of interest has presented itself and dealing has again shrunk to lamentably small proportions. We fear the new year boomlet has already come to hand, and once more market leaders have discovered that, despite the most frantic exertions on their part, the public absolutely declines to dance to their tune. It looks as though outsiders have done with the Kaffir Circus and all its discreditable surroundings for ever, and are determined to leave the load on the backs of the supporting groups until it eventually crushes them, as it will do some day, perhaps soon. Whatever support was accorded the market during the past week came from Germany and France, but, all told, it amounted to very little, and as no one on this side had the heart to do a stroke the tendency was inevitably the wrong way. There is no money for Kaffir shares, either existing ones or new issues, and we cannot hear a word about the reception accorded to the Randfontein issue, from which you may draw your own conclusions. The only certain thing is that Mr. Robinson took ship to South Africa directly it was announced, in order, presumably, to get clear of the storm, and it looks as though very discouraging news will await his arrival. But Robinson has said that he would advance the companies a large sum of money, and here, sure enough, is his opportunity. It is unnecessary to describe the price fluctuations of the past few days. As a rule, they were quite unimportant, and the changes on balance are slight, although mostly adverse. When Germany or Paris supported the favourite counters picked up a trifle only to fall again as soon as the buying stopped, which it did very soon. The Bonanza Company announces that operations ceased last Saturday, and that the sale of the property and plant will take place on the 30th inst. This intelligence had, of course, been fully expected, but the shares were marked down to about 4s.

Land, Finance, and Rhodesians.

The position of the Oceana Company has caused dealers anxiety for some time, and when Henderson's Transvaal proposed a reconstruction a good many came to the conclusion that the other concern would not be long in following the example. But the company promptly denied the rumours current to this effect, and the price which had been down to 7s. 3d., picked up a few pence. It is worth careful note that the opposition to the Henderson scheme referred to in a separate note, caused a sharp rebound in the shares, of which we hope plenty took advantage. The warning we uttered that the turn-up in Welgedachts had absolutely no justification in view of the state of the company's finances has been absolutely justified, because the shares were knocked back to £1 at one time. They are now about 1¼, but you can only buy, not sell at the figure. An offer of any quantity would, in all probability, quickly reveal the unstable character of the market. Other Land and Finance things were also inclined to go back, and but for the fun provided by the Chartered situation the House would have been in very low spirits. Of course, it is quite well known that the tottering Chartered structure must be very near final collapse, and that a desperate effort would be made to bolster things up for a little while longer. So the wits set to work to think of possible plans for once more raising the wind. We suggested "participating certificates," the City editor of the *Morning Post* hinted at "profit sharing notes," and one genius started a story that the Government would lend any amount of money at 3½ per cent., or, in the alternative, guarantee an issue of debentures so as to help along a colonisation scheme, relieve the "distress" at home, and in a roundabout way give the Tariff Reformers one in the eye. All of which added much to the gaiety of nations and incidentally helped Chartered shares down to 13s. 9d. It was naturally expected that the special meeting on Thursday to hear an account of the wanderings of the commissioners who went to Rhodesia to see things on the spot would be seized as a good opportunity to say something about the cash necessities, but when this was denied some bears scrambled in and the price rallied to 15s. For the rest, the Rhodesian market possessed no interest, and things closed dull after Tanganyika's had been a bit better.

Diamond Shares.

One or two incidents have sufficed to keep the Diamond section just alive, but dealers did not get wild with enthusiasm when a notice was posted in the House intimating that the postponed Premier dividend would ultimately be payable to share-

holders registered at the close of business on January 31. So after that date the shares will be marked *ex* a dividend that may be paid anywhere within the next year or so. Truly a ludicrous situation, and it will be interesting to see how much the market deducts. We are glad to note that the leading Paris papers, notably the *Temps*, has expressed its opinion in no measured terms of the scandalous business concerning this dividend postponement, and openly accuses certain parties of running up the shares and unloading an hour or two before the news became known. It is one of the most disgraceful episodes we have encountered for some time, but quite in keeping with South African financial methods. The latest news in connection with the "arrangement for restoring confidence to the diamond market" is that the Premier Company will shut down one mill, one magnetic separator, and part of the washing gear. It is estimated that this will result in a monthly reduction of the output by 30,000 carats. At one time the shares of the company went up to 6⅜, and De Beers touched 14¼, but the rally did not last, and the fractions were soon lost in each case. Laces were marked down 9d. to the exhilarating price of 1s. 3d. on a cable stating that the mine has been shut down owing to the impossibility of selling the output in the present state of the diamond market. Why not join the Diamond Syndicate?

West Africans and Australasians.

The Jungle was not exactly an animated spot, but here and there a share found favour. Broomassies were run up to 14s. 6d., a figure which was not quite maintained, and some took a fancy to Prestea Block A, Offin Rivers, and Wassaus. There was quite an encouraging rally in Broken Hills, assisted by the declaration of one or two unexpected dividends. The Colony was once more in buying mood, and as local dealers were inclined to follow the lead business was better than for some time. Shares were not in large supply, and if the recovery is maintained some of the numerous bears may be forced in. Westralians, idle as ever, showed distinct dulness, Boulder Perseverance suffering from the drop in ore reserves disclosed in a cable from the general manager. New Zealands were dull.

Copper and Tin Shares.

The market for copper metal started briskly, and the various shares were not slow in following. Rio Tintos went to 69, Anacondas to 6⅞, Great Cobars to 6½, Lyells to 30s., and so on. The early gains, however, were soon followed by a setback owing to the loss of the entire initial rise in the metal, Tintos receding to 67⅝, Anaconda to 6 1/16, and Boston to under 3. There was a pick up from these low figures, and a little demand was noticeable for some of the Australian rubbish shares. The market would like further news about the Mount Lyell developments. The directors were visiting the property the other day, and cabled that the position was satisfactory, but that does not carry things very far. After a sharp run up tin relapsed steadily, and a few share prices also eased off.

Miscellaneous.

In the Miscellaneous section the American Group kept pretty steady, and Camp Birds had a rise on the December profit of £22,912, which compares with £20,599 in November, and the increase of quite £2,000 from the Esperanza profit eventually helped that company's shares. El Oros and Tomboys showed firmness, but the Le Roi things moved opposite ways. Siberian Proprietary were run up to 2⅛, but relapsed again, while most of the Indians were inclined to go better. Pekin Syndicates were flat, and the market is in the dark as to the ultimate effect of the return of the Shansi concession to the Chinese authorities for a payment of £400,000, half the amount to be paid on February 21, and the balance in three equal annual instalments commencing May 19 next year. There is talk of capital rearrangement, and dealers would like to hear something definite.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No tuc et shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Mine Drills on the Rand.—This subject is still the cause of no end of excitement among the magnates and others, and for the present we can do no more than express admiration for the energetic way in which all concerned are facing the problem. There seems to be no doubt that the Gordon drill is the best appliance of its kind so far invented, but nothing is so good that it cannot be improved upon, and Mr. Reyersbach, of Eckstein's, has thrown out a challenge to the world's manufacturers to produce a perfect drill by January 1, 1909, and to send out six or nine drills to work under ordinary mining conditions for four or five months, and to be supervised by a committee of experts. He guaranteed fair treatment to manufacturers (an enormous gain), and a prize of £1,000 for the best implement. Following this intelligence came an announcement that the Government of the Transvaal is co-operating in the contest, and proposes to offer an extra prize of money, besides allowing drills for the competition to be imported free of Customs duty and railway freight.

Henderson's Transvaal Reconstruction.—Before this note appears in print the meeting to consider the reconstruction scheme put forward by the directors of Henderson's Transvaal Estates will have been held and some kind of decision arrived at. We shall refer to the matter again next week, and are very glad to see that a vigorous protest has been entered against the board's proposal. As we pointed out when dealing with the scheme in our last issue, there seems to be no urgent need of the drastic measures suggested, and still less for the method by which they were to be carried out. Unfortunately, the dissentients are all pulling different ways, but the first to enter the field against the directors was Mr. Henderson himself. The differences between him and the board are evidently of long standing, but there can be no question that the policy of locking up so much of the company's resources in the Tweefontein Colliery, against which Mr. Henderson protested, is largely responsible for the present financial distress. Personal matters referred to in Mr. Henderson's circulars to the shareholders we need not touch upon, but it appears that a shareholder intimated his intention of proposing the compulsory liquidation of the company, while two others gave notice of intention to propose the appointment of a committee of investigation. These matters were referred to in the inevitable rejoinder from the board, but put on their defence all the directors could do was to point to the small holdings of these gentlemen and tell the shareholders that Mr. Henderson, who once held over a million shares, now possesses only 10,011. We believe this fact was already quite well known to the proprietors, and it would be good to learn the directors' individual holdings. Next comes a circular from Mr. Frank Hurst, who wants an independent investigation on his own account, and evidently does not wish to truck with Mr. Henderson, but as Mr. Hurst is the official jobber in the shares he can be safely ignored. The last word was a letter from Mr. Geo. A. Murray, whose alleged small shareholding was the directorial "case" against him, in the course of which he pulverised the board's contention that this had any bearing upon the question under consideration. There we must leave the matter for the moment as the meeting (held yesterday) took place too late to permit further comment until next week.

South-West Randt Mines.—It is indeed a tale of woe that the directors of this unhappy venture have to tell the shareholders in the report covering the trifling period of three years to September 30 last. The meeting will take place on Wednesday next, and the delay is due to a variety of reasons already explained to the shareholders in sundry circulars, one of which was the anxiety of the directors to wait until the chairman had returned from his visit to the property, and the works inaugurated by him had shown some tangible result. As far back as April last shareholders were notified of the purchase of a 10-stamp battery and complete cyanide and slimes plant, and were also informed that crushing would probably commence at the end of June. However, it was not until August 22 that information was given of the preliminary runs of the machinery. Unfortunately, the results obtained from the first crushings were far below anticipations due, so it was said, to general causes incidental to the inauguration of a new plant. Great difficulty was experienced in securing the services of a capable mine manager, and operations were much delayed by scarcity of water. The local manager declared that the mine was capable of more than paying expenses, and with additional stamps could be worked much more economically, leaving good profits on each crushing. So in order to effect this quickly the directors decided to ask the shareholders to take up some debentures, but the response was so inadequate that none could be allotted. The finances not permitting the purchase of the plant asked for there was nothing for it but to close down the mill, and the directors have been compelled to authorise the temporary suspension of all work on the property. Thus matters are now at a standstill, and operations cannot be resumed unless more money is found. Various methods of raising the wind have been discussed, and to avoid the expense of reconstruction the directors have decided to recommend the creation and issue of 292,260 priority shares of 1s. each. These will be entitled to have all the profits applied first in paying a preferential dividend equal to the nominal value of the priority shares, and next in payment of 90 per cent. of all further profits with a preferential claim upon the

assets in the event of a winding up to the extent of any deficiency in the preferential dividend and to 90 per cent. of the surplus. Holders will be entitled to two votes for each share. This means the practical annihilation of the present share capital and any proprietor desirous of keeping an interest worth having in the company must take up his proportion of priority shares. During the 80 days that the mill was running to the end of September 4,027 tons were crushed for gold valued at £2,296, while since October 1 2,953 tons yielded £1,580. The balance-sheet is, of course, in a fearful state, and, including the debit for the three years under review £7,309, and depreciation on stocks £7,848, there is a total deficiency of £53,142.

TASMANIA GOLD MINING COMPANY.—The directors of this undertaking do their best to minimise the very disappointing state of affairs revealed in the latest report, but it is easy to see that the prospects of the mine fulfilling early promise are extremely poor. The company has only been in existence for a little over four years, and during the whole time the returns have steadily diminished in value, despite the introduction of new extraction processes, such as the cyanide works. Much is made of the unfortunate flooding of the mine in 1906, but that cannot be considered a sufficient explanation of the poor results for the twelve months ended September 30, 1907, although the event was doubtless a severe hindrance to development work, and probably threw the general operations a good deal out of gear. It is, however, encouraging to learn that the steps taken to cope with any future water troubles are considered to have practically removed all danger of floodings. Output of ore during the period under review was 59,096 tons, of which the battery crushed 58,339 tons, yielding 23,434 ozs. of gold. The chlorination works treated 2,326 tons for 4,326 ozs., and 30,103 tons cyanided gave 2,594 ozs. Including 158 ozs. from other sources, the total production was 30,512 ozs., and in addition 2,954 tons of concentrates, flue dust, &c., estimated to contain 2,286 ozs., have been roasted and stacked for future treatment. Sales of gold and stock on hand valued at £1,102 amounted to £129,894, and other items gave £224, making £130,118 in all. But the expenditure at the mines and in England was very heavy at £112,455 and left only £17,663 as the actual profit on operations. Of this £911 had to be paid for income-tax, there was a loss on the railway department of £736 owing to some exceptional expenditure, and £17,629 had to be allowed for depreciation, so that, instead of a profit there is a deficiency of £1,613. A good deal of development work was accomplished in the twelve months, with varying results, and the reserves of fully-developed ore amounting to 40,852 tons, are not very startling, especially as the superintendent talks of increasing the output this year. With this idea in mind, he recommends that the battery of 65 head of light stamps should gradually be replaced by 40 head of greater weight. Authority has been given for the purchase of 10 head by way of a beginning, but what is the change going to cost? In the reduction works, as the result of careful experiments, improvements have been effected in the treatment processes, which are likely to prove of great benefit in the future, and assuredly something of the kind is badly needed. The company has bought the North Tasmania mine for a small sum, and the directors are taking steps to secure adjoining leases, so that the continuity of the reef both laterally and in depth in the company's ground may be permanently provided for.

SOUTH KALGURLI GOLD MINES.—It must be admitted that the operations of this well-known West Australian company for the year ended September 30 were distinctly disappointing; but everything, good and bad alike, is clearly set down, and no attempt is made to make things out better than they are. Short tons treated were 99,887, which yielded 33,251 ozs. of gold and 2,982 ozs. of silver, having an aggregate value of £141,043. Interest, dividend, &c., gave a further sum of £1,505, making £142,795 in all, but expenditure at the mine was no less than £97,585, quite apart from outlay on shaft-sinking, development, and equipment £15,255 and depreciation £8,808. Other charges of various kinds brought the total expenditure to £125,156, leaving the nett profit at £17,639, a very disappointing sum. However, the directors continued to pay two dividends aggregating 1s. 6d. per share, to write off £2,500 from mine development prior to the period under review, and to carry forward £570 against £431 brought in. This must be considered a very poor result, and is mainly due to the drop from 35s. 8d. to 28s. 3d. in the average yield per ton. At times the return was as low as 24s. 6d., but the general managers, Messrs. Bewick, Moreing, and Co. are of opinion that the falling off is of a temporary nature only. Working costs unfortunately went up by 7.87d. per ton, principally due to abnormal repairs to the plant which became necessary. An extension of the plant by one Krupp Ball mill and two Merton furnaces is under way, and it was expected that their erection would be completed early this month, the total cost being estimated at £4,800. This increase was called for to overcome the difficulties experienced in the treatment of the Morty (or Perseverance) ore, which is considerably harder and contains a much higher percentage of sulphur than the main lode. Development work during the year has opened up a considerable quantity of payable ore, although no fresh discoveries of any great importance have been made. The amount disclosed has about kept pace with the quantity treated, and the managers estimate the tonnage in sight at 111,539 tons averaging 7¼ dwts. in addition to 73,527 tons of probable ore worth 6.6 dwts. per ton. These figures compare with 112,000 tons averaging about 7½ dwts. at September 30, 1906, and 105,885 tons worth 7¼ dwts. per ton on March 31 last. The financial position is moderately good, and while the mine development account is somewhat high, it is satisfactory that all fresh outlay is being charged to working expenses.

GREAT BOULDER PERSEVERANCE.—A cablegram from the general manager states that the estimated ore reserves at December 31 last were 182,266 tons of 9 dwts. 10 grs. and 279,352 tons of 6 dwts. 2 grs. Total tonnage is 461,618 tons of an average assay value of 7 dwts. 10 grs., while the probable ore in reserve, payable, is 160,000 tons. At the end of 1906 the reserves were 383,410 tons of an average value of 8 dwts. 17 grs. per ton, besides 226,192 tons, value 6 dwts. per ton.

PENN-WYOMING COPPER COMPANY.—This company's undertaking is situate at the Grand Encampment, Carbon County, Wyoming, U.S.A., which should be attractive enough for anybody; and Mr. Arthur E. Pettitt, of Messrs. Poore, Pettitt, and Stewart, has been on a visit of inspection to the property. He arrived there on September 19, and remained in the district until October 7, and we are now favoured with a report of his impressions and conclusions. The Penn-Wyoming is a proprietary company, owning the stock of no less than 11 subsidiary companies, besides timber rights and lime and quartz quarries. There are two mines and companies owning an aerial tramway, smelting works, water rights, waterworks, electric light works, town sites, a coal mine, a transport business and a railway. Mr. Pettitt's report is fairly voluminous, and we can only spare space to refer to his general summing up. At the Ferris-Haggarty mine, the more important mining proposition, a considerable amount of high-grade ore is exposed, he tells us, but this is sufficient only to supply the smelter for a limited period, and considerable development work must consequently be undertaken and persistently pursued to supply the smelter with its requirements. As to the Doane-Rambler mine, the best that can be said apparently is that there are indications of high-grade ore bodies, and development work should be at once continued and vigorously pushed forward. Within a period of, say, six months it should be possible, if the developments prove as satisfactory as anticipated, to put this mine in commission to supplement the amount of ore now being supplied from the Ferris-Haggarty mine. The subsidiary companies are declared to be well equipped and well managed, "giving all facilities for expeditious and economical treatment of the ores, not only from the company's mines but also from the independent mines of the district, subject, of course, to the construction of the necessary transport facilities from the latter." Mr. Pettitt concludes by urging upon the management that development work and the systematic blocking out of ore reserves is essential to the well-being and continued success of the company, and the London secretary announces, under authority, that the directors approve and adopt the various recommendations. They were outlined and discussed with Mr. Pettitt at Chicago, and, acting on the advice there given, a sum of $36,000 was expended last quarter on development work alone.

EL ORO MINING AND RAILWAY.—A circular to the shareholders recalls the fact that at the last meeting the chairman suggested that for the purpose of adjusting the question of the ownership of the veins encountered on the 1,000 ft. level, it would be wise to set aside a strip of the Somera claim adjoining the west boundary of the El Oro property, and to operate all the veins contained therein except the San Rafael for the joint account and benefit of the El Oro and Somera companies. It is, however, now considered a better plan to reunite the two companies, and a general scheme of amalgamation will be submitted as soon as possible. Briefly, the terms are that five £1 El Oro shares, fully paid, should be exchanged for every sixteen Somera shares, 5s. paid.

Critical Index to New Investments.

TRANSVAAL TREASURY BILLS.

The Agent-General for the Transvaal announces that tenders will be received at the Bank of England on the 28th inst. for £500,000 Treasury Bills to be issued under the Transvaal Loan (Guarantee) Act, 1907. The bills, payment of which at maturity is guaranteed by the Imperial Treasury, will be in the usual amounts of £1,000, £5,000, or £10,000. They will be dated February 1, and will be payable at six months after date, viz., August 1, 1908.

AGUA SANTA NITRATE AND RAILWAY COMPANY.

In addition to a railway connecting the port of Caleta Buena with important nitrate fields in the Cantons of Negreiros and Huara, this Chilian undertaking owns four nitrate grounds estimated to contain upwards of 42,000,000 quintals of nitrate. These grounds are at present producing on the average about 1,500,000 quintals per annum, which is the full quota allowed to them under the combination, and at this rate of production they have a life of upwards of 28 years. Since its formation in 1890 the company has been prosperous, and during the last ten years it has spent over £400,000 out of profits on improvements and additions, with the result that it has properties and assets valued at £1,015,844 after deducting

depreciation and amortisation funds. The liabilities other than the share capital of £600,000 on December 31 amounted to £272,903, leaving a surplus of £742,941. In 1896 an issue of £200,000 in first mortgage debentures was made of which all but £69,000 have been repaid, and the balance outstanding is repayable by annual drawings, the last instalment falling due on July 1, 1911. Money is now wanted to enable the company to repay advances obtained from its bankers for improvements and additions to the property, and an issue of £100,000 5 per cent. mortgage debenture bonds has been created. These were sold to the company's agents in England, Messrs. Balfour, Williamson, and Co., and were offered by them for subscription at the price of 98½. The bonds are secured by a first charge on the Valparaiso and Primitiva Nitrate properties and by a second charge on the other two properties and the railway pending the repayment of the balance of the previous issue. They are redeemable by annual drawings at par at the rate of £12,500 per annum commencing on July 1, 1912, and the company may accelerate this redemption, but only by drawings at 103 or by purchase up to that figure. Nett profits, after providing for debenture interest and redemption, are given in the prospectus for the five years to December 31, 1906, and as they show an average of £154,855 per annum the bonds look an attractive purchase.

Vryheid (Natal) Railway, Coal and Iron Co., Limited.

A concession for a railway from Vryheid to Hlobane Colliery, about 17.6 miles in length, with the right to extend for a further 20 miles to or near Purys, the Hlobane Colliery itself and an adjoining coalfield, comprising 41,000 acres, and options over farms of 18,000 acres, containing iron and manganese deposits, near Purys, make up the properties which this company is formed to secure. The railway, which is already under construction by the Natal Government, is a continuation of the Glencoe-Vryheid line forming part of the Government railways, and cost the vendor £18,000 for the concession and construction work. He has spent another £140,000 in opening up and prospecting the coal, iron, and manganese deposits. That gentleman undertakes in addition to pay the preliminary expenses, estimated at £25,000, making £183,000 altogether, but he is by no means modest in calculating the profit on his outlay, as he asks £305,000, payable £175,000 in ordinary shares and £130,000 in preference shares or cash. The total capital is £500,000 divided into 325,000 7½ per cent. cumulative participating preference shares, entitled to half the surplus profits after 7½ per cent. has been paid on the ordinary shares and 175,000 ordinary shares, which are to be entitled to a cumulative dividend as from December 31, 1909. Development work on the colliery has been carried to such a stage that it should be in full work shortly after the railway is completed, which the directors expect will be before the end of the year. An output of 600,000 tons per annum is looked for, and it is estimated that, taking the selling price at Durban at 15s. 6d., the nett profits should amount to at least 3s. 6d. per ton or £105,000 per annum. This would leave a surplus of £67,500 after paying 7½ per cent. on both classes of shares, which would give a margin for the development of the iron and manganese deposits and for the creation of a reserve fund. It must not, however, be forgotten that these figures are based on nothing more tangible than a belief that they can be realised, and, under the circumstances, the purchase price seems monstrously dear.

Langkat Sumatra Rubber Co., Limited.

This company has been formed to acquire three adjoining estates in Upper Langkat Sumatra having an area of about 2,050 acres, and has a capital of £75,000 in £1 shares, of which 31,500 shares have been issued to the vendors and 31,000 were offered for subscription, the balance being held in reserve. The purchase price for the estates, buildings, machinery and coolie contracts is £48,500, payable as to £17,000 in cash and £31,500 in shares. Out of this the Rubber Estate Agency for its services receives £2,000 in cash and £1,500 in shares, together with half of an option granted to the vendors to take at par during five years 10,000 of the reserve shares. There are about 508,000 coffee bushes planted on the estates, of which 281,000 are now in bearing, and it is stated that the crops for the past four years have averaged over 2,300 cwts. per annum. In addition there are over 152,800 rubber trees planted, and the directors estimate that if the Para rubber trees yield 1 lb. of rubber per tree annually, and they can sell at a profit of only 1s. 6d. per lb., they should be able to pay over 25 per cent. per annum from this source alone when the trees already planted are in bearing. Mr. Cleveland Harrington, manager of the Tjigembong Rubber Estate, Java, who has inspected the estates, calculates that the crops for the current year should amount to 2,700 cwts. of coffee and 3,200 lbs. of rubber, and that these should increase to 3,600 cwts. of coffee and 105,000 lbs. of rubber in 1911. Nothing, however, is said regarding the cost of production, and a good deal depends on that as to whether or not the company will prove successful.

TRADE AND PRODUCE.

Wheat.—Demand has been comparatively small, and markets dull with falling prices for both spot and futures, though the latter recovered a little towards the end of the week. English wheat has been in fairly liberal supply, but sellers had to take about 1s. per quarter less money for it, at which price it was in good request. Farmers' deliveries last week amounted to 69,181 quarters, averaging 35s. 5d., against 72,207, averaging 26s. 1d., in the same week of last year. Our supplies from abroad though continuing on a liberal scale are not excessive, last week's imports amounting to 290,850 quarters, against 341,205 in the same week of last year; but the quantities of wheat and flour on passage is higher this week than last by 475,000 quarters at 3,135,000 to the United Kingdom, and by 90,000 quarters at 1,110,000 to the Continent. American markets were fairly well supported throughout most of the week, but the final turn was not so steady.

Wool.—As was generally expected the London sales of colonial wool opened with an advance in prices for all except inferior classes, consequently markets have strengthened a little, the prices asked were more readily given, though there are still some who will hold off till the end of the sale to see if the higher basis will be kept up. In the yarn market business is active and prospects considered to be encouraging, and consumers are now beginning to place fairly large contracts, though still with considerable caution, For manufactured goods reports are not so bright. Huddersfield trade drags, shipping business has declined, and both from here and from Leeds is of an indifferent order. Prices are firm so far, but there is still an idea that wools will fall and bring about a lower basis for finished articles.

Cotton (from our Manchester Correspondent).—The general tone of our market during the week under review has been quiet and sellers have met with very little encouragement in any direction. Considerable fluctuations have occurred in the price of American cotton with a tendency towards higher rates. The wages dispute has scarcely affected the market. The trade all round has expected a settlement, and there has been very little anticipation of a stoppage of the spindles on Monday next. Shippers of piece goods have not been eager to place orders of any importance. Here and there small sales have occurred to meet actual requirements, but speculative buying, at the moment, seems to be quite out of the question. Our chief consuming markets of the East have been slow, very litttle having been done for either India or China. Shirting makers have met with offers, but in most cases very little can be done with them. The near Eastern markets remain dull and any improvement in the outlook is slow. Home trade buying at the present time is being restricted and is carried on from hand to mouth. Retailers are not placing orders on so large a scale as twelve months ago. Lower rates are being looked forward to. More looms are going on short time throughout Lancashire. Burnley printing cloths have moved off slowly, considerable difficulty being experienced in obtaining adequate rates. Makers of T-cloths and Mexicans have done badly. Stocks tend to accumulate in first hands. Home trade American yarns have only met with a small business, and spinners are not so difficult to deal with as some time back. The margin in 36's twist is much narrower than a month ago. Wefts are also increasing in supply. Shipping bundles have not commanded much attention. Some offers have been mentioned for the East, but in most cases these have been too low to be put through. Bolton yarns made from Egyptian cotton have been in slack demand. Margins are slipping away, the demand from users being unimportant.

Sir Jacob Behrens & Sons state that during the past week further attempts have been made by the "bull" party to raise the price of American cotton. On Tuesday last, at midday, March-April delivery touched 6.19 in the Liverpool market, but closed at 6.08, and has in the meantime remained at about this figure. The

market is in the hands of speculators, who receive little outside support, but they appear to be very sanguine about the future. The South offers cotton in small lots only and at full rates. Egyptian cotton keeps very dull, but quotations of "fully good fair" have advanced $\frac{1}{16}$d. per lb.

COAL.—The depression that so many industries are suffering from has not so far been very keenly felt in the Coal trade, but now seems to be getting more hold upon it. Scotch and Welsh trade are both showing weaker prices. There is no "slump," but according to the *Engineer*, week after week brings forward the decline from 3d. to 6d. per ton in the price of best steamers and lower prices generally. Shipments continue large as a rule, though from the Scottish ports they are lower than at this time last year. House coals keep firm and in the North of England trade prices are fairly well maintained. Exports from the Humber are restricted by the weather, but stocks are not accumulating to any large extent.

COPPER.—The market has fluctuated frequently under the speculative reports from America. It opened with a gain of 15s. and rose to £64 10s. for three months metal and £63 15s. for prompt. Then bear realisations and sales set in, bringing cash down to £62 10s., and three months to £63 2s. 6d. Business yesterday was almost at a standstill, but even so prices rallied a little from the worst, and closed at £62 12s. 6d. for cash and £63 7s. 6d. for three months. To-day, however, the market weakened again, and final prices were no better than £62 5s. and £62 17s. 6d.

TIN.—Reports that American interests had made purchases direct from the Straits had a good effect upon the market, and values opened at £2 advance for cash, and three months rose to £126 10s. Later reports of large sales in the East at relatively low prices caused a reaction, and on Wednesday prices dropped to £123 15s. for cash. Yesterday's business was a little better, and prices rose £1 from the lowest for cash and 12s. 6d. for three months, while a further rally to-day sent them up to £125 5s. and £126 2s. 6d.

IRON AND STEEL.—Prices of all classes of pig iron are still on the downward move. Cleveland warrants have dropped 9d. during the month, and they are now lower than they have been for three years. The lower Bank rate has had no good effect upon either iron or steel, and consumers are keeping out of the market as much as possible, as they see prospects of even lower prices. Hematites are in still worse plight. East Coast warrants have dropped 4s. this month, while West Coast are quoted at 62s. net cash. On forward account there is less doing than ever, and unless demand improves very soon more furnaces will have to be put out of blast to keep stocks from increasing more than is absolutely necessary. To prevent them doing so altogether seems impossible without decreasing production to an alarming extent. The steel trade has been doing better in shipbuilding materials, but otherwise is as dull as everything else.

TEA.—Country trade is not yet back to its usual activity, and this, together with the effects still felt of the recent financial stringency, has resulted, so say Messrs. Gow, Wilson and Stanton, Ltd., in markets not being able to absorb all the tea offered, though the quantities are now unusually heavy. 36,435 packages were brought forward in the Indian auction, and of these 34,503 packages were sold on garden account at an average of 8.41d. Fine and finest grades were again the most sought after, the sales of medium and common leaf being less animated. Ceylon importers brought forward 26,372 packages, and prices were firm for all kinds, though the quality was rather poor in many cases. Fine teas were in small supply, and met with a rather better demand. A few inferior leaf teas sold at 7$\frac{1}{4}$d., but most of it did not go below 7$\frac{1}{2}$d., and the average for the entire sale was 8.15d., against 7.86d. in 1907. Of Javas, 2,309 packages sold steadily at unchanged rates.

SUGAR.—Cuban receipts continue small (15,000 against 56,000 against 23,000 tons), and money is easier, but the market shows no improvement. Quotations are slightly lower, May Beet moving from 10s. 1$\frac{3}{4}$d. to 10s. 0$\frac{3}{4}$d. to 10s- 1$\frac{1}{2}$d. to 10s. 0$\frac{3}{4}$d. Evidently with August at 10s. 3d. and the following October-December at 9s. 8$\frac{1}{2}$d., the premium, says Mr. Czarnikow, is considered high enough as long as America is not buying at 88 per cent., while Cuban productions as well as Java exports are uncertainties, precluding exact calculations of possible American Beet requirements for next September or November. Regarding the next Beet sowings, continues the circular, Mr. O. Licht has ascertained that 72 factories up to the present have contracted 5$\frac{3}{4}$ per cent. less area than last year, which, of course, is no final basis for Germany or Europe. It seems, however, that factories generally are, so far, not bidding prices as high as expected, nor sufficiently tempting to farmers, compared with the results obtained from cereals at present prices; besides, in France distilleries are again competing for roots, as alcohol is fully 1 franc higher than last year. Legislation regarding the continuance of the Convention is not placed before the German Parliament yet, though very little doubt is entertained of its ratification. England, in accordance with its free imports declaration, will not join in controlling Russian exports, and some foreign papers are endeavouring to make capital out of this, probably in vain. The German exports during 1st/10th January were 27,926 against 13,966 tons, which is very satisfactory. The official Java exports in December were about 10,000 tons to the West and 80,000 tons to the East, therefore less than the private figures printed a fortnight ago, but still very large compared to the previous December. The East is apparently providing itself with Sugar both for Japan, where a change of duties is expected, and to some extent for India, where beneficial rains have somewhat improved part of the Sugar crop, and may also benefit the buying power of the population. As yet there is very little Indian demand for European Sugar, which according to import table has been quite neglected. The tone of the New York market has become decidedly quieter, as was only to be expected with a larger portion of Cuban factories at work, and though receipts are still small they ought, given favourable weather, to even reach normal figures. Buyers in the meantime endeavour to secure Sugar at lower prices and have managed to reduce February to about 3.80 cents and spot quotations for 96 per cent. Centrifugals to 3.86 cents. Landings in the three ports only came to 8,000 tons for the week, meltings were 25,000 tons and stocks therefore are reduced to 82,000 tons.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and January 18, 1908:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Jan. 18, 1908.	Total Receipts into the Exchequer from April 1, 1906, to Jan. 19, 1907.
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,314,212
Bank of Ireland	—	1,124,702	1,117,275
		6,932,423	10,431,487

Argentine North Eastern. — Traffic receipts for week ended December 20, £3,577, decrease £92; aggregate from July 1, £73,953, decrease £5,819.

Assam Bengal.—Traffic receipts for week ended December 14, Rs. 74,198, decrease Rs. 1,443; aggregate from July 1, Rs. 23,10,074, increase Rs. 1,29,362.

Bilbao River and Cantabrian.—Traffic returns for November, £9,071, decrease £2,123; aggregate from January 1, £100,047, decrease £12,676.

Buenos Ayres Central.—Gross receipts for December £9,952, decrease £1,355; aggregate from Jan. 1, £132,935, increase £10,966.

Canadian Northern Railway.—Traffic receipts for week ended Jan. 14, $137,900, increase $56,600; total from July 1, $5,587,000, increase $1,482,500.

Egyptian Delta.—Traffic receipts for week ended January 4, £6,074, decrease £594; aggregate from January 1, £211,247, increase £18,338.

Lucknow Bareilly Railway.—Traffic receipts for week ended December 21, Rs. 26,787, decrease Rs. 3,315: aggregate from July 1, Rs. 6,52,077, increase Rs. 4,043.

Midland Uruguay.—Receipts for month of December, £6,808, decrease £564; aggregate from July 1, £37,185, increase £2,570.

North Western of Uruguay.—Traffic receipts for Dec., $17,600, decrease $3,304; aggregate from July 1, $121,864, increase $22,

Quebec Central Railway.—Traffic receipts for the 2nd week of January, $13,483, increase $2,927; aggregate from January 1, $24,691, increase $2,792.

Quebec and Lake St. John.—Traffic receipts for Dec. $58,375, increase $6,111, aggregate receipts $658,636, increase $60,713.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended December 21, Rs. 20,188, increase Rs. 2,441; aggregate from July 1, Rs. 5,37,977, increase Rs. 43,688.

Uruguay Northern.—Gross receipts for month of Oct., £2,235, increase £923; aggregate from July 1, £7,502, increase £802.

White Pass and Yukon Railway.—Traffic receipts for week ended January 7 amounted to $2,250.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending January 18, £1,039, decrease £288; aggregate from January 1, £2,523, decrease £1,118.

Cockermouth and Keswick Railway.—Receipts for week ending January 18, £735, decrease £2; aggregate from January 1, £1,829, decrease £176.

East London Railway.—Traffic receipts for November, £3,650, decrease £749.

East and West Yorkshire Union Railways.—Traffic receipts for week ended January 18, £436, increase £15; aggregate from January 1, £1,252, decrease £31.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending January 15, £542, decrease £110; aggregate from Jan. 1, £1.089, decrease £193.

Blessington and Poulaphouca.—Traffic receipts for week ending January 15, £6, decrease £1; aggregate from January 1, £12, decrease £4.

Bristol Tramways and Carriage.—Traffic receipts for week ending January 17, £4,561, decrease £134; aggregate from Jan. 1, £13,602, decrease £477.

British Electric Traction.—Receipts of all the Associated Companies for the week ending January 10, £24,536; 427¼ miles.

Burnley Corporation.—Traffic receipts for week ending January 18, £1,169, increase £28; aggregate from January 1, £3,552, increase £22.

Dublin and Blessington.—Traffic receipts for week ending January 15, £94, increase £3; aggregate from January 1, £203, decrease £16.

Dublin and Lucan.—Traffic receipts for week ending January 17, £86, decrease £6; aggregate from Jan. 1, £210, decrease £25.

Dublin United.—Traffic receipts for week ending January 17 £4,719, decrease £7; aggregate from Jan. 1, £11,518, decrease, £271.

Edinburgh and District.—Traffic receipts for week ending December 28, £4,918, increase £542; aggregate from January 1, 1907, £257,110, increase £2,644.

Hastings and District.—Traffic receipts for week ending January 16, £692.

Isle of Thanet.—Traffic receipts for week ending January 18, £208, decrease £36; aggregate from Oct. 1, £4,489, increase £65.

London County Council.—Traffic receipts for week ending January 11, £28,855, increase £1,867; aggregate from April 1, £1,283,037, increase £210,655. Miles 115⅝, against 113¾.

London General Omnibus.—Traffic receipts for week ending January 18, £17,665 decrease £1,287; aggregate from Jan. 1, £51,634, decrease £5,607.

London Road Car.—Traffic receipts for week ending January 18, £5,659, decrease £1,083; aggregate from Jan. 1, £11,496, decrease £5,855

London United.—Traffic receipts for week ending January 18, £5,043, decrease £87; aggregate from January 1, £12,776, decrease £1,510.

Provincial Trams.—Traffic receipts for week ending January 18, £1,442, increase £56; aggregate from Oct.1, £23,713, increase £885.

Rossendale Valley.—Traffic receipts for week ending January 17, £165, decrease £21.

Sunderland District.—Traffic receipts for week ending Jan. 15, £385, increase £23; aggregate for 11 weeks £5,036, increase £807.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending January 20, £1,032, increase £89; aggregate from January 1, £3,054.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending January 21, £17,464, increase £1,091; aggregate from January 1, £53,871, increase £2,692.

Auckland Electric.—Traffic receipts for 25 days ending December 31, £11,367, increase £1,554; aggregate from January 1, £137,719, increase £8,019.

Brisbane. — Traffic receipts for month of December, 1907, £15,328, increase £1,829.

British Columbia Electric.—Nett earnings for November $86,047, increase $30,272. Aggregate nett earnings, including income from investments from July 1 to Nov. 30, $407,476, increase $117,168.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for 7 days ending January 21, £7,423, increase £807.

Calcutta. — Traffic receipts for week ending January 18, Rs. 48,740, decrease Rs. 11,076; aggregate from January 1, Rs. 1,53,296, decrease Rs. 38,848.

Cape Electric.—Traffic revenue for month of December, Cape Town, £11,679; Port Elizabeth, £3,751.

Carthagena and Herrerias.—Traffic receipts for the month of December, £3,254, decrease £2,252; total from January 1, £51,131, decrease £1,396.

Geneva Trams.—Earnings for December, fr. 189,275; increase fr. 9,122.

Kalgoorlie Electric.— Gross receipts for December, £4,109; aggregate from January 1, £47,824.

Lisbon Electric.—Earnings for November, milreis 46,117.

Madras Electric.—Traffic receipts for fortnight ended January 15, Rs. 19,685, increase 14 per cent.; aggregate from January 1, Rs. 19,685, increase 14 per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for December, £49,000.

Mexico.—Nett earnings for month of December, $208,386, increase $49,715; aggregate nett earnings from January 1, $2,163,490, increase $263,819.

Perth (W.A.) Electric. — Gross receipts for week ended January 17, £1,523, decrease £142; aggregate from January 1, £3,792, decrease £466.

Rio de Janeiro.—Nett earnings for November, $213,640; aggregate from January 1, $1,951,966.

Sao Paulo.—Traffic returns for November: nett earnings, $117,773, increase $12,773; aggregate from Jan. 1, $1,227,786. increase $53,527.

Twin City Rapid.—Traffic receipts for the month of November, $497,428, increase $38,791; aggregate from January 1, $5,552,879, increase $402,984. Nett traffic receipts, $233,018, decrease $649; aggregate from January 1, $2,852,445, increase $105,004.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Reduced from 5 per cent. on January 23.)

Norfolk House, Friday Evening.

It is useless to discuss whether the reduction in the Bank rate should have been ½ per cent. or 1 per cent. Practically the Governor had no choice. In the early part of the week the market was working at about 4⅛ per cent. for fine three months' remitted paper, and by Wednesday the best of it was 3⅞ per cent. with business 1/16 and even ⅛ per cent. below that quotation. What then would have been the good of coming down to 4½ per cent., even assuming that the rapid descent from 7 per cent. is in some ways disquieting? If the Bank of England wishes to be in control of the open market for the remainder of the quarter its first duty was to come as near as possible into line with the outside dealers in credit. This has been done by bringing the rate down to 4 per cent., and we do not think it will go lower for the present. There is no knowing, of course, because if our manufacturing industries take the same hue as those of other countries lately scourged by dear credit there may be such an accumulation of idle balances in London as will drive the Bank rate down to 3 per cent. In the meantime, however, the ease now established ought to be sufficient for all useful purposes, and we hope the open market will not work down much below to-night's closing figure of 3½-3⅝ per cent. Business was done yesterday at 3⅝ per cent., but that rate was quite the best of it to-day, for French buyers were in the market, and took fine paper as low, it was reported, as 3¼ per cent. One of the joint-stock banks was taking March bills from the brokers at 3 9/16, and full three months at 3½ per cent. February bills were turned out by the brokers at 3¼-⅜ per cent.

Short credits have not yet been made scarce by the ingathering of the revenue. Moreover, the fact that discount houses are now offering only 3 per cent. for seven-day money and 2¾ per cent. on call money, while the joint-stock banks have brought down their deposit rate to 2½ per cent., tempts speculation for the fall in discounts because the margin is so wide.

Short money, however, will get dearer unless the Chancellor of the Exchequer utilises his accumulating balances to keep the market supplied. Last week's revenue ingatherings amounted to £4,398,000, of which £1,066,000 was contributed by excise and £1,664,000 by the income-tax. Probably enough in coming weeks this rate of collection will be considerably exceeded, and the Bank return issued yesterday notifies to all and sundry that the supply of floating credit in the hands of bankers is becoming less. The public deposits rose £2,278,000 within the week, and as the market at the same time paid off £567,000 due by it to the Bank on other securities, the consequence was an actual decline of £1,220,000 in the other deposits, now down to £43,328,000, in spite of the addition of £1,656,000 made to the reserve.

This increase in the reserve is the most remarkable point in the week's return. By help of it the total reserve is now brought up to £27,523,000, which is £3,318,000 more than it was a year ago at the same date, but that is not the most striking fact about the change. It is found in the return of no less than £1,178,000 in coin from the interior. Only £364,000 nett in gold was received from abroad during the week, and the return of notes from circulation was only £114,000. The reserve was thus mostly built up with gold handed back by the other banks, and the amount is so large as to suggest a little hoarding by these banks. Trade is no doubt less active than it was, but the decline has not yet been so pronounced in any direction as to release a material portion of the floating wages fund. Some of the banks, we believe, did quietly absorb gold coins during the crisis, and were wise in so doing. Are they wise now in sending the gold back? We should not like to discuss that question just yet. It will be better to wait until the influence of the industrial recoil makes itself visible on banking figures.

What are the prospects of gold movements? More coin is going to South America, perhaps a good deal more, and a little this week, but in other directions and apart from our obligation to return about £3,500,000 probably postponed to the Bank of France, the change in the outlook is almost as remarkable as in the rates for banking credits. It is by no means improbable that the spring will see gold come back here from the United States, either directly or *viâ* South America, and large amounts in the metal are either on their way from Australia or in readiness there to be shipped. Egypt even is said to be in a position to send us back gold, having apparently financed its cotton crop against credits originated to help in tiding over last year's crisis, and it is just possible that the Indian Government may be driven to make further purchases of silver in which case more of its stock of gold here might be released. There is thus so great a change in prospects as to sweep away all the fears haunting the credit market until within the last fortnight and unless we subscribe for foreign loans and capital issues of English companies doing business abroad to an extent which involves the liquidation by shipments of gold, in part at least, of the debt thus created, we may pass through the next few months in a condition of comparative serenity. There is about £1,000,000 in the metal due here for Monday's sale, and as the price of bars has gone back to 77s. 9d. per oz. the Bank will secure the whole of it. It is not expected that more than £250,000 at the outside will be taken for Argentina to-morrow.

The French cheque is a little weaker at 25.18, no doubt because Paris has been buying securities in London. It seems likely to remain weak until our gold debt to the Bank of France is either paid off or renewed. At present it looks as if renewal would be effected wholly or in part.

The dividends and India drafts to be paid next week aggregate £1,548,800, and those of Lloyds Bank (£361,000) and the London and Westminster Bank (£182,000). A call of £280,000 is due next Friday on Central Uruguay Railway new preference.

SILVER.

Business in bars dwindled to very small proportions this week, and prices have fluctuated within very narrow limits. An advance of 1/16d. to 25 11/16d. per oz. in cash metal on Saturday was followed by a relapse to 25 9/16d. per oz. on Tuesday, and the forward quotation went back in sympathy to 25⅝d. per oz. On Thursday the loss was recovered owing to a little inquiry from

the bazaars, but it was met without difficulty and to-day the improvement was wiped out again, and the market closed dull at 25 9/16d. and 25 3/4d. per oz. respectively. Tenders for Rs. 75,00,000 Council drafts on India amounted to Rs. 3,16,78,300 in bills and Rs. 1,07,00,000 in telegraphic transfers. Allotments were made of Rs. 51,73,999 in bills and Rs. 23,26,000 in transfers, applications at 1s. 3 29-32d and 1s. 3 15/16d. receiving about 12 per cent. The amount to be offered next week is reduced to Rs. 60,00,000.

*** Owing to pressure on our space our notes of the speeches at bank meetings have had to be held back.—ED.

The Stock Markets.

Markets can hardly be said to have had time to realise what a startling change has come over credit, but there is every disposition to make the most of it, and already a very sensible improvement has taken place in high-class securities. Investment brokers still complain of the paucity of orders and of the over-caution of their clients, but a stimulus will now be given to investment by the low rate of interest allowed by banks and discount companies on balances deposited with them. It is true discount companies give 3 per cent. on notice money, which is more than can be got on Consols; but the joint-stock banks only allow 2½ per cent., and this small rate will certainly impel depositors to seek for the opportunity to get a higher return on their money elsewhere. Therefore, should our market continue easy, an improvement in the price of the best class of stocks may be counted on.

With regard to speculative securities we are not so sure. There are so many adverse influences still interfering with anything like general advance, and, as a matter of fact, the decline in the Bank rate to 4 per cent. was accompanied by weakness in the Home and American Railroad markets and on the Paris Bourse. This weakness may be nothing more than the eagerness to reduce commitments, which have been galling holders of many securities, while money was high in price; but that cannot be all the source of the tendency, and we fear many hidden losses still threaten the market with embarrassment, not only here, but in America and in France and Germany, where the industrial position does not improve. We do not feel so reassured as we ought to by the cheapness of money. It has been too sudden for wholesomeness.

Above and beyond anything of this kind we have the imminence of new issues of which shoals are waiting to be put upon the market. It may be true enough, as one exceedingly shrewd credit dealer observed to us, that a multiplicity of new capital demands need not necessarily have as an immediate consequence any hardening in rates for market money, because the more credit in this kind created the more credit is there to lend among bankers. The carrying of new securities, however, is always a source of market embarrassment in the long run, unless the investor promptly takes up the paper offered. Then it is all right, but we still have with us indefinite millions of underwritten securities that have not yet found a resting-place in the strong-boxes of investors, and if to these relics of bygone credit-utilising zeal the market has to add other millions of indefinite number to be carried by help of borrowed money, it may be taken as certain that the tendency of prices to rise will be checked and play in speculative divisions of the market kept almost as difficult under cheap money as it has lately been under dear. And we must not forget the array of over-capitalised businesses whose position continues to grow worse rather than better.

Trustee Securities.

Meantime trustee securities have benefited all down the list, and a pleasant advance has taken place in Consols and all Home Government stocks, in County Council issues of all denominations, in India stocks, and in some, though not many, Provincial Municipal issues. So happy is the aspect of the market that we are probably safe in looking for an immediate issue of that County Council loan so much talked of, and there will be other loans in plenty to accompany or follow it.

Still more marked has been the influence of cheap money upon the new issues already in existence. The new Cape loan, for instance, of which the underwriters had to take up 90 per cent., is no longer at a discount, but at ¼ to ⅜ premium, though how the rush is deep the market cannot guess. Grand Trunk Pacific new debenture stock, of which about 25 per cent. had to be taken by the underwriters, was also put to a premium of ¼ on Thursday afternoon, and Indian new was firm at 1 5/16-1⅛ premium. The price of Canadian Pacific "rights" was also harder at 8 13/16-13/16.

Colonial Inscribed stocks have been raised in price with the Home trustee groups, and such glowing accounts continue to be sent home of the prosperity in that part of the world that a certain amount of the available investment money is sure to find a lodgment in this quarter.

Foreign Government Stocks.

No particular elasticity is noticeable here, but Russian bonds are being worked up by Paris in preparation for the forthcoming Russian loan, although the Bourse there did not respond any more than our own market to the reduction in the Bank of France rate to 3 per cent. Here dealings in Russia centre always in the 5 per cent. loan of 1906, which has been an active market. Japanese bonds have not been a very vigorous market at any time, but the scares about the excessive Budget have died down, and the minute changes on the week are mostly favourable. South American Government issues are also firmer, including some of the later Chilian loans as well as Argentine and Brazilian, but Central American descriptions have rather fallen back. Cheaper money in Berlin has not yet influenced the prices of German and Prussian Government stocks.

Home Railway Stocks.

These constitute about the worst of any of the large markets. We cannot explain why, except that the traffic receipts continue favourable to the bears, last week's decline having been £52,518, according to the *Railway News*. Dividends are pouring out and are really not so discouraging, but sanguine players looked for rather more in the case of the Great Eastern Company, forgetting the severe loss inflicted upon it by the wreck of its steamer *Berlin*, and there is certainly nothing particularly stimulating in the announcements of any of the companies unless it be the Brighton, but the Central London has done better than many looked for, with its 2 per cent. on the deferred stock and £10,000 to the reserve with £10,218 to carry forward. Only the Lancashire and Yorkshire rate, though the same as before, was like the Great Eastern, a disappointment to some; yet all these adverse incidents together, as well as fears of more to come, would not have made the market sickly in face of the lower Bank rate had it not been that stock pawned with banks must be pressing upon dealers. Probably enough there will be some little recovery before long, and there was buying yesterday, although not vigorous enough to help the market much, but meanwhile losses have been rather severe compared with a week ago. Brighton deferred, for instance, is 3½ down, and Great Central has lost over 4 per cent. All the deferred stocks, too, are decidedly weaker, with the single exception of South-Western, and, of course, Metropolitan stock went down with the ruck, though showing symptoms of rally yesterday. This phase may soon pass off, but it is unpleasant enough while it lasts. The privileged stocks, however, indicate the expansion of investment demand, for not only are the changes there more numerous, but they are nearly all upwards; in fact, the only declines worth noticing have been in the 1894 preference of the Great Central and the arbitration preference of the Chatham.

Indian and Colonial Railway Stocks.

Indian Railway stocks have been very much neglected, but prices keep up and add on at least the accrued interest and dividend from time to time. We are not sure, however, that we could recommend buying in this direction, because there is unrest, not only amongst the masses of the Indian population and hunger amongst a great many, but because the struggle for higher wages is not nearly at an end amongst railway employees. A short time ago, for example, there was a strike of native Indian engine-drivers on the Eastern Bengal Railway. It soon ended, and little or nothing was heard of it here, but it came out that these drivers get about £3.33 per month made up to about £6 by overtime as against about £15 per month paid to European drivers. The native drivers wanted to be put on the European scale, but were merely offered another 13s. or so a month by the company. So it will go on, and working expenses in India must increase. Canadian Pacific shares were not so furiously tossed about as in recent weeks, and they have lost ground a little on the week's comparison, but their weakness has been often exceeded by that in Grand Trunk stocks where the volume of business is very much less. The Grand Trunk traffic returns are poorer looking than those of the Canadian Pacific, and the company does not possess the same means of making a good show in an abundant supply of new capital, to be spent, Sir Thomas Shaughnessy says, mostly "on improving the road." But there was an effort at recovery made yesterday.

United States Railroad Shares.

These have not benefited either by the exceedingly cheap money on Wall Street, and all the time the war goes on there between the market gladiators. The victory has been with the "shorts" in the past week, and most prices were $1 or 2$ down on comparison, Milwaukee, New York Central, Reading, Missouri, and Baltimore shares being prominently depressed. Illinois Central have also been flat, and, in fact, the whole market looks the reverse of comfortable. The gambling, however, has been very much restricted on this side, and takes violent lurches now towards one market counter, now towards another, always upon impulses from across the water. Bonds, too, have been less active, and some prices are down, but not the majority, for we note sensible recoveries in several New York Central issues and in one or two Louisville issues. The Consolidated gold bonds of the Southern Company, however, are distinctly flat.

Foreign Railways.

Foreign Railway stocks have not shared in the depression, but continue to advance. Improvements emerge all down the list, beginning with the Antofagasta assortment, followed by all the Argentine stocks of any consequence, and going on to the Cuban, Brazilian, and Uruguayan stocks. The stocks of the Mexican company, on the other hand, have lost ground, in spite of occasional demonstrations by the bulls. News from Argentine about crops and prices continues most favourable.

Banks, Breweries, &c.

As might be supposed, Bank shares are higher in price in numerous instances, and there is hardly a decline of the slightest moment to set against the gains. It is only a fragmentary sort of business that goes on in these shares, but they are obviously popular with a certain class of investors to whom the more or less formidable liability presents no obstacle, and the shares of our leading banks are either steady or higher, with the single exception of the National Provincial, both of whose issues have sunk back to about the prices they stood at before the execution of some recent buying orders sent them up. It is very easy to move a restricted market such as this one way or another. The changes in Brewery securities are just as disheartening as before, in spite of an advance here and there shown as in the debentures of the Chicago Breweries Company and the shares in some shares of the American group. No movement has been caused in London Docks stocks by the dividend announcement, and business in them has died quite away.

Commercial, Industrial, Electric and Other Securities.

An unusually large number of minute changes on the comparison of weeks is disclosed in the Commercial and Industrial group, but they seldom call for notice because they are nearly always unaccompanied by any indications of public interest. There has, however, been some business going on in Portland Cement shares, which, however, hardly affected prices, and a bargain occurs now and again in things like Frederick Hotels debentures, Nelson Bros. ordinary shares, Brunner, Mond ordinary shares and the preference shares of the Borax Consolidated Company, as well as in Waring and Gillow shares and debentures, Rio

Flour Mill shares, Pears ordinary shares, and the shares of some of the Nitrate companies. The majority of the changes on the week are favourable, and no relapse has occurred of any moment except in Brown and Eagle debenture stock, which is 15 lower.

Electric shares and debentures presented the same aspect as the Commercial group, only the changes there have not been so numerous as in recent weeks. Canadian Electric shares, though, dropped back $4, and Shawinigan stock and bonds are $1 to $1½ up. Home Electric securities are steady. Changes in Financial Land and Investment things are rather mixed, but Hudson's Bay shares have risen on the week, helped very much by the size of the bear account, and no particular weakness emerges at any point. Chartered debentures, however, are marked down 2 and Debenture Corporation stock is 4 lower, these changes being a matter of sentiment more than of selling. All Argentine Land companies' shares are firm as well as the debentures of the mortgage companies; in fact, River Plate Trust debenture stock is 1½ up.

Numerous changes are also noticeable amongst Financial Trusts, and generally in the right direction, but without evidence of business from one week's end to the other, and it is no use lingering over that part of the market.

GAS, INSURANCE, IRON, COAL AND STEEL, &C. GROUPS.

Extreme calm characterises the market for Gas securities and Insurance shares. In the first group the movements on the week are favourable, but far from numerous, and Insurance shares have changed much more generally and almost invariably in a favourable direction. Phœnix shares, for instance, rose to 33 last night, and not long ago before the new control was fully established the price was only 30. Royal Exchange stock continues to be lifted, and now and again finds a buyer. It is again 5 up on the week. Commercial Union shares and debenture stocks are also better. Here and there an Iron and Steel company's share is down 1s. 3d. to 3s. 6d., and once in a way an improvement is lighted upon, but this group is really one of the deadest in the whole market, and the only substantial movement in a prominent home security is an advance of ⅜ in Pease and Partners ordinary. United States Steel Trust common and preferred shares have fallen back. Shipping securities are also amongst the forgotten groups, and nothing has happened there since we wrote last. Trade has also been poor in Tea and Coffee and Rubber shares, where, however, prices keep up rather well on the whole. The movements are of no consequence either in the Telegraph and Telephone group, but there has been a slight decline in Eastern Telegraph ordinary and preference stocks, and no further advance of any moment in those of the National Telephone Company. Amongst Tramway and Omnibus securities, Buenos Ayres and Belgrano ordinary shares have been in quiet demand, and the debenture issues of the British Columbia Electric Company continue to improve. Mexico Tramways common stock has also been lifted $5½, but San Paulo Tramway shares are down to 118.

FRIDAY EVENING.

The near approach of the settlement and a disappointing dividend announcement by the Great Central has had a generally depressing effect. Consols have declined on profit-taking to 84 15/16 for cash and 85 for account, but are still 1¼ to the good on the week. Colonials, however, are better at an improvement of about ¼. Home Rails on the second disappointment have given way all round, Easterns being 2 down, North-Eastern 1¼ and Great Western 2¼ on the day. The Great Central announces a distribution of 2 per cent. for half-year, making 3 per cent. for the year on the 1889 preference, against 3 per cent. for the corresponding period, making 4 per cent. on that stock, besides ½ per cent. for the year on the 1891 preference. Of new issues, the new Indian loan shed ¾ to 1 7/16 premium, but Grand Trunk Pacific debentures put on a like fraction to 1 premium. Trunks bore the traffic decrease without yielding, while a good Mexican traffic left prices 1 under the best. Kaffirs continued in the dumps, and the only bright spots were Docks and Insurance companies and Anglo-American Telegraphs, where the dividend of 20s. on the deferred stock, against the market estimates of from 14s. to 18s., created a little bear stampede.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: 2½ p.c. Ann. ½, to 90½-91½, 2½ p.c Ann. 1905 and Acct. both 1½, to 83½-83¾, Irish Ld. Stk 1½, to 86-86½, do. Acct. 1½, to 86-86½, Exchequr. 2½ p.c. Bds 1, to 98½-99, Local Lns. Cable information has been received from Buenos Ayres to the effect that the Trans-Andine Railway are now open for Coach traffic. The journey between Buenos Ayres and Valparaiso may therefore be made (entirely by rail except for four hours' coach) in about three days from ocean to ocean.

The Directors of the Commercial Union Assurance Company, Ltd., having appointed the General Manager and Secretary of the Society, Mr. Joseph Powell, to be Deputy General Manager of the Fire, Life and Accident departments of that Company, the Directors of the Union Assurance Society, Ltd., have appointed Mr. Herbert Lewis, Manager, and Mr. Alfred Makins, Secretary of the Society.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

F. E. D.—(1) A promising looking investment if you could get them at, say, £1 under the price you mention. (2) This is fairly good, but we do not see much scope for improvement at the figure. (3) These also look a fair security for a lock-up.

H. D. R.—They should benefit a little by the circumstances named, and therefore seem a fair speculative purchase. If you mean to buy there is no object in waiting, as prices are likely to go up rather than down in the present mood of the market.

W. G.—(1) We do not follow your argument with regard to this, as the ordinary shareholders cannot in any case get any return until the preference shareholders are satisfied. The scheme seems a fair one, and it seems to us that the proxy should be signed. (2) The outlook does not appear to be very brilliant, and we think it would hardly be worth your while to increase your holding.

E. Porter.—We should not sell, as the company will not be allowed to go down. It is more likely that it will be amalgamated with some other and stronger company.

J. H. A.—(1) Somewhat speculative, but the company appears to be earning the interest on the present amount of debenture stock. There appear to be chances in its favour. (2) These are promising if you can get them about 73.

Nopir.—(1) This is a very promising investment. (2) Not a very strong concern. Should prefer to wait for report to see how company has fared under the new arrangement. (3) This should be all right in time, but more money will be wanted, and the price is consequently not likely to improve much. (4) The price here seems rather high, because further provision for depreciation may, for a time at least, affect its yield. No. 1 is speculatively the most attractive of your list. These answers leave a debit balance of 6d. on your deposit account.

W. S.—These should be a very fair speculative purchase.

Northwood.—(1) It seems a pity to throw these away, as the income should be fairly safe. The company's large holding in brewery securities, however, is probably against any recovery. (2) We should wait, because last year was an extremely bad one for this class of business. (3) Not much, we fear, although the company is showing signs of doing better. It might almost be as well though to wait and see the thing out as to sell at present prices.

W. A. P.—We do not think there is anything to be inferred from the incident you mention. The Government is undoubtedly corrupt, but the wealth of the country is increasing and the immigration is for the most part of a solid kind, so you need hardly worry on that head. With regard to the company, more than half the money you refer to consists of pension, renewal and other funds of a more or less trust character, and the remainder is probably held against emergencies, but the company is certainly pouring out capital at a great rate. New extensions are being built into new country, and these will take time to develop.

Thanet.—You have only sent 1s., and ask six questions. (1) You should take your profit on this because the railway troubles are not nearly over. (2) This is a weak security as there are a good many sectional bonds, which we fear would rank ahead of it. If the loss is unimportant we think you should sell. (3) There are prior lien bonds in this instance also. Still, the bonds ought to be well secured, and might be kept. (4) The finances of this part of the world are steadily going down hill, and the debt of the place is very heavy. From this you must draw your own conclusion. We do not advise an immediate sale, but if the price rallies take advantage of it. (5) Much the same remark applies to this stock, and yet the position of the City does give it a chance, owing to the development of the interior part of the country, and you might hold on. (6) In some ways this is the best stock of the group, in spite of the enormous load of debt carried, and you should keep it.

J. W. B.—The company has gone ahead too fast, and has over-committed itself. Its margin of profit was never sufficient to warrant the steady expenditure of capital and neglect of adequate reserves has brought the company into a very strained position. We doubt whether things will not go worse before they are better.

Tonk.—(1) It is calculated that the property has a life of 15 years. On last year's dividends, which were a little below those of previous years, the shares are just worth their present price as an investment. (2) Capital very large—profits lately have increased, thanks to larger mill and reduction in working expenses. If company can maintain 15 per cent. dividends the shares appear to be worth about 28s. 6d. (3) Profits also increased last year, but we have no reliable data as to life. Probably it will last 12 or 13 years and on that basis and 30 per cent. dividends the price is practically that of to-day. Reduction in working expenses would improve all these three, and is the only ground on which the prices can properly advance.

Cinder.—There has always been considerable manipulation over these shares. Assays show much variation in value. Shares are quite speculative, but with chances.

Company Reports and Balance Sheets.

**** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

GREAT EASTERN RAILWAY.

For the December half-year this company's gross earnings show an increase of £6,102 at £3,221,629, but much more than that is swallowed up by the growth of working expenses, which are £74,830 higher at £1,981,181, the ratio of expenses being 61.3 per cent. against 59.1 per cent. in the second half of 1906. To the nett revenue of £1,250,448 thus resulting various sums, including £25,524 brought forward, have to be added, bringing the entire free income of the half-year up to £1,283,195, out of which all prior charges are met, leaving £783,856 for the guaranteed, preference and ordinary stocks. All the preferences are met in full and a dividend at the rate of 4 per cent. per annum as compared with 5 per cent. a year ago, is declared upon the ordinary stock, leaving £89,795 to be carried forward against £88,260 similarly treated twelve months back. The increase in working expenses has been heaviest in locomotive power, which is £63,285 up at £523,860. Traffic expenses are also about £14,000 up at £555,913, but rates and taxes are down fully £7,000, and compensation is entered for only £10,239 compared with nearly £16,000 in the December half of 1906, and £18,621 in the June half-year. Steamboat receipts are little more than £3,000 larger than the expenses at £143,529 and in the expenses of £140,447, only £688 figures against compensation. The position of the *Berlin* disaster debit is therefore still a source of perplexity. As the directors explain, the Continental traffic shows a decline of £9,163 against an increase of £5,760 in the expenses. Passenger receipts on the railway fell off over £42,000 owing, the directors explain as usual, to electric tramway and motor omnibus competition in the London suburbs, with the addition of the cold and wet weather in July and the first part of August. Capital expenditure amounted to £95,219, of which £26,153 was laid out on additional works at Parkstone Quay and only £1,420 on working stock. The balance-sheet indicates an overdraft against capital of £1,160,473, and as £1,036,000 of the various trust moneys, contingent funds, savings bank money, insurance fund, and steamboat depreciation account, amounting in all to about £1,200,000, is separately invested, it is difficult to see how the company manages to rub along without a large issue of new stock. Perhaps, however, the investments are mostly entered in the company's own stocks, but even then the debit at capital account and the investment accounts, both set out on the same side of the balance-sheet, would seem to be a duplication. During the current six months the capital expenditure is put at £205,000, of which no less than £120,000 is for new working stock and steamboats. The dividend warrants on the ordinary stocks will be posted on February 14.

THE SOUTH-EASTERN AND CHATHAM RAILWAY COMPANIES.

The managing committee of these betrothed railways announces gross receipts for the past half-year amounting to £2,537,962 or £6,671 less than in the second half of 1906. Working expenses absorbed £1,576,402 of this income or £30,977 more, so that the decline in the nett revenue was £37,848. Passenger income showed up worst with a decline of £19,864 nett, but though goods gave £9,790 more and steamboats an increase of £3,032, the exhibit was at no point very cheering. The proportion of working expenses to income was 62.09 per cent. Against the decrease in nett income there was a decline of £3,034 in interest charges, making the divisible sum £894,809 or £34,513 less. Of this the South-Eastern company takes £527,937 and the Chatham £366,872. The committee has another growl at the tram and motor omnibus competition in the London area, but there is no divisible asset in that, nor is the fact any compensation for a decline of £10,407 in the third-class traffic and £8,622 in the first, not to speak of £1,105 in the second, "seasons" alone showing a gain. How can the trams, &c., hurt first-class passenger business if the service is as it should be? Why should the committee bother when capital is still to be had? It spent £138,179 last half-year, £55,556 of it for working stock, including £349 spent on "works under Railway Employment (Prevention of Accidents) Act, 1900," so careful is it of shareholders' interests. Among the items of expenses showing increases were locomotive power up £33,000, maintenance up £1,892, repairs up £5,211, and traffic expenses up £4,670, but there was a decline of £1,143 in compensation paid and of £4,571 in rates and taxes, as well as a small reduction in Government duty. Steamboat receipts are put down at £138,233, and steamboat expenses and compensation at £104,152. This is exclusive of harbour, canal and pier expenses, £3,645, against which tolls figure for £6,727. The general balance-sheet requires no special notice, but we are glad to see that £100,000 of the pension fund has been invested outside the undertaking—at least, we hope it is outside—even though the stocks bought are entered at cost.

LONDON, BRIGHTON AND SOUTH COAST RAILWAY.

Traffic receipts fell off by £41,797 in the past half-year, and working expenses were less by only £5,482. As the decline had been continuous throughout the whole of 1907 it follows that shareholders get a poorer return. After meeting all preference charges the dividend is only £3 7s. 6d. per cent. for the half-year on the undivided ordinary stock, making the yield for the entire year 4¾ per cent., as against 5½ per cent. for 1906. This means that the deferred stock instead of getting 5 per cent. for the year, as it then did, gets 3½ per cent., and the dividend on

the undivided ordinary stock for the half-year is 10s. down, compared to that paid for the second half of 1906. In studying the accounts it is difficult to see how the savings in expenses can have been all warranted. Gross receipts came to £1,782,083, and working expenses to £978,832, exhibiting the changes already shown, but the train mileage run is at 6,045,071, no less than 86,324 miles more than in the corresponding half-year. The directors also tell us in their report that the cost of coal, material, and general stores, taking the whole year in, increased by about £28,500, yet we find the increase in locomotive power only £10,759 for the past half-year, and there is actually a decline of £9,908 in the cost of maintenance of way, works, and stations. Repairs are also down £3,729, but there was an increase of £2,374 in traffic expenses—more than offset, however, by a decline of £3,612 in rates and taxes, inclusive of Government duty, which was also over £300 less. Now it does not seem like good management to have cut down maintenance charges so arbitrarily as the accounts show, and it is astonishing that the increased charge for locomotive power has not been greater in view of the greater amount of work done, the higher cost of fuel, and of everything else employed. After meeting all interest and rent charges, which at £169,691 took £2,067 less than a year back, there was £660,774 left, or £52,303 less than at the corresponding period, the entire nett income having been £830,474, including £10,000 from bankers' interest and £18,154 brought forward, and when all the dividends proposed have been paid the balance left over for the current half-year will be £28,704. The capital expenditure in the six months amounted to £129,450, and another £264,363 is estimated as the outlay for the current half-year, of which £61,363 is to go into new carriages, waggons, &c., and £40,000 will be spent on the equipment of the South London line between London Bridge and Victoria for electric working. Is the discarded plant of this line to be written off the capital account or how will it be dealt with? The question is of interest because the company's capital account is actually overdrawn by £1,055,438, which is within £80,562 of the whole of the trust funds in the possession of the company. A further issue of capital seems therefore not far off. Dividends are payable on and after February 13.

METROPOLITAN RAILWAY COMPANY.

The directors draw attention to the fact that the report for the half-year ended December 31 is the first since the agreement with the Great Central Company come into force in which it has been possible to make a comparison with the results of the corresponding half-year. Owing to the keen competition the number of passengers carried in the six months was 1,131,040 smaller, but the revenue only dropped by £1,632 to £240,047, as heavy declines of £6,093 in first-class and £4,452 in second-class traffic were largely neutralised by an improvement of £9,013 in the third-class. Season tickets yielded £3,043 more, and parcels, horses, &c., a few pounds less, making the increase in this branch £1,293 at £287,439. Merchandise traffic fell off a little, but minerals were up, and the total income from all sources amounted to £347,651 against £343,876. Actual working expenses were only reduced by £1,488 to £212,112, a decrease of £4,513 in rates and taxes being off-set by increases of £4,754 in locomotive and generating expenses and £1,000 in general charges, but the credit for working trains for other companies rose by £4,427, and this being deducted left the outgoings £5,915 down at £191,959 or 55.22 per cent. of the gross income. Receipts from City lines and extensions dropped off a little, and so far from there being any help from bankers' and general interest £4,158 had to be paid out under this head, but the proportion of nett revenue of the Metropolitan and Great Central joint line improved by £5,946, making a total of £223,384 against £208,505. Of this debenture interest took an extra £2,547, rents, wayleaves, and rent charges also went up by £2,490, and a new item of £6,000 for electrical renewal and depreciation now makes its appearance, leaving the amount available for dividend at £124,356, or practically the same figure as a year ago. Preference dividends having been met the consolidated ordinary stock has again to be content with a distribution at the rate of ⅛ per cent. per annum, and £5,516 or £302 less is carried forward. The surplus lands stock distribution is at the higher rate of 2¾ per cent. per annum, to which it was raised a year ago. In order to provide for the expenses in connection with the accidents which occurred at West Hampstead and Farringdon Street the directors have transferred to a suspense account £4,500 from the reserve, leaving that fund at £73,902. Expenditure on capital account was naturally considerably smaller than in the corresponding half of 1906, but was still fairly heavy at £120,511, of which £56,916 was an installation of electric traction, including £6,011 for loss on sale of rolling-stock, and £52,047 was for electric locomotives and other working stock. The debit balance under this head is now £333,089, and in addition to making use of savings bank and other funds the company has had to increase its temporary borrowings to £215,000. Reference is made to the conference of representatives of the various passenger-carrying companies in London, with a view to limiting competition, adjusting fares, arranging through bookings, &c. By this means it is hoped to help the interests of the companies concerned and at the same time give increased travelling facilities to the public. All the electric underground lines likely to be made are now open, and it is possible to gauge the effect they may have upon this company by diversion of traffic. On certain routes the directors admit that the loss has been considerable, but they are relying upon the large increase in the travelling habit of the people of London induced by the extra accommodation afforded to balance the losses by gains in other directions. The result on the traffic of the electrification of the Hammersmith and City line and the extension to Addison Road has been satisfactory, and a large business is expected this summer from the Franco-British Exhibition. In conjunction with the Great Western Company, who are partners in the line, it has been arranged to build a special station where the railway abuts on the site of the exhibition, with an entrance directly into the grounds. The dividends will be payable on February 4.

LONDON, TILBURY AND SOUTHEND RAILWAY.

Gross receipts for the second half of 1907 were £313,625 or an increase of £11,563, while working expenses rose by £7,490 to £180,124, the ratio being 57.43 per cent. against 57.28 per cent. The nett revenue therefore showed an improvement of £4,173 at £133,501, to which were added £4,166 brought forward, £531 from the Tottenham and Forest Gate and Whitechapel and Bow Railways and £1,406 from bankers' and general interest, making a total of £139,607 or £4,022 more. Against this, however, debenture interest required an additional £4,014, and after providing for rent the divisible surplus came to £110,980 compared with £110,915. Out of this a dividend is paid at the same rate as a year ago, viz., 7¾ per cent., and £4,444 is carried forward. With the dividend paid for the first six months the return for the year is brought out at 5⅝ per cent. or the same as in 1905 and 1906. Capital expenditure for the six months was £76,951, making the debit balance on this account £78,550, but the directors announce that the widening and improvement of the line between London and Barking is almost finished, and with its completion the extraordinary capital outlay incurred in recent years will come to an end.

LONDON AND WESTMINSTER BANK.

In the December half-year this old and steady-going joint-stock bank gathered a nett profit of £221,120, after making provision towards the pension and life insurance funds and for all bad and doubtful debts, besides paying the income-tax and setting aside £3,000 towards bank buildings. Adding in £18,091 brought forward, the sum free to be dealt with was raised to £239,211, which is £17,492 less than the sum available at the corresponding date last year, because of the balance brought forward being £23,061 down compared with the figure then available. In reality the gross profit of £370,299 was £4,073 up, while the expenditure of £149,179 was £1,496 down, so that taken by itself the result of the half-year's business was favourable. The directors, therefore, distribute the same dividend of 6½ per cent. for the half-year, making with the previous distribution 13 per cent. for the year, and after setting aside £10,000 as special provision towards the pension fund have £47,211 left to carry forward or £22,508 more than was brought in last July. A year ago, however, £50,000 was placed to reserve. Coming to the balance-sheet, we find the liability on deposit and current accounts down £1,648,748 to £26,825,051. The item circular notes, credits on agents, provision for bad and doubtful debts, rebate on bills, commission, loans and other entries, some of which might with propriety be sifted apart, shows an increase of £411,556 at £1,048,916. The liability on acceptances is also higher by £452,332 at £1,764,275, but the total reserve remains at £1,400,000, and in addition £100,000 stands at the credit of the Government securities depreciation account, so that altogether £1,500,000 has been set aside. The principal investment shown on the assets side of the account is £3,885,000, made up of £4,000,000 Consols taken at 85, of which £1,000,000 is allotted for the County Council, and £500,000 in Local Loans stock taken at 97, subject to the reserve of £100,000 just mentioned, the directors having adopted this method of providing for market depreciation instead of further writing down the price of the stocks in the bank's books. Of current commercial assets, the item bills discounted, loans and other accounts stands at £17,923,667, which is £467,824 larger than it was a year ago; but there is a decrease of £2,036,427 in the item money lent at call and short notice, the total of which is now £4,919,373. With a bank like the Westminster, whose position as a loan issuer for some of the most important Colonial Governments often places large balances temporarily in its hands, this sort of change is to be looked for. The cash in hand and at the Bank of England is £415,058 up at £4,243,911, and there is also a small increase of £4,666 in the item bank premises, whose total is now £788,513. During the year, moreover, £6,000 has been appropriated from revenue to building account. The total of the balance-sheet is £705,214 less at £34,182,527. The directors have elected Sir Montagu Cornish Turner and Mr. Colin Algernon Campbell directors to fill the vacancies caused by the death of Mr. Bonamy Dobree and the resignation of Mr. William Milburn.

NATIONAL PROVINCIAL BANK OF ENGLAND.

Including £91,018 brought forward, or £802 more than a year ago, the total profits of this great bank for the year 1907 amounted to £751,839 or £40,821 of an increase. An interim dividend of 8 per cent. was paid in August last and the board now proposes to give a final 9 per cent., making 17 per cent. for the year, free of income-tax. This will sweep away £510,000, and out of the balance £100,000 as compared with £60,000 a year ago is taken to write down the value of the bank's securities. Last year, however, £50,000 was added to the reserve fund, but even so the increase in the amount set aside is £50,000, and accordingly the balance left to carry forward is £9,179 smaller at £81,839. No profit and loss account is published, but the balance-sheet, which adds up to £60,075,401, shows a liability on deposits, &c., of £54,004,373, and a modest risk on the cross entry "acceptances and endorsements on foreign bills" of £639,180. The current and other account liabilities are up by

£662,811, but acceptances are less by £9,510, the increase in the balance-sheet total being £644,122. Amongst assets cash in hand and at the Bank of England stands at £9,250,592, being an increase of £647,983, but money lent at call and short notice is down £1,765,830 at £3,280,211. There is also a decrease of £216,591 in the total of the bank's investments, which now stands at £13,739,152, of which £8,618,075 is in English Government securities, £75,500 being lodged for public accounts, £4,758,564 in Indian and Colonial Government stocks, and the usual upper ranking securities of British Railways, Corporations, &c., the total being made up of £362,513, represented by Canal, Dock, River Conservancy and other investments. Bills discounted, loans and other advances, an item rather compressed, show an increase of £2,001,704 at £33,441,228 and bank premises are £13,673 down at £625,029, a low total for an institution with so many branches.

METROPOLITAN BANK (OF ENGLAND AND WALES).

This bank would seem to be progressing in a steady fashion, which, we trust, implies solidity. Nett profits for the past year came to £118,543, being an increase of £17,292 on the previous year's return, and as £12,665 more was brought forward at £33,526 it follows that the total divisible profit was nearly £30,000 higher. The directors, however, pay the same dividend as a year ago—viz., 15 per cent. per annum, only it is now all dividend and not dividend and bonus as it was then when 13¾ per cent. was paid as dividend and 1s. 3d. per share as bonus. This takes £75,000, the same as before, and the same £3,750 is required to meet income-tax. Then the bank premises redemption fund is credited with £1,000, besides £1,402 for interest on the money already accumulated, or £2,402 in all, and the pension fund again gets £2,500, while £5,000 is written off bank premises account, which is the same as a year ago. Then the further provision for depreciation in investments is put at £20,000, and even so the balance carried forward is raised to £43,418, which is altogether a creditable display. Liabilities to the public as shown in the balance-sheet amount to £9,166,392, of which £9,029,108 consist of liabilities on current, deposit, and other accounts, the increase in which is £43,210, the remainder of the total just given being composed of minor items, including £5,105 for rebate, £67,397 a cross entry of bills held for collection, and £56,401 also a cross entry representing foreign bills negotiated. A sum of £8,380 covering seven day and other drafts completes the amount. The bank premises redemption fund, which belongs to the proprietors, is now £48,772. A respectable increase of £167,847 is shown in the cash in hand and at the Bank of England, but money lent at call and short notice is down £46,144 to £1,696,613. The investment total is £1,298,976, and shows an increase of £41,704. Of this total £724,643 is in British and Indian Government securities, but no indication is given as to the price they are taken into the balance-sheet at. Colonial Government securities, Railway and Corporation stocks, and debenture stocks make up the remaining £574,333, and on these investments also the depreciation must have been severe in recent years. All the other assets of the bank, except the premises, are put in one item of £4,930,250, which is £260,745 less than the similar entry of a year back. Bank premises are up £23,354 at £384,569, so that the expenditure in that direction must have been rather princely. The total of the balance-sheet is now £10,146,081.

CLYDESDALE BANK.

The nett profits made by this important Scotch bank in the twelve months ended December 31 last were £3,781 up at £183,167, but as there was a decline of £6,614 in the amount brought forward, which was £20,945 against £27,559 a year ago, the divisible profit was really £2,833 worse at £204,112. The board, however, is able to provide for the usual dividend of 12 per cent. upon the paid-up capital, half of it to be distributed on February 11 and the other half on August 4 next. Then £6,000 is again assigned to the payment of income-tax on this dividend and £5,000 in reduction of cost to bank buildings, while £50,000 is set aside for the depreciation of investments as compared with £30,000 put to the reserve last year and £25,000 to depreciation. A balance of £23,112 will then be left to carry forward or £2,967 more than was brought in. The reserve remains at £810,000, exclusive of the whole year's profit, still undistributed, and the balance carried forward, together amounting to £143,112. The assurance is given by the board that the £50,000 now set aside fully covers the depreciation in the value of the bank's investments. The balance-sheet shows a reduction of £8,142 in the active note circulation, which is now £856,863; but the liability on deposit and current accounts with credit balances is up £784,440 to £12,534,996, and letters of credit, drafts at a short currency, and payments *in transitu* show a rise of £75,594 at £229,455. There is, however, a decline of £21,321 in the acceptances, whose total is now £337,158. The assets are more mixed up than they should be, for the largest item of all is thus set forth: "Investments in Consols and other securities, temporary loans, money at call and short notice, £5,151,817," showing an increase of £23,967, but no one can infer anything from a jumble of that kind. Next we get "credit accounts and other advances to customers £5,080,671," which shows an increase of £147,074. Bills discounted, are stated separately, and at £2,697,524 show an increase of £126,558, while "gold and silver coin, notes of other banks, cheques, &c., *in transitu*, and cash balances with London and country bankers," another choice mixture, shows an increase of £570,932 at £2,213,917. If all this were extra gold held, it would have something to boast of and display. Bank buildings, including London property, are reduced by £4,470 to £325,496, but other real estate yielding rent remains at £105,000, the total of the balance-sheet being £15,911,584 or £842,740 more than it was a twelvemonth ago.

SHEFFIELD BANKING CO., LIMITED.

The big increase of £7,866 in nett profits for 1906 has been followed by a drop of £1,212 to £68,374 for the past twelve months owing to the less favourable conditions which prevailed. A much smaller balance of £5,545 was brought forward, making a total of £73,919 compared with £77,156, but the directors, instead of putting £10,000 to the inner reserve, transfer £4,075 to investments reserve, and £1,000 to officers' retiring fund, and write an extra £1,000 at £2,000 off premises account. With the extra resources put at their disposal in this way they are able to maintain the dividend at 15 per cent., and to carry forward £6,233 or £688 more. In order to provide for the further depreciation in Government and other high-class securities the directors have transferred £15,925 from the surplus fund to the investments reserve, making with the amount set aside out of revenue £20,000, which is sufficient to bring all the investments well within current market prices. After making this transfer the surplus fund stands at £300,000, against a paid-up capital of £404,075. Liabilities on deposit and current accounts are £125,224 down at £3,261,703, while on the assets side cash on hand and at bankers and money at call is £177,734 up at £1,151,161, an increase which we hope is in the more liquid portion of this item. Investments have been reduced by £27,779 to £516,901, bills of exchange are £19,899 less at £227,120, and short loans on stocks, or in other words contango business, are down by £12,052 to £21,673, but the largest change of all is the decrease of £256,514 to £2,033,388 in advances and loans on securities. Bank properties are valued at £62,175, and the aggregate of the balance-sheet is now £4,012,418 against £4,152,880.

BRADFORD BANKING CO., LIMITED.

After making provision for all bad and doubtful debts and allowing £3,800 or £1,135 more for rebate on bills not due, the nett profits of this bank for the year ended December 31 showed a decrease of £3,725 at £52,704. With a larger balance of £6,331 brought in the decline in the disposable surplus was reduced to £2,101 at £59,035, but it was still serious enough to cause the directors to cut down the dividend. The interim payment made in August was the usual one of 3s. 6d. per share, but the final distribution is 6d. less, making 6s. 6d. for the year against 7s., but this enables the directors to transfer the usual £5,000 to reserve, and to add £1,277 to the sum carried out at £7,608, after paying £2,227 for income-tax. The reserve fund now amounts to £210,000, but it is proposed to take £60,000 of this to provide for depreciation on investments and other securities, and if this step is sanctioned by the shareholders it will leave a reserve of £160,000 against the paid-up capital of £408,000. Liabilities on deposit and current accounts are £124,580 higher at £1,947,216, but the note circulation is steadily shrinking and now comes to no more than £7,500 compared with £10,820 a year ago, and £14,095 at the end of 1905. On the other hand, cash on hand and with London and other bankers has been increased by £13,736 to £153,062, bills of exchange are £50,174 up at £316,702, and advances on current account total £1,591,573 or £66,179 more. Investments are a trifle lower at £250,256, freehold and leasehold properties yielding rents are also £810 down at £24,440, and mortgages and loans on securities show a reduction of £3,525 at £249,984. Bank premises are unchanged at £20,735, but the entry on both sides of the account for acceptances has gone up by £15,294 to £24,055, and the aggregate of the balance-sheet is £2,630,807 against £2,490,219.

LAW DEBENTURE CORPORATION, LIMITED.

Judging by the balance-sheet, this company made a further effort during the past year to reduce its contango business on the Stock Exchange, and to get back to its legitimate sphere of action with beneficial results. The income from interest and commissions rose by £2,230 to £51,393, but of this £1,725 or £1,034 more represented receipts in advance, leaving the nett revenue £1,196 up at £49,668. Accrued interest amounted to £3,197 or £903 less, but fees as trustees and other receipts gave an additional £496 at £5,918, and the total from all sources was therefore £790 better at £58,783. A slight saving of £368 at £8,134 in administration expenses, including £3,000 to the directors was, however, much more than offset by an increase of £1,144 to £5,144 in the amount written off securities, and nett profits were consequently brought out at £28,405 compared with £28,391. Preference dividend having been met a balance of £19,855 was left, which, with £95 from interest earned on the ordinary shareholders' reserve, is applied in payment of the usual dividend of 7 per cent. on the ordinary shares. Loans against security have been reduced by a further £46,070 to £453,695, and at the same time debentures and debenture stocks held show an increase of £80,013 at £472,113, with the consequence that cash is £33,837 down at £43,715. Investments in Metropolitan Water Board "B" stock on account of the general reserve of £14,453, the ordinary shareholders' reserve of £25,874, and the nett premiums received on debenture stock and preference shares of £15,687 stand at £56,015 or £1,080 more, the increase representing the addition of interest to the first and second of these funds; but the market value on December 31 was no more than £53,221, so that there is a depreciation of £2,392 to be provided for sooner or later. Sundry creditors come to £840 less at £3,535, and debtors have risen by £1,047 to £9,886, but accrued interest is £903 smaller at £3,197.

MORTGAGE COMPANY OF THE RIVER PLATE.

For the past year this company's profit amounted to £57,018, or with £20,783 brought forward to £77,801 all told, which is £5,372 more than in the previous year. The directors accord-

ingly raise the distribution for the year upon the ordinary stock to 15 per cent. by providing for a final 6½ per cent., together with a bonus of 2½ per cent. A year ago the dividend and bonus came to 14½ per cent. These payments are made free of income-tax. Then the reserve fund again gets £12,500, raising it to £280,000, and £22,801 is left to carry forward or £2,018 more than was brought in. The directors further state in their report that the company's holding in Consols has been written down to 80, and that the market value of the remaining investments is in excess of the sum at which they stand in the books. Mr. James Anderson has succeeded Mr. William Wilson as chairman of the board, Mr. Wilson having retired from that position owing to impaired health, but he still retains his seat as director. An increase of £84,613 took place in the amount sunk in gold loans on mortgage of freehold properties, which is now £1,247,074. Investments in marketable securities are up £14,809 to £171,923. Temporary loans in London stand at £56,000 and cash at bankers at £21,235, loans showing an increase of £24,000 and the cash of £13,767. Liabilities have changed comparatively little, but sundry creditors are now only £6,896 against £25,151 last year. The profit on investments realised came to only £694 last year, which is not surprising in view of the state of business. It is, indeed, a good sign, showing that properties are well held, that there has been nothing to force people to sell.

THE RIVER PLATE AND GENERAL INVESTMENT TRUST COMPANY.

An increase of £4,309 is shown in the income of this company for the year closed December 31 last, the total being £36,566 for that period. Of this £30,863 remains as nett revenue, after meeting debenture interest, discount and calls paid in advance, a trustee and management fee of £2,000, and minor charges of about £133. The trustees are therefore able to pay the full dividend on the preferred stock, and by a further dividend of 4 per cent. on the deferred to make up the return on that part of the capital to 6½ per cent. for the year. Then £2,501 is added to the reserve fund raising it to £65,500, and still there is £6,966 left to be carried forward against £6,104 brought in. Thanks to the issue of £150,000 in 4 per cent. debenture stock early last year, the investments of the company are £154,502 more at £729,949, but in other respects the balance-sheet shows nothing to comment upon, still less anything to cavil at. It is stated by the trustees that the nett profit on securities realised during the year came to £10,286, of which they have placed £5,000 to the reserve fund and applied the balance of £5,286 to the reduction of the cost price of certain investments. A valuation of the assets, their report adds, at the close of the year shows that the company's capital and reserve fund are intact, and a list of the investments can be had by any stockholder on application at the offices of the company.

LISTER AND COMPANY.

Another improvement, this time of £4,391, is shown in the profits of this company for the year closed November 30 last, making the total £128,146. As £4,421 more at £19,240 was brought forward, it follows that the sum distributable is £8,813 up at £147,386. The directors, therefore, again pay a dividend of 6 per cent. on the ordinary shares, and this time transfer £25,000 to reserve against £20,000 in their previous year and £10,000 in the year before that. This still leaves £23,011 to be carried forward or £3,771 more than was brought in. From the income point of view, therefore, the company has been doing well; but its balance-sheet is still rather a lamentable affair, and we maintain the opinion that it would have been better for the interests of proprietors if the dividend had never been raised to 6 per cent., or even put beyond 4 per cent. Last year, however, £943 nett was actually written off the value of the item patents, trade-marks, freehold premises and machinery, leaving out goodwill; but the reserve, which is now £145,000, is entirely locked up in the business. Other items amongst the assets call for little observation, but there is an increase of £58,066 in the stocks on hand now entered at £576,850, and sundry debtors owe the company a trifle more at £190,103, while there is a decrease of £15,210 in the item cash at bankers and cash and bills receivable in hand, now down to £98,832. Sundry creditors have risen to £112,475, so that the company does not appear to be stronger in free resources, notwithstanding the increase shown in its profits. But in one direction economy continues to be exercised, for directors' fees are entered at only £375. The profit and loss account, however, is a meagre one.

PERRINS, LIMITED.

This company was established in May, 1900, to acquire an invention for an improved method of making wrought-iron and steel tubes, and in 1905 it purchased the Mostyn Tube Company's establishment with a view to becoming a manufacturing concern. So far its efforts have met with a very poor result, and it has done nothing but pile up an adverse balance, which is likely to cripple it for a very long time. The directors state that it was considered desirable that a steel furnace and strip mill should be erected, in order that the company might acquire its raw material at reduced prices, and the greater part of the year ended June 30 last was occupied with these extensions. Of course, the steel furnace cost more than was anticipated, and equally, of course, there were delays and breakdowns which reacted upon the producing capacity of the works, and the nett result of the year's business was a loss of £5,946. This, added to the debit balance brought forward, made the total loss to date £27,222, but the directors, in their desire to assist the company in every possible way, have agreed to forego their accumulated fees, amounting to £7,983, leaving £19,238 still to be wiped out. The directors' statement of the causes for the unfortunate result is, no doubt, accurate enough so far as it goes, but it seems to us that the real reason is to be found in the way the company is overburdened with unremunerative assets. Out of a paid-up capital of £270,000 no less than £254,525 is represented by patent rights and goodwill, which does not leave much of a margin for working capital, and it is plain to account that the company paid far too much for its whole. A [illegible] works, buildings, &c., have cost £18,500, debenture stock, whatever that may be, stands at £8,410, and £1,000 is invested in preference shares of the Mostyn Tube Company. As trade stocks are valued at £90,022 the capital has proved insufficient, and £23,402 has had to be borrowed from the bankers. As might be expected, trading accounts are decidedly adverse, £16,220 being due to sundry creditors against £8,340 to come in from debtors, and altogether the position is not about as bad as it can well be. The balance of 8s. 6d. per £ on 57,500 ordinary shares has been called up since the end of the financial year, and this with calls in arrear will produce £25,334; but practically all of it will be needed to pay off the bankers, and what is left will not carry the company far.

ANGLICIA PETROLEUM COMPANY.

The directors of this enterprise do their best to be cheerful, and their report for the year ended April 30, 1907, discloses an ability to write off £1,080, being one-fifth of the preliminary expenses. A dividend of 7 per cent. for the year on the first preference shares was also paid leaving £5,534 to be carried forward, leaving also £125,000 in 6 per cent preference shares and £62,000 in ordinary shares without any return. Now is it possible to guess when any dividend can reach them. All depends at present upon the capacity of the Galizische-controlled company to continue to furnish £10,000 in order to meet the first preference dividend, and the wells sunk appear to be capricious in their yield, in spite of the fact that the gross profit of the year ended so long ago showed an increase of £10,000 as compared with the previous year. This, however, was much more than neutralised by the disappointing results obtained at Boryslaw, which rendered it necessary in the best interests of the company not only to write off the whole drilling expenses of the year, but also to increase the amount assigned to depreciation by £30,000. This may appear a large amount, the directors say, but they wisely add that, in dealing with oil properties, it is absolutely essential in order to maintain the business in a sound condition to make ample provision under these headings. Elsewhere production has not been very satisfactory. There has been a small falling off at Schodnica, and although Boryslaw did well most of the year, the last few months has shown a material reduction in output, and several shafts already sunk to a great depth have not up to the present come into production. To complicate matters still further, the refined oil cartel or combine came to an end in April of last year, but the directors took time by the forelock, and by spending money in enlarging certain departments of the refinery, have been able to largely increase trade, thus counteracting, it is thought, the effect of the reduced selling price of kerosene. From trading accounts recently received the board has reason to anticipate that even without the cartel the company is maintaining its profits, which is the best piece of news in the report. But why is the amount due by the Galizische Naphta or "Galicia" company rising so fast? It is now, at £106,606, £11,134 higher than it was the year previous. On the other hand, bills payable are also £12,500 up at £51,000, but cash is £4,734 better at £5,798 and preliminary expenses are now written down to £1,976, so there is room for hope yet.

NEXT WEEK'S MEETINGS.

MONDAY, JANUARY 27.

Cerebos.—Newcastle-on-Tyne, 2.45 p.m.
East London Railway.—Cannon Street Hotel, 2 p.m.
Foster, Porter and Co.—47, Wood Street, E.C., 11 a.m.
Hibernian Bank.—Dublin, 1 p.m.
Marenilla Linares.—Salisbury House, 1 p.m.
Messina (Transvaal) Development.—Salisbury House, noon.
Raffety, Thornton, and Co.—42, Old Broad Street, E.C., 3 p.m.
Scott, Son and Co.—8, Cannon Street, E.C., 11 a.m.

TUESDAY, JANUARY 28.

Direct United States Cable.—Winchester House, 2 p.m.
Emu Bay and Mount Bischoff Railway.—Blomfield House, 12.30 p.m.
Horace Cory and Co.—Cannon Street Hotel, 12.30 p.m.
Lister and Co.—Bradford, noon.
Merchants' Marine Insurance.—37, Cornhill, E.C., 12.30 p.m.

WEDNESDAY, JANUARY 29.

Anglicia Petroleum.—Winchester House, noon.
Anglo-Galician Oil.—Winchester House, 12.30 p.m.
Boston Consolidated Copper and Gold Mining.—Winchester House, noon.
Bradford District Bank.—Bradford, noon.
Carlisle and Cumberland Banking.—Carlisle, 12.30 p.m.
Halifax Joint Stock Banking.—Halifax, 11 a.m.
Interoceanic Railway of Mexico.—Winchester House, 2.30 p.m.
John Howell and Co.—3, St. Paul's Churchyard, E.C., 4 p.m.
Lanarkshire Tramways.—53, Cannon Street, E.C., 2.30 p.m.
Lloyd and Yorath.—Newport, Mon., noon.
London and Lancashire Fire Insurance.—Liverpool, noon.
London Trading Bank.—Cannon Street Hotel, 2 p.m.
Metropolitan Railway.—Great Eastern Hotel, noon.

National Mutual Life Assurance.—39, King Street, E.C., 2 p.m.
Scottish Union and National Insurance.—Edinburgh, 3 p.m.
South-West Randt Mines.—Winchester House, noon.

THURSDAY, JANUARY 30.

Borax Company.—Winchester House, noon.
Egyptian Land and General Trust.—Winchester House, noon.
Goldfields of Dharwar (India).—6, Queen Street Place, E.C., 2.30 p.m.
Kitty Wheal and Penhalls United.—Salisbury House, 2.30 p.m.
London and S.W. Bank.—Liverpool Street Hotel, 1 p.m.
London Pavilion.—Piccadilly, W., 2 p.m.
London, Tilbury, and Southend Railway.—41, Trinity Square, E.C., noon.
Louise and Co.—Winchester House, noon.
Madras Railway.—Salisbury House, 2.30 p.m.
Maritime Insurance.—Liverpool, 11 a.m.
Metropolitan Bank (of England and Wales).—Birmingham, noon.
National Provincial Bank of England.—112, Bishopsgate Street, E.C., noon.
New York Pennsylvania and Ohio 1st Trust.—Winchester House, 2.30 p.m.
River Plate and General Investment.—52, Moorgate Street, E.C., 11.30 a.m.
South-Eastern Railway.—Cannon Street Hotel, noon.
Tasmania Gold Mining.—6, Queen Street-place, E.C., noon.

FRIDAY, JANUARY 31.

Antenior (Matabele) Gold Mines.—Salisbury House, 12.30 p.m.
Bradford Banking.—Bradford, 11 a.m.
Foreign and Colonial Investment Trust.—Cannon Street Hotel, noon.
Government Stock and Other Securities Investment.—Winchester House, noon.
Great Eastern Railway.—Great Eastern Hotel, noon.
Law Debenture.—Winchester House, noon.
Mortgage Company of the River Plate.—52, Moorgate Street, E.C., noon.
North of Scotland Bank.—Aberdeen, noon.
Northern Corporation.—Newcastle-on-Tyne, noon.
Revue (Manicaland) Gold Mining.—Salisbury House, noon.
Sheffield Banking.—Sheffield, 11 a.m.
Texas Land and Cattle.—Dundee, 1 p.m.
Thames and Mersey Marine Insurance.—Cannon Street Hotel, 1.15 p.m.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Dublin and South-Eastern.—Dividend on the consolidated preference stock for half-year ended Dec. 31, carrying forward £11,044.

Great Northern.—On the ordinary stock for half-year ended Dec. 31 at the rate of 6¾ per cent. per annum, placing £25,000 to renewal and improvement funds, carrying forward £51,000.

Isle of Wight.—For past half-year, viz.:—4 per cent. per annum on the preference stock, 4 per cent. per annum on the preferred converted ordinary stock, and 3½ per cent. per annum on the deferred converted ordinary stock.

London and South-Western.—For half-year ended Dec. 31 at the rate of 7¾ per cent. per annum on the original ordinary stock, the full dividend at the rate of 4 per cent. per annum for half-year on the preferred converted ordinary stock, and 1¾ per cent. for whole year on the deferred converted ordinary stock, carrying forward £32,615.

Metropolitan.—Upon the ordinary stock for past half-year at the rate of 10s. per cent. per annum, carrying forward £5,500. On the surplus lands stock at the rate of 2¾ per cent. per annum, carrying forward £900.

Rhymney.—At the rate of 7 per cent. per annum on the ordinary stock for half-year ended Dec. 31, carrying £6,029 forward.

BANKS.

Bank of Egypt.—10 per cent. for year ended Dec. 31, also a bonus of 20s. per share, making 18 per cent. for the year, placing £20,000 to reserve, and carrying £38,476 forward.

Commercial of Australia.—At the rate of 3 per cent. per annum on the preference shares, placing £20,000 to special assets trust reserve account, £26,860 to Special Assets Trust Company, and carrying £8,400 forward.

Commercial of Sydney.—At the rate of 10 per cent. per annum, placing £20,000 to reserve, and carrying £29,377 forward.

Natal Bank.—At the rate of 9 per cent. per annum, making 9½ per cent. for 1907, adding to the pension fund £2,000, and carrying forward £20,762.

INSURANCE.

London and Provincial Marine and General.—5 per cent., making 10 per cent. for 1907.

Ocean Marine.—2s. 6d. per share, and 5s. per share bonus, making 20 per cent. for year ended Dec. 31.

BREWERIES.

Bristol United.—Final for past year of 15s. per share.

City of London.—1¼ per cent. on the ordinary stock and shares for six months ended Dec. 31, making 2½ per cent. for the year.

Northern Corp.—17 per cent. per annum on the ordinary shares for half-year ended Dec. 31, making 12½ per cent. for the year.

MINES.

Alaska Mexican.—50c. per share, payable Jan. 28.
Alaska Treadwell.—75c. per share, payable Jan. 28.
Alaska United.—15c. per share, payable Jan. 28.
Brilliant Central.—6d. per share.
Broken Hill Proprietary Block 14.—1s. per share, payable Feb. 19.
Broken Hill South Silver.—2s. per share, payable Feb. 22.
Dolores.—Fifth (interim) of 3 per cent. (7 1-5d. per share), payable Feb. 25.

MISCELLANEOUS.

Andrew Knowles and Sons.—Further of 24s. per share, making 36s. for the year.

Australian Agricultural.—Interim of 40s. per share.

Consett Iron.—10s. per share on the ordinary shares, and 4s. per share on the 8 per cent. preference shares for past half-year.

Damansara (Selangor) Rubber.—2 per cent.

Foreign and Colonial Investment Trust.—For half-year ended Jan. 10, at the rate of 7 per cent. per annum, together with a bonus of 1 per cent. for the year upon the deferred stock, carrying forward £15,919.

Gas Light and Coke.—At the rate of £4 8s. per cent. per annum, carrying forward £349,551.

Guaranty Trust of New York.—For past year at the rate of 20 per cent. per annum, carrying £182,668 forward.

Imperial Tobacco.—10 per cent., and a bonus of 2 per cent. on the deferred ordinary shares, for the year ended Oct. 31, placing £250,000 to general reserve, and carrying forward £203,000, which includes reserve for customers' bonus.

Lanarkshire Steel.—5 per cent. per annum on the ordinary shares for year ended Dec. 31, carrying £14,468 forward.

London and India Docks.—3 per cent. on the deferred ordinary stock for 1907, carrying £3,608 forward.

Montreal Light, Heat, and Power.—1¼ per cent. on the paid-up capital stock (being at the rate of 6 per cent. per annum) for quarter ending Jan. 31.

S. Hoffnung and Co.—Interim at the rate of 5¼ per cent. per annum on the preference shares for six months ended Sept. 30.

Weldons.—Interim, February 8, on the ordinary shares at the rate of 10 per cent. per annum for the half-year ended Dec. 31.

Welford and Sons.—At the rate of 12 per cent. per annum, making 10 per cent. for the year.

MINING RETURNS.

Abbontiakoon Block 1.—Crushed 6,000 tons; fully treated 5,334 tons, yielding 2,007.8 oz. bullion from plates, and 988.7 ozs. from the sands and slimes.

Alaska Mexican.—Crushed 19,396 tons ore, value $43,809; saved 287 tons sulphurets, value $24,256.

Alaska United.—Crushed 19,670 tons ore, value $23,520; saved 304 tons sulphurets, value $10,069.

Brilliant Central.—Crushed 1,416 tons, 1,110 ozs.

Brilliant Extended.—Crushed 3,085 tons, £6,237.

Briseis Tin.—Shipped 17 tons, including 1 ton of New Brothers Home No. 1.

Broken Hill Proprietary.—Refinery products (including product from ores purchased): silver, fine, 139,973 ozs.; soft lead, 1,861 tons; antimonial lead (estimated), 6 tons; zinc concentration: zinc concentrates, 2,316 tons, containing, silver, fine, 38,210 ozs.; lead, 259 tons; zinc, 953 tons.

Camp Bird.—Crushed 6,996 tons ore, yielding 8,714 ozs., and 474 tons concentrates; received from sales of product: bullion (including cyanide bullion), $153,631; concentrates (494 tons), $17,749; profit, £22,912.

Carrington's United.—Smelted 200 tons for 85 tons matte, containing 22 tons copper, 124 ozs. gold, and 267 ozs. silver.

Chinese Engineering.—Output, 18,000 tons; sales, 20,500 tons; consumption, 3,000 tons.

Cobalt Central.—Mill 72 ozs., tails 5 ozs.; extraction 94 per cent.; crushed 50 tons, silver 3,350 ozs.

De Lamar.—Crushed 3,000 dry tons, yielding $29,700; surplus, $2,000; ore shipped to smelters, $2,300; total, $34,000.

Duff Development.—Prospecting dredge 28 ozs., No. 1 36 ozs., No. 2 24 ozs., No. 3 26 ozs.; total 114 ozs.

Esperanza.—Crushed 1,404 tons dry ore, 508 tons dry ore concentrates shipped; profit £19,653.

Jumbo.—2,579 tons ore crushed, 1,142 ozs.; 1,390 tons concentrates, 362 ozs.; 876 tons slimes, 137 ozs.; total 1,641 ozs.; profit £3,300.

Kluchi Gold.—Crushed 465 tons (short), 126 ozs.; 371 tons tailings, 32s. per ton.

Mexico of El Oro.—Crushed 6,068 tons ore, value U.S. $72,180.

North Broken Hill.—Treated 2,400 tons crude ore, producing 407 tons concentrates, containing 281 tons 17 cwt. lead and 8,303 ozs. silver.

Orsk Goldfields.—370 ozs., value £1,311.

Ouro Preto.—Ore produced 5,620 tons, 1,994 ozs.

Rhodesia Matabeleland.—Crushed 551 tons, 137.35 ozs.

Sulphide.—19,559 tons of ore milled, producing 3,219 tons leady concentrates; 36,124 tons tailings, producing 13,021 tons zinc concentrates and 53 tons leady concentrates; 3,971 tons leady concentrates, 1,162 tons residues, and 7,006 tons purchased ores smelted, yielding 3,225 tons lead, containing 374,100 ozs. silver and 12,093 ozs. gold; also treated 277 tons zinc concentrates, producing 78 tons spelter.

Tasmanian Copper.—Shipments of ore 721 tons.

United Rhodesia.—Jumbo: 2,579 tons, 1,641 ozs.; tribute 3,600 tons, 564 ozs.

Whim Well Copper.—Shipped 105 tons copper ore, assaying 23 per cent.

COMPANY MEETINGS.

LONDON CITY AND MIDLAND BANK.

Mr. William Graham Bradshaw (deputy chairman) presided at the annual general meeting of the shareholders of the London, City and Midland Bank held yesterday. After expressing his regret at the absence of Mr. Arthur Keen, their chairman, he dealt lucidly with the causes of the recent crisis, remarking that had it not been for the extremely efficient manner in which the Governor of the Bank of England wielded his powers, coupled with the discouragement shown by some bankers to exports of gold, our gold reserves would have been reduced much further than they were. He went on to say that the problem which bankers had to solve was how to retain a larger portion of the metal which came into the country yearly in order adequately to protect the constantly increasing credit of the nation. While undoubtedly high average rates had had the effect of depreciating securities, and of somewhat heavily taxing our industries, yet (with the exception of France, whose rate has not been on an average higher than 3½ per cent.), we had not suffered to any appreciable extent to a greater degree than any other country. For while our rate on an average had been for the year £4 18s. 5d. per cent., that of Germany had been 6 per cent., Russia £7 2s. 5d., of Sweden £6 2s., of Austria £4 17s. 11d. per cent., and of Italy £5 1s. 5d. per cent. Our industries had benefited by the high price of the ruling in other countries to such an extent that our exports had increased from £355,000,000 in 1900 to £518,000,000 in 1907. This increased business has necessitated increased credit, but this credit had been granted for the purpose of carrying raw material and manufactured goods not for the purpose of increasing fixed capital. Referring to their own account, he observed that whilst the bank had now and always had a considerable and very satisfactory business with first-class banks in America it had never made any large advances or granted any large credit on American securities, and in spite of the recent prices bank business there had never been more entirely satisfactory to them than during this last year. They had never had cause for the least anxiety, nor had they lost a single penny in connection with American securities. In fact, the business they transacted with that country was perfectly safe and satisfactory.

UNION BANK OF AUSTRALIA.

The half-yearly general meeting of the Union Bank of Australia, Limited, was held on Monday at the head office, 71, Cornhill, E.C., Mr. Arthur Flower (the chairman) presiding.

The Manager (Mr. Arthur C. Willis) having read the notice convening the meeting and the auditors' report,

The Chairman said: In examining our present accounts we find that our deposits have fallen £200,000 in the six months, following an increase of £1,200,000 in the previous six months, while our advances are higher by some £900,000 than they were in our last account, thus indicating a more profitable employment of the bank's resources. During the same period our expenses show an increase of £5,000, of which increase £2,500 is attributable to salaries paid and £1,500 to rates and taxes. The whole of our liquid and readily available resources in the present accounts, consisting of specie on hand and cash balances, £4,226,000, bullion and advances on bullion, £167,000, money at call and short notice in London, £915,000, balance of remittances and drafts in transitu and bills receivable, London office, £2,450,000, and investments, £1,679,000, amounts to £9,437,000. This, after deducting £100,000 for investments specially allotted to the reserve fund, represents 7s. 11d. in the £ of all our liabilities in London and Australasia, consisting of circulation £514,000, bills payable £1,667,000, deposits £19,153,000, amounting to £21,334,000. Our bank premises, after appropriation of £10,000 in the present accounts, show a reduction of £12,000, from £502,000 to £490,000. Since our last meeting a further extension of our business is shown in our report by the addition of three new branches—one in New South Wales and two in New Zealand. While, as stated in our report, a dry season had been experienced in many parts of Australia as late as November last, and considerable anxiety had been felt owing to scarcity of rain, the position has since then been radically altered for the better, and present conditions there indicated continued prosperity both for pastoral and mercantile interests. A slight decrease in quantity is expected in the wool clip, and prices for wool are at the present time considerably below the exceptionally high values touched during 1907. This, considering the value then current and monetary stringency which has recently prevailed, is not at all surprising, and I think it quite probable that, with an easier tendency for money and continuance of present home and colonial demands, we may see an improvement in values in the near future. As regards wheat, while the harvest is largely in excess of what had at one time been looked for, it is not expected to exceed two-thirds of the previous year's yield. It is a matter of great satisfaction to the directors, as it will, I am sure, be to you, that we should on this occasion, by the addition of £30,000 to the reserve fund, be able to raise that fund to £1,200,000; while, as regards the net results of this half-year's operations, the most satisfactory feature, in my opinion, is that whereas for the last two half-years stress has been laid in our report, and also in my remarks, on recoveries on account of debts previously provided for, on this occasion the results are practically confined to the ordinary half-yearly profits of the bank. Under these circumstances I think you will agree that our shareholders are to be congratulated on the excellent results, and that our general manager and his staff, as also our London manager and his staff, are also heartily to be congratulated on the results of their arduous labours in the bank's interests, and to all these gentlemen I offer on behalf of the directors, and invite on behalf of the shareholders, our very cordial thanks, with, perhaps, a reminder that gratitude is sometimes described as a lively sense of benefits to come. I beg to move "That the report and statement of accounts now presented be received and adopted.

Mr. W. O. Gilchrist seconded the motion, which was carried unanimously. A dividend at the rate of 10 per cent. per annum, and a bonus of 2 per cent., together amounting to £1 15s. per share, were afterwards declared, and the proceedings terminated with a vote of thanks to the chairman, directors, managers, and staff.

HENDERSON'S TRANSVAAL ESTATES.

An extraordinary general meeting of Henderson's Transvaal Estates, Limited, was held yesterday at the Cannon Street Hotel, E.C., to consider the proposed reorganisation scheme. Lord Oranmore and Browne presided.

The Secretary (Mr. W. L. Castleden) read the notice convening the meeting.

The Chairman said that he did not intend, on the one hand, to minimise the difficulty in which they found themselves, nor yet, on the other hand, did he wish to underestimate the valuable assets which they possessed. It would be fresh in the memories of most of the shareholders under what circumstances he first accepted a seat on the board and the chairmanship of the company a little more than a year ago. He found that debentures existed amounting to £102,400, which were repayable with 10 per cent. premium on March 31 of this year. He found that in addition to their properties and shares they had the sum of £108,097 in cash. An examination into the prospects and possibilities of the various subsidiaries in which they held large interests did not disclose any likelihood of these holdings being of assistance to them when the time came for meeting the debentures at maturity. The directors felt that it was of vital importance to the interests of the company that their position as income producers should be improved. Throughout the whole period when the expenditure on the equipment and development of Tweefontein was taking place they hoped that conditions would be such that they could with prospects of success effect a flotation of the property. So far as the flotation was intended to bring relief to the company it failed, and with it the directors' scheme became gravely imperilled. They found they had to pay £40,420 on March 31 next, in addition to premiums amounting to £9,610. The wisdom of offering the £100,000 debentures was considered, and it was ultimately resolved upon, on the ground that, if successful, it would meet all their immediate necessities and give them a certain amount of time, during which there was some chance that markets might favour profitable realisation. The £100,000 of the debentures of the company still unissued were therefore offered by circular, in which the shareholders were plainly told that the money was required to meet debentures falling due on March 31 next, and for the further purposes of the company. The question might be asked—Why did they not underwrite this issue of £100,000? His reply was that their efforts in that direction in regard to the Tweefontein property had been a practical illustration of existing conditions, and they came to the conclusion that underwriters for this could not be obtained. They determined, therefore, that the debentures should be offered to those who were most interested in them, viz., the shareholders. It was by these three operations that the directors had hoped to put the company in ample funds. Had all the operations resulted in success, the company to-day would have had over £170,000 in cash, although the debenture debt would have amounted to £202,000. When, however, it became clear that their scheme for raising capital had been unsuccessful, it was necessary that they should at once take steps to protect the interests of the shareholders, which they believed would be jeopardised by delay, and with the exception of Mr. Henderson the board was unanimous in coming to the conclusion that the fairest alternative for the shareholders was a scheme of reorganisation. With regard to the details of the scheme, the board resolved that so far as compatible with the interests of the company the assessment should be as low as possible, and that the period of instalments should be such as to make the burden on shareholders as light as possible. It might be asked why they were making such a large reduction in the capitalisation. The capital value of their properties was fixed many years ago at a time when South Africa had been passing through one of the great periods of inflation. It was difficult to hall-mark the value of a property on which minerals were known to exist, but on which it was not known whether they were of a payable character. But the main principle upon which the board was agreed was that as the great number of the properties in which they were interested were of an unproductive character, so far as annual income was concerned, it was wise and prudent that they should stand in the books at as low a price as possible. With the smaller capitalisation the shareholders would lose nothing. Their proportionate interests in the company when they came into the reconstruction scheme would be the same as it was before. In conclusion the Chairman stated that it was apparent that a very large number of the shareholders who had given their proxies to Mr. Murray desired that a committee should be appointed to investigate the position of affairs, and to report whether the course recommended by the directors was necessary. In their

circular the board had expressed their willingness to accept the appointment of an independent committee, and in their name he was ready to agree to such a course, on the condition that the committee reported within a fortnight of this meeting, which would accordingly be adjourned to that date.

Mr. J. C. A. Henderson moved that a committee, consisting of at least four shareholders, with power to add to their number, should be appointed to inquire into the present condition and past management of the company.

Mr. Murray seconded the resolution, and proposed that the members of the committee should consist of Mr. W. B. Peat, president of the Institute of Chartered Accountants; Mr. Robert Inglis, chairman of the London Stock Exchange; Mr. Edward Nuttall (Manchester), and Mr. R. J. Nicholas (Cardiff).

Mr. Brown moved as an amendment that the committe should consist of seven members, without power to add to its number.

The amendment was carried by a large majority, as was also a further amendment by Mr. Bastone providing for the names of gentlemen nominated for the committee being sent out to the shareholders, to be voted upon at an adjourned meeting, to be held a fortnight hence. The original resolution proposed by Mr. Henderson was negatived on a show of hands, and a poll was demanded upon this, as well as upon the amendment. The poll was immediately taken, and the meeting stood adjourned for a fortnight.

We are informed that the result of the poll was as follows:—Majority against Mr. Brown's amendment, 577,087; majority against Mr. Bastone's amendment, 545,969; majority for the resolution for the appointment of the committee named, 583,099.

SPARE MOTOR WHEEL OF AMERICA.

The statutory meeting of the members of the Spare Motor Wheel of America, Ltd., was held on Tuesday at Salisbury House, Finsbury-circus, E.C., Mr. Robert Ley Wood (Chairman) presiding.

The Secretary (Mr. L. Newton Vizard) having read the notice convening the meeting,

The Chairman said: I would remind you that at present we are working under royalty because the patents are not yet sealed by the American Patent Office. At the request of the directors I made a journey to the United States for various reasons, and if I have only succeeded in saving the company from the very serious loss which otherwise it would have suffered over the National Bank of Commerce, Kansas City, I think my journey was not in vain. I would remind you that in accordance with the prospectus our American bankers were this particular bank, but I had very wide powers accorded to me by the Board, and when I got there—I cannot tell you exactly why, but somehow I did not take to this bank, although admittedly it was the largest bank in the Western States of America, and, accordingly, I chose as our bankers the First National Bank of Chicago. But there were other reasons why I went. One of the first things that I had to do was to inspect the works and to see that all the legal formalities in connection with the transfer of the freehold works which we had acquired were gone into and perfected. These works are not only well placed but centrally situated, because within a radius of 750 miles we have 75 per cent. of the whole of the population of the States. According to the terms of our agreement with the vendor the works were to be handed over to us replete with every modern requirement for our own purposes. The result is that we have now the most up-to-date set of rolling mills that America can produce, besides multiplex riveting machines, multiplex drilling machines, and other machinery capable of turning out 10,000 wheels a month. In these works we make our own wheel from start to finish, and when I tell you that we could make 10,000 wheels a month by the aid of all these modern appliances with thirty-five workmen, I think you will say that we could not do better in that respect, and our general manager told me that that was the number that he should employ. Moreover, we have sufficient freehold ground to enable us to enlarge the works to many times its present size, if occasion should require, and I feel that we have got our £20,000 worth thoroughly.

Our managing director, at my suggestion, organised a trial. He went to the Chicago Motor Club and asked the President if he might be allowed to test our wheel. The President asked him whether he would submit to any test he liked to name, and his reply was "Yes," little thinking of the test that was going to be submitted. The test was that he was to put it on a car with proper seals put on so that it should not be removed, that he should drive that car from Chicago to St. Louis, where there was an automobile show then proceeding, a distance of 325 miles. Why, you and I would think nothing of doing that in England; but when you come to the roads in America it is a different thing. They started off in a blizzard, with 2 ft. of snow, to go across what are mere tracks across the prairie. They had not gone very far before they found themselves bogged up to the axles, and had to get a horse to get them out, and the strain on the car was so great that the differential stripped, That took fifteen hours to repair, but the Stepney wheel was all right. They started on again; they had not gone very far before, owing to the very great depth of the snow, they could not tell where the track was, and they found themselves in a dyke. They had to hire another horse to take them out of that. They found that very serious damage had been done to the car; and it took another fifteen hours to repair that; but the Stepney wheel was all right. They proceeded, and found that travelling was so difficult that one night when they were a very long way from any habitation, they made themselves as comfortable as they could by the side of the track, and tried to get what sleep they could on the car, open, as it was, with some 20 degree of frost. Still they proceeded, and during this journey all the tyres except the Stepney wheel punctured many times; but strange to say the Stepney wheel did not. However, having started on Saturday afternoon they did arrive at St. Louis on the following Thursday afternoon. I need not say that that car and the Stepney wheel were the central objects of interest. If we had spent £20,000 in newspaper advertisements we could not have got such results, because our managing director cabled us that within seven days of the event he had booked orders for 11,712 wheels—(applause)—and that was on the top of some thousands of wheels that had already been ordered. I consider that the outlook is distinctly bright. We asked our managing director to cable us what the sales amounted to up to Saturday last, and I have it here. I will read it to you just as it comes to us:—"Sales to date, 23,600 wheels, all to be delivered before 31st August; approximate profit on same $340,000." (Applause). That is not bad work, I think, for less than two months' operations. In order that we may see what this really means to us I would remind you that our subscribed capital is £62,000 and that in our prospectus we ventured to state that we might fairly expect on an average 3,000 wheels a month—not that any of us for a moment expected that we could sell 3,000 the first month, but we hoped as business grew we should average 3,000, or, in other words, 36,000 wheels in a year, and yet that in less than two months we have booked orders to the extent of 23,600. Our financial year ends on the 31st August, and therefore you are as good a judge as I am as to what we are really likely to make by the end of our financial year. There is one word more I want to say about our patents. I would remind you that under the prospectus we acquired two Stepney wheel patents; we have since acquired a third at a nominal cost—simply the cost of taking out the patent, which is for most important improvements on the original patents, whereby the Stepney wheel not only becomes a spare wheel, but I think it will solve the question of skidding, and it will prove an anti-skid. We get the benefit of that. With regard to our patents, we heard only last week that we have sufficient claims already allowed under one of our patents to give us a master patent.

Mr. T. D. Grimke-Drayton seconded the resolution, which was carried unanimously, and the proceedings terminated with a vote of thanks to the Chairman and directors.

OMNIUM INVESTMENT.

The 21st annual general meeting of the Omnium Investment Company, Limited, was held on Friday, the 24th inst., at Winchester House, Old Broad Street, E.C., Mr. J. W. Philipps, M.P. (Chairman of the company), presiding.

The Secretary (Mr. J. N. Gunyon) having read the notice calling the meeting and the auditors' report,

The Chairman said: It is hardly possible at the meeting of any financial company for the chairman to avoid saying something on the recent, or present—whichever you like to call it—American crisis. I am able to dispose of that matter, happily for this company, very briefly, because, although in any company it would hardly be possible to say that financial affairs had not suffered because of the troubles in America, we in this company are in the happy position that our total investments in American railway shares are less than 1 per cent. of our total investments. Therefore, you will see that the trouble in America has not caused any great mental wear and tear to your board of directors. (Hear, hear.) There are two matters with which I should like to deal very briefly. One is the matter of valuation and the other is the matter of revenue. As regards the valuation of securities, many of you will be aware that *The Bankers' Magazine* makes a monthly valuation of a long list of Stock Exchange securities, taking the same list month by month. That valuation, taken on January 1, 1908, showed a total depreciation on the whole list as compared with January 1, 1907, of over 9 per cent. In the case of the securities of our own company, the valuation taken on January 1, 1908—which, as many of you are aware, was by no means a cheerful day on which to value securities—showed that our securities were worth less than on January 1, 1907, but the year's depreciation on our securities was less than 2 per cent., which, I think you will agree, is satisfactory. (Hear, hear.) Turning from valuation to revenue, our revenue last year came to £21,400 as against £19,600 in 1906. The percentage of increase in our revenue was between 6 per cent. and 9 per cent., so that I think that you will agree with me that we continue to be a progressive concern. Going somewhat further back, if you go back to the time, 13 years ago, when some of us became connected with this company, you will find that the total revenue in 1894 was £10,900 as against £21,400 last year. That is to say, in 13 years the revenue has been doubled, and it has done so without the employment of any additional capital. (Hear, hear.) Turning to the distribution of the revenue, in 1906 we paid 2½ per cent., we put £3,000 to depreciation, and we increased our balance forward, showing that the earnings on our deferred stock for 1906 were fractionally over 4 per cent. For the year 1907 we propose to pay you a dividend of 3 per cent.; we propose to put £4,000, instead of £3,000, to depreciation account; and we propose to increase our balance forward by £400. These figures taken together will show you that in the past year our deferred stock has earned 5 per cent. I have now, I think, said enough to indicate the position of our company perfectly clearly to you.

Mr. F. H. Simmonds seconded the motion.

Mr. Pethybridge said that the two points mentioned by the Chairman were very satisfactory to the shareholders, but high-

water mark had not yet been reached. He found that in the year 1889 a nett profit of £44,773 was earned, so that the results now reported were not as good as could be wished by original shareholders like himself. With regard to the realisation of securities, in private life, if one wanted money, one would not select for sale those investments which could only be realised at a loss. It was more desirable to make a profit, and investments which could only be sold at a loss one should nurse for better times.

The Chairman, in reply, said that as to nursing assets, they had had some doubtful securities for many years, some of which had been nursed to considerable advantage, but there were plenty of old securities which they were glad to get rid of, and when opportunities arose for disposing of such securities, even at a loss, it was desirable to sell. He thought the policy that the board were pursuing was the right one, and they would continue to pursue it.

Mr. Pethybridge asked a question in reference to the amount of depreciation allowed for, and was invited to see the manager at the company's offices upon the matter.

The resolution was carried unanimously.

The Chairman then moved the re-election to the board of Messrs. A. A. Baumann and F. H. Simmonds, which was seconded by Mr. A. D. MacLaren, and carried unanimously.

The auditors, Mr. Chas. Nichols and Mr. Herbert Lee Nichols, chartered accountants, were re-elected.

A vote of thanks to the Chairman concluded the meeting.

FREEMAN, HARDY, AND WILLIS.

The annual general meeting of Freeman, Hardy, and Willis, Limited, was held on Tuesday at Leicester. In the absence of Sir Edward Wood (chairman), through illness, Mr. H. Simpson Gee presided.

The Chairman, in moving the adoption of the thirty-first annual report, said they all deeply regretted the illness of Sir Edward Wood. They hoped, however, that with rest he would soon be with them again, and he was sure they would all send him their sympathies, with an expression of hope for his speedy recovery. (Applause.) Proceeding to refer to the principal items in the balance-sheet, the Chairman said that, taking the asset side first, they had land, buildings, and fixtures, together with freehold and leasehold shop properties in the Leicester section, amounting to £149,631 as compared with £143,320 last year; in the London section the freehold and leasehold shops stood, at £38,389, as compared with £36,000 a year ago. They allowed £4,427 for depreciation, leaving the total for those items at £242,655 as compared with £232,236 last year. The fittings and fixtures at branch establishments amounted to a total of £77,006 as compared with £81,000 last year, the depreciation allowed being £7,847, leaving the amount at £69,158 as against £72,687. Their trade and other debtors amounted to £9,063, about the same as last year; cash in hand, £755; cash at the bankers, £75,434. The stock in hand at retail branches and at the warehouses was £441,452 as compared with £440,628 a year ago. Then on the liability side their capital stood the same as last year. Their trade creditors were £92,336 as against £72,705 last year. The increase in that item was really due to the larger business done, but as they paid prompt cash for everything he had no doubt that £92,000 had already been wiped out. The debenture interest and preference dividend amounted to £9,025, last year £8,433; mortgages £3,400, last year £4,600; reserve fund £80,000, last year £65,000; reserve for freehold and leasehold premises £12,000, the same as last year; a similar item for London £3,000, superannuation fund £4,335, as against £3,241 last year. The balance brought forward was £8,800, and the balance of profit and loss account was £56,616 as against £61,338, showing less profit by the amount of £4,722. The fact that there were £4,722 less profits was accounted for in one or two ways. In the first place, it was an exceedingly bad summer for the boot and shoe trade in their seaside places. The company had a large number of shops in seaside towns, and, as they knew, most of those towns were almost deserted until September, when they had a little fine weather, and their returns were affected from that cause. Then they had also to contend with the higher prices of materials, both in leather and in boots and shoes, and as business men they knew the difficulty of at once raising the prices of their goods proportionately with the increased cost of materials. It would be remembered, too, that they had closed their London manufactory, which they took over with Rabbits's business. They had discontinued manufacturing in London in order that they might concentrate their attention upon their manufactory in Northamptonshire. The selling out of all the machinery and fixtures resulted, of course, in some loss, and that affected the profits to some extent. He might tell them that the whole of what they did lose was taken out of the year's profits, and nothing stood on that account now. (Applause.) He might add that while the profits had been less their turnover had been considerably larger this year, which in itself was very satisfactory. They were now experiencing a very considerable demand for their own manufactured goods, and they were extending their Northamptonshire manufactory, which, under the able management of Mr. North, had done very well for the company. The report showed that the nett profit for the year was £56,616, which with the sum of £8,800 brought forward made an available balance of £65,416, which the directors recommended should be dealt with in accordance with the resolutions to be submitted.

Mr. R. Hyslop, in seconding, said the directors were happy to be able to assure the shareholders that the business was never in a healthier or better position than it was to-day.

There was no discussion on the report, which was adopted unanimously.

Resolutions for dealing with the available balance in the manner set forth in the directors' report were then agreed to, and the proceedings terminated with votes of thanks to the chairman, directors, management, and staff.

M. HYAM WHOLESALE CLOTHING CO., LIMITED.

The directors of this undertaking make a show of telling the shareholders something about the business done during the past year, but the actual information given throws little or no light on the position. Sales, we are told, show an increase in the country and a small reduction in London, and while the returns in one of the colonies was more than doubled there was a substantial decrease in the South African trade. The last-mentioned would seem to have had most bearing on the result as nett profits amounted to no more than £3,921, a miserable figure for a company having a paid-up capital of £155,000. With £208 brought forward the disposable total was £4,129, and of this the managing director's remuneration and directors' and auditors' fees absorb £1,384. Out of the balance a payment of £2,000 was made in July on account of arrears of preference dividend, leaving two years, or £8,000, still outstanding, £400 is written off plant, &c., and £274 is transferred to an income-tax reserve, leaving a much reduced balance of £71 to be carried forward. Freehold and leasehold premises less a mortgage of £10,911 are valued at £53,859, and plant, &c., after allowing for the sum now written off is £251 up at £10,711. Against these two items the only accumulation is the leasehold redemption fund of £9,838 represented to the extent of £3,936 in various Colonial Government securities taken at cost. Stocks seem fairly heavy at £55,909, and goodwill at £39,649 is out of all proportion to the business done, while there is another intangible asset in the shape of a suspense account of £2,437. Trading balances are moderately favourable, sundry creditors amounting to £29,837 against £31,453 to come in from sundry debtors and £2,163 in bills, but the company has borrowed £7,500 from its bankers on security of the property, and cash is poor at £2,819.

HYAM AND CO., LIMITED.

Profits on trading for the twelve months ended November 16 rose by £2,115 to £14,036, but receipts from rents, interest, &c., were smaller, and in spite of credit being taken for £176 or about £100 more on account of income-tax, the gain in the total revenue was only £1,827 at £15,328. After meeting administration expenses, including £091 for chairman's and manager's share of profits, providing for depreciation and leasehold sinking fund, and writing £296 off investments, the nett profits were £1,192 larger at £12,579. With £2,187 or £1,387 more brought forward, the disposable balance came to £14,766 against £12,187, out of which the directors pay an extra 1 per cent. at 7 per cent., and raise the sum carried out by £1,830 to £4,017. Expenditure on freehold and leasehold property during the year was £2,191, making a total of £04,095, fixtures, &c., less depreciation, show an increase of £323 at £10,906, and goodwill is still at its original figure of £13,171. The only accumulation against these is the leasehold sinking fund now amounting to £4,264, a sum which seems decidedly meagre, especially as the directors are asking the shareholders to approve of the rebuilding of the Wells Street premises and of considerable alterations to the Oxford Street premises. Floating liabilities have risen by £1,815 to £11,304, but on the other hand debtors are £2,511 up at £27,217, stocks are valued at £38,162 or £1,792 more, and cash is £1,005 higher at £2,807. Investments, however, have been reduced by £1,925 to £24,075.

The Bank has over 450 Branches and Sub-Branches in London, the suburbs, and throughout the country. It also has Agents in all the principal Cities of the world.
Every kind of Banking business is transacted at the Head Office and Branches.
Bills, Annuities, Coupons and Dividends are collected in all parts of the United Kingdom, the Colonies, and in Foreign Countries.
Purchase and Sale of Stocks and Funds are effected.
For the convenience of Customers, monies can be paid in at any of the Branches and advised the same day to their own account.
Strong Rooms are provided for the security of Deeds and other property lodged by the Customers of the Bank.

THE FOREIGN EXCHANGE DEPARTMENT.

Telegraphic Address—"Cinnabar, London." Telephone—2481 London Wall.
ISSUES Currency Drafts on all Cities, Circular Letters of Credit and Circular Notes payable all over the world; also makes Mail and Telegraphic Transfers to all Cities.
COLLECTS Foreign Bills.
PURCHASES approved Foreign Bills.
ESTABLISHES Commercial Credits on behalf of Customers available anywhere against the usual shipping documents.
Drafts, &c., may be obtained direct from the Head Office or Branches, which are always ready to give quotations.

THE SHIPPING DEPARTMENT.

Telegraphic Address—"Cinnaship, London." Telephone—2481 London Wall.
Is specially organised to look after Shipowners' Freight Remittances from, and Disbursements to, all parts of the World by mail or cable.

DIRECT UNITED STATES CABLE CO., LIMITED.

So far from deriving any benefit from the recent excitement in the United States, this company appears to have suffered a loss of revenue. Its total income from all sources, less the usual £5,000 paid to the Anglo-American company, was £2,112 smaller at £58,268, and as expenses could only be reduced by £278 to £25,103 the nett surplus was £1,834 down at £33,165. The balance of £2,516 brought forward was also considerably smaller, giving a total of £35,681 for distribution compared with £41,316 a year ago. This drop, however, does not prevent the directors from paying the usual quarterly dividends of 4s. each, and as they put £5,000 to reserve against nothing, the sum carried out is reduced by £10,635 to £6,397. In addition to the transfer from revenue the reserve is credited with £9,195 from interest on investments and £499 from profit on sale of securities, but £5,097 is charged to the fund for maintenance of cable, leaving a balance of £501,565 or £8,430 less than a year ago. Investments after deducting the £40,000 written off on June 30 for market depreciation are only £9,186 lower at £487,930, and spare cable in hand has been reduced by £513 to £11,088. Traffic and other credit balances amount to £8,833 against £19,160 to come in, but cash has dropped by £4,476 to £15,960.

LONDON TRADING BANK, LIMITED.

The directors state that a considerable number of new accounts was opened during the six months ended December 31, but the additional resources thus placed at their disposal do not seem to have reached any important total. Current, deposit, rediscount and other accounts all told only show an increase of £3,071 at £75,771 compared with the corresponding half of 1906, and are £2,971 more than in the immediately preceding six months. On the other hand, bills discounted and advances are £5,183 up at £91,067, but cash is slightly lower at £8,280. Investments are unaltered at £24,381, although this sum includes £5,000 Consols and £4,000 2¾ per cent. annuities at par and £15,100 L.C.C. 2½ per cent. stock at 94½, and the depreciation is therefore considerable. Gross profits rose by £109 to £3,989, and £24 more at £733 was brought in, making altogether £4,722 against £4,589. On the other hand, current expenses were £58 heavier at £1,612 and interest took £1,011, and after providing the usual £25 for depreciation of lease another £250 is added to reserve, raising it to £8,000, and £62 is again written off formation expenses. The dividend at the rate of 5 per cent. is then repeated, and as it requires a little extra for the new capital the addition to the sum carried out is only £32 at £769.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 526. SATURDAY, FEBRUARY 1, 1908. (Registered as a Newspaper.) Price 6d.
New Series.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year · £1 1s. Six Months · 11s. Three Months · 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Government Programme.

It is much, if not altogether, what the nation was led to expect, and may be described as a programme well calculated rapidly to exhaust the popularity of the present administration. Mr. Balfour complained that it was too crowded with measures, and the only retort Mr. Asquith could make to this was that it was the duty of the Government to fulfil its pledges. This is no doubt true, but we cannot help wondering what sort of programme would have been put forward had the severe financial strain through which the country has just passed culminated in an old-fashioned panic, and the failure of two or three of our banks. Would it have been possible, in the circumstances such a calamity would have plunged the country into, to have put forward a series of measures so many of which may be said to involve an augmentation of the national budget? With the exception perhaps of the Bill to regulate the hours of underground labour in coal mines, and the amendment of the law relating to the protection of children, together, perhaps, with the Bills relating to Scottish land and valuation, which are to be reintroduced, there are few proposed measures of first-class importance that do not involve the spending of more money. Assuredly the suggested licensing law amendment, to be applied to England and Wales, must involve increased taxation if it is to be worth the trouble of discussing, and in all probability the amendment in the law relating to elementary education must have the same consequence. Presumably the object sought is the elimination of sectarianism from all State-supported schools, and if this is successfully accomplished it will mean an indefinite additional amount of public money devoted to the maintenance of a secularised national system of schools. The legislation relating to the housing of the working classes and the regulation of land-owning around growing urban centres also implies additional drafts upon the public purse, and we cannot be at all sure that the Port of London Bill will not bring some further burden upon the Metropolitan ratepayers. From our point of view, therefore, the prospect is not so cheerful as we should like to see it, but the probability is that, notwithstanding its eagerness for work, the unbusinesslike habits of the House of Commons will effectually intervene to prevent the passage of several of these suggested measures of reform. Over the Licensing Bill alone a long and bitter wrangle is to be expected, and it will require all Mr. Burns's Parliamentary adroitness as a pilot to push through the measures for alleviating the condition of the working classes in towns. Another highly contentious measure is suggested in the proposed Bill to amend the valuation of property in England and Wales for the assessment of Imperial and local charges. In itself this may be an excellent measure, but in proportion to the thoroughness of the reform suggested will be the doggedness of the Opposition.

And we missed from the King's Speech setting forth the Government programme any syllable promising retrenchment. It is all reform, reform, and let the taxpayer pinch and pay. Yet the earlier portion of the speech is full of assurances of the harmonious temper amongst the great Powers. At no point is there the

slightest indication of impending strife, and what King Edward was made to say Admiral von Tirpitz, the German Minister of Marine, echoed in the most emphatic language. He was repelling in the Reichstag the charge made that the emulative building of vessels of war by the Kaiser's Government was directed against England, and frankly admitted that this policy was merely an imitative one. "We are doing nothing more than follow, as far as is fitting for us, in the steps of other sea Powers." And he proceeded emphatically to repudiate any thought of hostility towards England. "I know," he said, "of absolutely no conflict of interests anywhere in the world between England and ourselves which would in the least be remedied by an appeal to arms." This being so, why is it that our zealously reforming Government—and it is that—a Government most solicitous to fulfil its pledges and to placate as many sections of its supporters as it possibly can, has never a word of protest against the ruinous waste of public money in the maintenance and increase of armaments during a time of profound peace and goodwill amongst the leading Powers? What are we aiming at, and when will the goal looked forward to be reached? Another £1,000,000 at least is wanted for the Navy in the coming fiscal year, for no good purpose whatever that we can see. Upon a subject of this kind, the most vital of all to the country and to the Empire at the present hour the King's Speech is absolutely silent. It is, we are persuaded, fully in the power of the present Government to set a new fashion by abating the ship, fort and dock building mania, and assuming a pacific attitude towards our dear friends the enemy, who is about to invade us, according to the irresponsible ravings of demented cranks, and thereby to bring about a healthier financial *régime*, not only at home but throughout Europe. Instead of taking this course, the Government is to be busy applying plasters to the social wounds, product in great measure, if not entirely, of riotous administrative extravagance.

Undeterred by any warning or the experience of other countries, Mr. Asquith is about to begin a system of old-age pensions, which will almost at once involve a charge upon the taxes much in excess of any money available. He is doing this, too, without giving the slightest hint that an attempt will be made to remedy the glaring anomalies of the existing Poor Law. Some say that £6,000,000 to £8,000,000 will forthwith be absorbed in this direction alone, and the amount will soon be three times £8,000,000 if the demands of the weak-kneed, clamorous Socialists and other "lean-to" classes of society are to be gratified. We know of no step less warranted by the facts than this one is, less beneficial to the community or more likely to intensify the already existing social distress. We are always told that the colonies of Australia and New Zealand have instituted old-age pensions, and opportunely the *Financial Review of Reviews* for the current month contains some descriptions of these colonial pensions systems from the pens of competent writers. A study of the essays of Mr. Pember Reeves and Mr. Coghlan should, however, convince all but the fanatical that there is little analogy between the conditions prevailing in these colonies and here. To begin with, as Mr. Coghlan points out, there is no Poor Law in any part of Australasia, and therefore the pensions systems established there can be regarded as the State's substitute for this costly method of providing insurance against social revolution which has cost successive generations of the British people such enormous amounts of money. And there is another lesson these essays convey, viz., that once begun there is no limit to the demands of the pension fund. Victoria, indeed, does fix a maximum amount beyond which the budget is not charged with this burden, but not New South Wales or New Zealand, and already the New South Wales pensions burden has risen to about 7s. 6d. per head of the population. During the past six years the pensions charge has ranged between £489,000 and £525,000, and this although Asiatics are carefully ruled out from any benefit under the law in all the colonies. The New Zealand load has also gone up from £127,319 in 1899 to an estimated £335,000 for the current year. This is partly because the amount claimable by every pensioner has been raised. The very fact that these new countries, untrammelled by feudalism, with a land open for their settling, possessed of every natural advantage, should already be burdening the worker, the taxpayer, with a charge of this kind is significant enough of the way their affairs have been mismanaged. Putting that aside, however, there is obviously no analogy between colonial pensions and a similar drain upon the taxpayer in this country, a drain superimposed upon the exhausting demands of the Poor Law. Two of the papers in the *Financial Review of Reviews* deal respectively with the pension systems of Belgium and Germany, and they are also worth study were it for no other reason than that they show a steady upward tendency in the charge upon the public revenue, notwithstanding various limitations and the wise provision that the State is only to contribute a portion of the sum required, and that such portion is dependent upon the amount of the contributions made by the working classes themselves. In spite of this, however, the charge borne for pensions in Germany has risen from £320,000 in 1891 to £2,263,500 in 1904. In Belgium also the charge between 1900 and 1906 inclusive has gone up from about £60,000 to £188,000. Facts such as these ought to be a warning to our Government to leave this thorny byway of reform untrodden for the present, and we must frankly tell it that perseverance with a measure of the kind suggested in the King's Speech will much disturb influential classes of voters throughout the three kingdoms.

The Speeches at Bank Meetings.

As was to be expected, the tone of the speeches at the half-yearly shareholders' meetings of the joint-stock banks and discount companies has been one of cheerfulness, not to say self-congratulation. This is an allowable feeling in the circumstances, for there can be no doubt that our banking institutions have withstood the storm of the last two months of 1907 with reassuring equanimity. As Mr. Yorke said at the London and Westminster Bank meeting, it was one of the most difficult and trying half-years for banks within the memory of living man, and there was never the slightest ruffle in the credit of any one of our banks. Rumours, indeed, were much less rife in the end of last year than in the end of 1906, when talk was abundant about the over-commitments of some banks in advances to New York and in the United States accommodation paper. Nothing of the kind occurred this time, and the difficulties the banks had to encounter arose altogether from the cross currents of the Money market. Their position is lucidly described by Sir Felix Schuster in his optimistic speech. Optimism is justifiable in the circumstances, and, as might be expected, Sir Felix does not neglect to inculcate caution or to indicate the drawbacks to any immediate return to pre-panic conditions in trade; but we fear he looks for a more rapid recovery than the facts warrant. Our advices from South Africa, for instance, do not confirm his view that a prosperous state of business is again being established there. Moreover, trade and industry, the productive works of the United Kingdom, have not yet suffered to any disquieting extent through the falling off that has taken place in America, but the wave will spread for some time to come, and on the Continent, especially in Germany, as well as here, recoil and stagnation seem likely to be with us all this year.

Let us, however, return to Sir Felix Schuster's description of the Money market. During the past half-year, he said, they had had the phenomenon of the rate of discount in the open market being sometimes above that of the Bank of England, while short money was difficult to lend. The average Bank rate for the six months was £5 3s. per cent. or about 11s. per cent. higher than in the corresponding half of

1906, but the market rate for three months' bills was only about 6s. per cent. higher. Then, again, the average deposit rate was £3 4s. per cent. or about 6s. per cent. more than in the second half of 1906, whereas the rate for day-to-day money was only £3 3s. per cent. or 7s. per cent. less. Therefore, while banks were paying more for their deposits, they actually received a lower rate for short money than in the corresponding period of the previous year. Then he goes on to point out much on the lines followed in these columns last week, high rates lead to a decreased turnover, to a reduction in customers' balances, and to the transfer of funds from current to deposit accounts, or to their withdrawal for employment elsewhere, so that altogether dear money does not necessarily or generally mean high profits to the banker; and it is just as well it should not, because, as Sir Felix aptly said, excessively high rates are hurtful to the customers of the bank, and the interests of bank and customer cannot be divergent. Bankers can only prosper when trade is prosperous, and trade cannot be really prosperous when it is paying more for its business accommodation than the profit on the overturn may allow the trader to recover.

Dealing with the gold, Sir Felix Schuster had also some facts worth repeating to bestow upon his shareholders. The year's figures of gold movements, he said, were on an exceptionally large scale, showing total exports of £50,800,000 and imports of £57,000,000, of which South Africa contributed no less than £29,500,000. In spite, therefore, of the recent heavy demands from the United States, which took nearly £14,000,000 away from us in November and £3,500,000 in December, we actually gained more than £6,000,000 in the metal on the whole year's movements; and it may be added the exports and imports of gold shown in the United States returns are of an equally singular description, for notwithstanding the exceptional imports just mentioned for November and December, the whole year's receipts of the metal in New York were about £5,331,000 less than for 1906, the total being only £13,336,000 as against nearly £18,700,000 in the preceding year. Exports, it is true, were larger last year than in 1906 at about £7,400,000 compared with £1,216,000, but this merely serves to emphasise the fact that the United States took less gold from abroad during 1907 than it did the year before.

About most of the other speeches there is little of a distinctive sort to be said. Their chief characteristic is found in their harmony. All the chairmen sang the same tune, and for the rest dwelt principally upon the distinctive characteristic of each bank's business, emphasising the development and prospects of trade in their own particular spheres. But we are glad to record the fact that Mr. Spencer Phillips, in presiding at the meeting of the shareholders in Lloyds Bank, paid a handsome, if limited, tribute to Free Trade. Whatever the benefits upon communities untaxed industries might or might not bestow, there could be no question in his mind of the value of a free gold market to the banking trade of the United Kingdom. This is a handsome testimony. A praiseworthy remark was also made by Mr. Cecil Parr at the meeting of Parr's Bank. This gentleman may be said almost to have gone out of his way to pay a tribute to the high character of the United States as a nation. This was well, for the worst side of that nation is usually presented to us here. We are ever occupied with the financial malpractices of a limited class of the citizens, and do not always stop to remember that the inarticulate millions of the Republic are the victims of these malpractices quite as much as, or more than, we in Europe are. At the same time, while we fully agree with all that Mr. Parr said, it has to be recognised that the cruel system of Protection under which the business of the United States has been conducted for more than a generation has tended to warp the moral sense of the entire people in trade and industry. Protection brings about the triumph of dishonesty to such an extent as to unconsciously colour and sway the moral tone and attitude of the people at large. They learn to submit to being victimised without murmuring, to wear shoddy clothes, to fill their houses with gim-crack, unsubstantial furniture, to accept in everything the semblance of good instead of the reality. Of this unwholesome change in the mental characteristics of the nation we think there can be no doubt at all. Essentially as honest as any people in the world, possessed of high ideals in many directions, they are none the less tamely acquiescent in business immoralities of every description which it would take at least a generation of hard drilling to make our people submit to.

Upon the optimism indicated more or less in all the speeches at bank meetings we shall not now pronounce judgment further than to say that it is the after effects of a crisis which try the stability of credit and the recuperative capacity of industries. Because that is so, we are disposed to regard this year 1908 as likely to be considerably more trying than last year in spite of the anxieties amid which it closed. And already we see some of the effects of the credit tempest beginning to manifest themselves in the United States. Sinister events will continue to emerge there, and for that reason alone we fear the revival hoped for and prophesied by speakers at bank meetings may be postponed for at least many months. We cannot be even sure that cheap money is going to stay with us long, notwithstanding the probability that the business requirements in the way of credit are likely to be much reduced everywhere this year, because the loan raising and company manufacturing industries may soon reach a degree of activity great enough to neutralise the benefit accruing to business through the abundance of supplies of banking credit in the open market.

Economic and Financial Notes.

The Agitation Against the Income-tax.

One cannot help paying a compliment to the astuteness with which the Protectionists are laying out their trenches and planning their underground approaches and mines in order to carry the Free Trade position by assault. They have not been particularly successful with the city populations in any part of the kingdom, where a little intelligence exists and prevents falsehoods about prices and the effects of tariffs from being swallowed dog fashion, but the farming class is undoubtedly captivated more and more by the idea of keeping out foreign corn by a tax and other suggested measures calculated, they are told, to give them a more exclusive market and higher prices. For all that, the mere Protectionist campaign has not been strikingly successful as yet, so another line of attack had to be selected, and with no small skill the income-tax was fixed upon. A meeting was held in the Cannon-street Hotel last Monday by a body called "the Income-tax Reduction League," and it was attended by many people we should expect to see there, including a considerable contingent representing the landed interest, and a good many bankers and others we should have thought better occupied elsewhere, among whom was Sir Felix Schuster. The great speech at the gathering was made by Viscount St. Aldwyn, better known as Sir Michael Hicks-Beach. That gentleman is always candid and perfectly honest in his attitude towards the party tactics of the day, and he did not desert his character on this occasion. "It might," he said, "seem strange that one who had held the office of Chancellor of the Exchequer, and in that position had raised the income-tax to the highest point reached in the last 50 years should be there"; but he succeeded in justifying his loyalty to the party with no difficulty at all, for Lord St. Aldwyn is nothing if not loyal to what he believes to be the interests of his party, or of the dominant spirit therein. But while we can compliment him in this respect it is difficult to follow his reasoning on some points. It was, indeed, the old argument that income-tax is a war tax, therefore when peace comes it ought to be reduced. That would be a most excellent doctrine if we had a peace expendi-

ture, but what we now have is a war expenditure in time of peace, and until that can be abated it is merely a move in the Protectionist campaign to get up an agitation for a lower income-tax. Much effective play was made by a speaker so expert and able as Lord St. Aldwyn against the phantasies of the amateur tax reformers who talk of "drawing £30,000,000 per annum" out of the incomes of people who enjoy more than £5,000 a year, and his gibes at Socialism were of a sort that all lovers of commonsense would enjoy; but his argument failed to convince those who look for a reduction in taxation through a reduction in the demands made upon the nation by the Government. If these gentlemen, therefore, would join genuine reformers in pressing upon the Government the advisability of reducing the National Budget so as to release, say, £10,000,000 as a start, we should join most heartily with them in pressing for a lower income tax. But as expenditure stands, and with further increases in prospect, any reduction in the income tax must be replaced by indirect taxation, which is just what the gentlemen behind this latest move are aiming at. Supposing the income tax were brought back to the figure it stood at before the South African war, for the waging of which Lord St. Aldwyn, as Chancellor of the Exchequer, provided £10,000,000, thinking it enough, viz., 8d. in the £, what would take its place if the Chancellor of the Exchequer still required from £120,000,000 to £130,000,000 to be provided by the taxpayer? "A tax on corn, for one thing, the main thing," the great majority of those at Monday's meeting would answer, and a tax on corn, on meat, and on many things besides it would have to be.

Swedish Finance.

So far as the great usury markets of the world are concerned, Sweden is in a happy position. It rarely comes to borrow, and when it does it gets the best of terms, thanks to the unostentatious character with which the finances of the country are administered. No hurt at all appears to have arisen to these finances through the severance of Norway. Hardly any mention of this momentous looking change is made by Mr. G. H. Dering, Secretary to his Majesty's Legation in Stockholm, in his report on the finances of Sweden for the past two years. The revenue seems to be gathered in as usual, and estimates for the current year point to what may be called the natural increase. Accounts are made up in a peculiar way by the Swedish exchequer, and Mr. Dering writes as if the general exhibit of revenue and expenditure left out of account the Treasury charges for the debt, but an examination of his figures appears to indicate that what the National Debt administration puts out is merely a summary table of its income and outgo as an appendix to the general accounts of the Treasury. The money these commissioners handle must come from the revenue, and all it does is to disburse that money and to handle any loans raised for public works or other purposes. Most of the debt of Sweden has been raised for undertakings calculated to benefit the community and perhaps to yield a profit, for Sweden has happily been saved from wars these many years back. Its total debt, therefore, only amounts to about £24,000,000, of which £20,750,000 consists in the funded debt outstanding. This is a comparatively small burden for a country whose revenue from direct and indirect taxation in 1905 was £7,705,000, and whose estimated income from the like sources in the current year is put at considerably more. Of the various heads of income, the largest is Customs, which yielded in 1905 about £3,350,000 or £434,000 more than the estimate. The income-tax gave only £708,000, but that was £125,000 more than the estimate, and the brandy tax produced £134,000 more at £1,561,000, so that the country must have been prosperous in spite of its hard drinking, and it appears to continue so. Apparently railways yielded £761,100 nett in that year, or an increase of £206,100. Most of the taxation, however, is indirect, and the leading sources of revenue are reasonably elastic. Thus for last year and for the current one the income-tax is expected to yield more than £700,000, and an increase of £200,000 is looked for in the Customs revenue for each of these years. In like manner the railway receipts are growing, and the Post Office is reckoned upon for more than £1,000,000. Mr. Dering does not give us much information about the nature of the duties imposed upon brandy, beet sugar, malt, or punch, but they are probably small compared to ours, and the income-tax must be a very light one to give little more than £700,000 from a population of 5,295,000. The capitation tax is about 5d. for every male and 3d. for every female, and has to be paid by every able bodied person over 18 years of age. It yields less than £50,000. The entire taxation worked out for 1905 at £1.226 per head, which shows Sweden to be one of the most comfortable countries in the world in this respect, and all its outlay seems to be of a modest description. It has not yet begun to build a navy against Germany, nor to raise an army to reclaim Finland or the Baltic provinces of Russia for the Swedish Crown. Happy Sweden!

"Huddled History" and the "Times."

Whatever may be happening in regard to the ownership of the *Times*, nothing is yet changed in its Americanised habits of business. It still insults its former friends and best supporters, the publishers, by the notice peppered over the pages of its otherwise excellent weekly Literary Supplement inviting its readers to cooperate with it in defeating "the publishers' Trust" by boycotting nett books, and it has resumed the "Pink Pills" hoarding style of advertisement whereby it is endeavouring to repeat the ruin-bringing "success" of the old "Encyclopædia Britannica" sale. Its conductors seem to have learned nothing from their experience. The more is the pity. And about this anthology of history now being thrust before all eyes, we should like to know whether the book has not been before the public in the United States for some two years back, and whether success has attended it there. Our information is not over-favourable to it as a "catch on" even in America among the classes who never buy books with intelligence or at all except when bounced into parting with their money. But any way, the experience of the British public is too recent to incline it to be caught again by the same kind of lure again just yet. Not only does it possess encyclopædias galore to swear or mourn over, heaps of uninviting printed matter occupying inconvenient spaces in living-rooms and drawing-rooms, where the special book-case is usually in the way, and the volumes in which are never disturbed from one year's end to another except for an occasional dusting, but it has tens of thousands of similar lumpy and repellently unhandy possessions issued through other channels in the "hurry up with your deposit," "last chance," fashion set by the *Times*, and has no room or stomach for more! The second-hand book catalogues are eloquent of what this kind of success has meant for the public, and for the newspapers who lent themselves to raids of the sort upon that slender proportion of the people's earnings devoted to the support of the regular bookseller. We should not like to offer £5 a set for the "Encyclopædia Britannica" "as good as new" lest we should get it. A correspondent in the country who keeps a watchful eye on this kind of enterprise sends a suggestive cutting from a second-hand catalogue, which runs thus :—"Lloyd's International Library. Cost £9; condition as new, £3 17s. 6d.," and we should imagine that Messrs. Lloyd also have reason to regret that they ever allowed their names to be mixed up with such a business. The disgust excited in the minds of readers of their papers cannot but have had an adverse influence on their popularity. Even the *Daily Mail* has suffered, we hear, and as for the *Times*, one can only say that it is pitiful to behold the pass it has come to. If it persists, in spite of all warnings and a bitter experience, the day cannot be far off when its transfer to new owners will be a matter of no difficulty at all, except the difficulty of finding people willing to buy. A newspaper ought never to be mixed up with an

undertaking that enters into competition in any way with its advertising *clientèle*, because whatever profit it may at first derive from this new source of income will soon be more than counter-balanced by loss of profit in its legitimate business. Just think what the Book-club alone must have cost the proprietors of the *Times*.

The Suspension of Parliament in Argentina.

Disagreeable news comes from Buenos Ayres. The Executive Government has forcibly closed the session of Congress and sent deputies and senators about their business. Were such a thing to take place in any European country, except Russia and perhaps Austria, fears of internal convulsion would be excited, but no immediate upheaval is to be expected in Argentina, for, in spite of the machinery of a Parliament, genuine representative institutions can hardly be said to have reached much more than a rudimentary stage there. The election of deputies is a comic performance, and probably only less visibly corrupt than elections in the United States of North America because there are fewer dollars available. None the less does an arbitrary looking course like that adopted by President Alcorte and his Cabinet appear to threaten future trouble. Details of the origin of the difference which has led to the dismissal of the Parliament have not yet reached this country, but it must never be forgotten that there is a permanent cleavage in Argentina between the great province of Buenos Ayres and the multitude of more or less poverty-stricken provinces of the interior. In all there are 15 provinces and 10 territories embraced in the Federal Republic, and the population of the province of Buenos Ayres (including the city of that name) is about equal to that of all the rest of the Republic put together. After the last civil war these sparsely populated interior provinces virtually became masters of the country and its destinies. The city of Buenos Ayres was torn away from its province and made the capital of the federation, and favours, place, advancement of all kinds became the spoil of the visitors. The "Porteños," as the Buenos Ayres people are called, have never accepted this defeat with equanimity, and regard themselves as the victims of the hungry interior. One day possibly there will again be a conflict for the mastery, and the political tension indicated by the high-handed looking act of the Central Government may perhaps be taken as a hint of trouble ahead of a more serious character. But we do not know that this trouble need ever again assume the character of warlike encounters. It seems more likely to take the form of interludes of irresponsible and more or less dictatorial rule such as that now temporarily established, because the interior of the country is filling up with immigrants from Europe, who have no share in the political traditions of the nation, and whose labours are rapidly transforming the more or less desert territories into perennial sources of wealth. The worst obstacle, however, to the removal of causes of dissension, other than that dwelling in metropolitan and provincial rivalries is to be found in the overgrown cities which tend to become centres of political ferments, thus keeping alive passions that had better be allowed to die out. From this point of view Buenos Ayres city itself might easily become a source of disquietude, and we fear it was a tactical blunder to raise it to the position of the federal capital. Even so there appears to be no ground for immediate anxiety, for the forces making for order are in the ascendant, and seem likely to continue so while the country prospers.

Frozen Meat Supplies in 1907.

For the 20th year in succession Messrs. W. Weddel and Company have issued their valuable annual report on this important branch of our import trade in foodstuffs, and, as usual, it is accompanied by very full and graphic charts showing how from a small beginning the business has grown to huge proportions. The most notable characteristic of the trade in mutton and lamb was the exceptional increase in shipments from Australia and New Zealand, which exceeded all previous records both as regards the rate of expansion and the total quantity received. Imports of mutton from all sources totalled no fewer than 5,991,535 carcases, or an increase of 662,474, of which Australia contributed 381,945 and New Zealand 211,579, while South American supplies, even with the aid of larger shipments from Uruguay and Patagonia, only rose by 88,953 carcases. Arrivals of lamb were 928,061 carcases larger at 4,348,992 carcases, Australian supplies amounting to 223,058 more at 1,397,554 carcases, and New Zealand imports to 437,593 more against an increase of no more than 7,000 from the River Plate. With regard to beef, the very marked decrease of 89,362 head, or 28,723 tons, in importations of live cattle from North America entirely wiped out the expansion in receipts of frozen and chilled beef, and left a large deficit in the quantity available compared with the previous twelve months. The condition in which frozen meat was landed here was satisfactory, but the chilled beef from South America left much to be desired. An improved method, however, of preserving chilled beef, by which is meant beef carried at a temperature of 29 degrees to 30 degrees Fahr. and arriving in a soft condition, has been discovered, by the use of which the beef arrived from Argentina in perfect condition after being kept on board ship for 45 days.

A very great increase took place in the consumption of lambs at relatively high prices, owing in great measure to the prosperity of the industrial classes. Along with this, however, the demand for mutton was sluggish, especially for Australian and River Plate supplies, notwithstanding a moderate level of values and the scarcity and dearness of home-grown mutton. It would seem that with the growth of business in frozen meat the conditions of the trade are gradually changing. More and more each year supplies are being sent direct to provincial centres, and the quantity actually passing through Smithfield is steadily declining. The demand throughout the country was sufficient to absorb at fairly full prices the increase of 36,832 tons of frozen meat imported, and although supplies on spot and afloat were always ample, there was never any undue accumulation of stocks. Notwithstanding these favourable conditions, however, Messrs. Weddel are doubtful if the year was a prosperous one to any engaged in the trade except to the grower. Live stock, they say, was dear in all countries of production, and left little margin for the freezing companies to work upon, while market prices were generally too high to leave retailers in the United Kingdom more than a very bare margin of profit. The high wholesale prices were the more severely felt by butchers, as frozen meat did not participate in the rise of retail prices of many descriptions of food, a fact which afforded one small crumb of comfort for the poor consumer.

The Latest Rand Amalgamation.

It affects the Knight Central and South Knights companies, and possesses one or two uncommon elements. Of course, it is greatly in the interests of both companies, that much goes without saying, and we trust each side will be equally satisfied. It matters little, we fear, whether they are or not, because these Rand amalgamation schemes are arranged by the controlling interests in such a way that the independent shareholders have no voice in the matter. However, the circular issued to the shareholders of the Knight Central states that in the opinion of the board the company has arrived at the stage when it would be justified in starting milling operations. Payable ore reserves are estimated at 282,102 tons, and the consulting engineer considers that these can be considerably augmented at small cost, as in many cases drives have been stoped in ore of good value. This was done in order to conserve the company's resources, which a couple of weeks ago amounted to £50,000. That is a fair sum, but not sufficient to continue development and provide for the installation of a reduction plant, so more money must be secured. How can this be done? Possibly the directors meditated long and deeply on the problem, or may be a fixed idea has been in their minds for a long time, but, in any case, they consulted with

the directors of South Knights, which lives next door, and arranged for the purchase of that undertaking, lock, stock, and barrel. South Knights has almost £300,000 in cash, and the purchase consideration for the entire show (the company has 450 claims) is 375,000 Knight Central shares. Now comes a curious provision. Of the 375,000 shares to be handed over to South Knights to clinch the bargain, that concern has agreed to offer to the Knight Central shareholders 105,000 at par, being in the proportion of one new share for every five held. Why is this being done? It does not mean money for the amalgamated concern but for somebody else, and it would be most instructive to know who is so anxious to get rid of the Knight Central shares. The fusion plan involves an increase in the capital of Knight Central from £525,000 to £900,000, and the £300,000 which South Knights brings into the company's coffers is estimated to be sufficient for all requirements. When formal sanction to the proposals has been given the directors will immediately order a reduction plant, consisting of 100 heavy stamps and three tube mills, with necessary cyanide plant and buildings, the erection of which should be completed by January 1 next. The development of the mine will also be pushed on as rapidly as possible with a view to increasing the stamping power as soon as the ore reserves may justify that course. Put in a nutshell, the position is that the Knight Central has a more or less developed mine with insufficient resources to go on, while the South Knights has plenty of cash but an undeveloped property. So the former, in order to get hold of the money must agree to share with the other concern the benefits of the considerable amount of work accomplished. This must mean considerably reduced dividends, provided dividends are earned, for several years at least, but the prospect of a much longer life for the property. The idea is all right provided the terms are fair.

American Business Notes.

Improvement continues to be displayed by the weekly exhibit of averages made by the New York Associated Banks, and their accounts, taken as a whole, seem now to have become so healthy that we should expect to see the detailed exhibit of each bank again making its appearance from week to week. As yet only the aggregates are shown, and these reveal an average increase in loans granted of £1,780,000 for the past week, but the greatest increase is again in specie, the average holding of which has increased by £4,243,200 within the week, and as this is accomplished by an increase of £492,000 in the greenbacks, the reserve has altogether gained £4,735,200. In specie alone these banks now hold £50,048,600. Naturally such an increase as this favourably affects the deposits, which have increased by £7,400,000 on the week, and now amount to £225,434,000, or only £1,680,000 less than the amount of the loans and advances out of which they mostly spring. Thanks to the week's changes there is again an increase amounting to £2,886,000 in the surplus reserve over and above the 25 per cent. of the deposit liabilities as required by law, and the total surplus is, therefore, brought up to £7,413,000 compared with £3,113,000 at the same date last year. Amid circumstances like these it is not surprising that call money should rule at 2 per cent. or less.

Are we, therefore, to infer that all is now at an end so far as banking failures and other troubles are concerned? Not quite. The worst may be over so far as banking credit goes for some time to come, but the after strain of lower prices, diminished trade, reduced consumption of all kinds has now to be borne, and even banking troubles are not quite at an end as the presumably final suspension of the National Bank of North America on Monday last reminds us. It would, however, be unfair to look upon this incident, or on the suspensions of small banks here and there throughout the land, as proof that things are still going down hill, because this particular New York bank ought to have stopped payment squarely and openly long ago. It was a leading bank in the Morse-Heinze chain of banks utilised by Heinze in his copper speculations against the Rockefeller people and by Morse in his efforts to secure a monopoly in the supply of ice and other adventures. As recently as June 22 last it showed a deposit liability of £3,950,000, but when the Heinze smash came followed by that of Morse and his companies, a run set in and by December 3 last the total of the deposits was down to about £1,400,000 with cash in hand at that date amounting to only £76,400. Since then deposits are said to have shrunk to about £500,000. One of the sugar "kings," to use the American phraseology, Mr. T. W. Havemeyer, became president of the bank soon after the old controllers were heaved out, but he was unable to save it, and accordingly the Controller of the Currency was asked to take control. He has appointed a Receiver, and the institution will probably be wound up in spite of Mr. Havemeyer's assertion that it is "still solvent." It has already been twice reorganised, according to Reuter's agent, and for some time back must have been giving unfair preference to insistent creditors. Two other banks in New York had to stop on Thursday—the Mechanics' and Traders' and the New Amsterdam National, the one founded in 1830 and the other in 1887. Both were more or less involved in the Morse mess, and the older of the two, the Mechanics', owed £3,750,000 to depositors as late as August 22 last. Its capital is £400,000 and that of the New Amsterdam Bank £200,000. Of course, both banks are "solvent," and so is the Oriental, which was yesterday the victim of a severe run. Only the directors have refused to give their individual guarantees for the advances required.

Much discussion is going on in the States about currency hoarding. The Western or interior banks are being accused of acting so as to aggravate the panic in the East by drawing away and locking up notes and gold. The statistics published, however, do not seem to lend much support to this contention, although the banks in Manhattan Borough lost £8,340,000 between August 22 and December 3, which was slightly more than the loss of the National Banks in the whole of the rest of the country. But the three cities, in the interior, Chicago, St. Louis, and San Francisco, whose banks are compelled by law to hold 25 per cent. of their liabilities to depositors were pulled upon by the country banks, and had no chance to hoard currency. These country banks, moreover, do not seem to have resorted much to mere credit in any form so as to become possessed of currency. They simply utilised their deposits with the Central banks in order to replace cash in their safes. Under the law these country banks are permitted to work upon a reserve of 15 per cent., but 9 per cent. of this may be consigned to their reserve agents in the Central cities, and they simply utilised this deposit balance to lay hold of currency. But there was comparatively little excessive hoarding in the circumstances, although the aggregate reserve requirements of about £74,600,000 was exceeded by nearly £50,000,000. And the fact remains that with the nett deposit liabilities of the country, as expressed through the National Banks, standing at £497,133,000 on December 3, the money held against these liabilities was only about 10 per cent., which does not seem much of a provision against runs. A more interesting series of facts from our point of view are those relating to the means taken to strengthen the banks during the strain. They were really formidable. Taking August 22 as the starting date, between that and December 3 £10,000,000 additional bank notes were issued, besides nearly £13,000,000 in Clearing-house certificates, excluding always certificates that may have been issued by the State banks, and £16,000,000 in additional Government deposits. In addition to all this, about £15,000,000 in gold was imported from Europe. Altogether, therefore, the banks were strengthened by cash to the amount of £54,622,0000 during the greatest excitement of the panic, and it is no doubt in

great measure because of this varied, prompt, and effective assistance that the acute stage of the credit fever was brought to an end so swiftly. Hence also the congestion of money now visible in New York.

Much delight is expressed in the Protectionist Press of the United States at the wonderful figures of the export and import trade of the republic for December. Two new "records" are said to have been established during that month, and for the first time in the country's history the favourable trade balance—that is to say, the balance favourable for the foreign creditors of the United States—exceeded £20,000,000. Were the excess of exports over imports to continue at this rate for the next six or twelve months everybody on this side of the Atlantic might be reassured as to the capacity of American borrowers to meet their obligations abroad. New York bankers would not even have to send back any gold to Europe for there would be a surplus left on the export account with which to buy more of the metal if they wanted it. The aggregate export of commodities in December last was no less than £41,436,000, which was higher by about £541,000 than the value for the previous month, and £3,356,000 more than the value for December, 1906. Of this large increase compared with a year back bread stuffs contributed nearly £2,400,000 and cotton about £900,000. Concurrently with this opportune expansion in the exports there was a decline in import values which came down to £18,958,000 as against £26,870,000 in December, 1906. In November last the shrinkage in the total brought it down to £22,189,000, but these movements are quite healthy from our point of view. The more imports are restricted and exports hurried out of the country, the quicker will be the economic recovery in the United States. These figures, of course, take no account of the specie movements which for the year have resulted in a nett import of about £16,636,000, which would have to be added to the imports of merchandise, thereby reducing to a corresponding extent the fine display made by a nett export balance of over £100,000,000 in the merchandise account for the year. Even £100,000,000 a year, however, is just now barely enough to meet United States requirements abroad, including the repayment of accommodation bills raised to import gold and of railroad short advances falling due within the year, but the Republic's export trade in raw produce seems likely to continue heavy for some time yet, and as prices are bound to recede, at any rate for cotton, iron, and copper, if not for grain, we may count upon more "records" favourable to the foreign creditor whatever they may be to the economic health of the Republic.

Some idea of the excessive drains of corporations upon credit last year may be formed by studying the particulars of new emissions made during its course, and one striking proof of the unbridled excess displayed in running into debt is afforded by the list of short term note issues now made public. These for the railway companies alone aggregated about £54,000,000 last year, and none of the debts embraced in this total run for more than four years. Many of them are repayable in the current year and the majority in 1910. Amongst the borrowers on this embarrassing kind of security the most conspicuous were the Pennsylvania Railroad, which raised £12,000,000, all of which falls due on March 15, 1910; the New York Central, which follows with £10,000,000 due on February 1, 1910; and the Southern Railway, which owes £3,000,000 due at the same date. The Tidewater Railway and the Interborough Transit Company have raised £2,000,000 each, repayable as to the Tidewater debt on February 15 next year, and as to the Interborough on March 1, 1910. Altogether 34 or 35 railways came to the market for temporary assistance of this kind, and in addition the American Telephone and Telegraph Company raised £5,000,000, repayable on January 1, 1910, and the Westinghouse Electric and Manufacturing Company £1,720,000, which it should have met, but could not, in October last. Altogether £60,000,000 of floating debts were in this fashion created last year between the railways and industrial undertakings.

Alongside these temporary borrowings, all indicative of excessive strain, there was a steady outpour of debts in more permanent form. The total listings of bonds on the New York Stock Exchange to provide new capital came to nearly £50,000,000, and here again a long procession of railroad companies stands out prominently as devourers of capital. There were also heavy issues of shares made by railway companies, the most notable being £7,123,000 of Southern preferred stock and nearly £5,000,000 of Chicago and North-Western common stock, so that in this way about another £30,000,000 of fresh money was raised to satisfy the agonised necessities of enterprises in the Republic. On the New York Stock Exchange alone the new listings of the year reached about £200,000,000, but part of this total was of the new paper for old type.

Is this year of the Presidential election to be a year of financial and other scandals? Really it begins to look like it, for now we have a report on the work at Panama which suggests ugly revelations of the incompetence and carelessness, to speak mildly, displayed in the execution of the works on the canal. As the *New York Press* points out, the whole ditch was estimated originally to cost only £28,000,000, and there was talk of keeping it down to £22,000,000, but Col. Goethals, the new engineer appointed by the Government to take charge of operations, has made a report which reveals the fact that already £16,000,000 have gone, that another £1,600,000 will be required between now and the end of June, when the Government's fiscal year closes, and that by the close of next fiscal year more than £24,000,000 will have been spent, much of it misspent. All this money will have disappeared, and the Government will not have even begun the construction of the massive foundations for the dams, locks, &c., which go to the formation of a working waterway. So another £30,000,000 may be needed before the business in hand can be brought to a satisfactory completion. This will have to be added to the military and pension charges which the Republican administration has been heaping upon the country under President Roosevelt, and indeed, we may say so far as pensions are concerned, since within a few years after the close of the Civil War.

Last year was a comparatively slack one in the building trade of the United States. The statistics relating to this branch of industry, carried on to a large extent by help of mortgages, borrowed money of some kind, have been provided by the *American Contractor* for 55 cities, and these show that although the total building transactions of the year came to over £116,000,000, this was nearly 13 per cent. less than the aggregate for the preceding year, which had been £133,406,000. In the Southern, Central and Western cities the aggregate differed but little in the two years, the combined figures disclosed being less than £2,000,000. In the two extreme divisions, Eastern and Pacific, however, the falling off during last year in building activity was very marked. Greater New York alone furnished £8,500,000 of the decline of £17,400,000 shown by the entire country, and of this shrinkage £7,000,000 fell within the Borough of Manhattan alone. Diminution was also shown in cities like Baltimore, Buffalo, Philadelphia, and Pittsburg, but not to the same extent. On the Pacific coast the nett aggregate diminution in the outlay on building operations was about £3,000,000. It is surprising to note that a decline of £4,300,000 is ascribed to San Francisco alone, where one would have supposed that building operations would have been stimulated to an extraordinary extent by the enormous amount of money obtained from the insurance companies. In Los Angeles the decline was £650,000, but elsewhere, in Tacoma, Spokane, and Seattle there was £2,200,000 more thus sunk than in 1906.

By way of illustration of the kind of "scaling down" work that will have to be done during the

period of readjustment following the crisis, it may be interesting to note how the capital of the American Steel Foundries Company is about to be dealt with. This concern has not been flourishing for a long time; indeed, we do not know that it ever flourished in any substantial manner, but it has a share capital of £7,530,000, of which nearly £4,000,000 was in the form of 6 per cent. cumulative preferred stock, the accumulated unpaid dividends on which amounted on August 1 last to nearly £700,000, or about 20 per cent. of the nominal par value. And it also had a debt in debentures of nearly £700,000. It is now proposed to cut down this share capital to £3,437,000, thus wiping out more than £4,000,000 of it, and in this cutting down the preferred shares will disappear altogether, all arrears of interest being cancelled, and the whole capital will become common stock entitled to such profits as may remain after the working charges have been met together with the charge imposed by a proposed debenture issue of £688,000. It almost looks as if this concern were destined to find its way down the fiery throat of the Carnegie Steel Trust.

A plan of reorganisation has been patched together for the Westinghouse Electric and Manufacturing Company, and one essential condition thereto is an issue of £7,000,000 in 5 per cent. twenty-five-year mortgage bonds. This will be accompanied by £1,400,000 of new stock, and the stockholders are expected to subscribe for part of the new securities. So far as we are concerned, it will give rise to no heart-burning if they subscribe for the whole of them.

It has been found impossible to keep the Chicago and Milwaukee Electric Railroad out of the hands of a receiver; therefore Judge Grosskup, of the United States Court in Chicago, again appointed one in the beginning of the present week. The new receiver is said to be a nominee of interests favourable to the present management, and no doubt efforts will be continued to straighten out the financial tangle into which the company's affairs have fallen. The chief liability is in the shape of bonds amounting to about £3,000,000, and there are floating debts and other liabilities amounting to about another £1,000,000. Mr. Frost, the president of the company, says that the recent brief receivership injured the credit of the concern and made it impossible to conclude the sale of bonds.

Official particulars are now to hand about the profits of the United States Steel Corporation in the final quarter of 1907, and are rather interesting. Necessarily, the Trust is only at the beginning of its troubles, and will have to deal with reduced business all this year unless borrowing of the kind just indicated can be resumed as if nothing had happened. That is hardly possible, and therefore declining earnings must be anticipated. For the last quarter of 1907 the nett profits came to £6,511,000, or fully £2,250,000 less than in the September quarter, and £1,840,000 less than in the December quarter of 1906. For the whole year, however, the profits were the highest ever netted, being no less than £32,197,000 or £871,440 more than in 1906, but the surplus, after paying the full dividend on the preferred stock and giving ½ per cent. on the common stock, being at the rate of 2 per cent. per annum, has diminished by £310,400 as compared with September, and is £3,093,200 less than in December last year. As the orders on hand have also fallen to 4,624,553 tons compared with 6,425,008 tons at the end of September and 8,489,718 at the end of December, 1906, it is permissible to doubt whether the minute dividend upon the common stock will much longer give joy to the recipients thereof; but if Mr. Gary has his way prices will not be allowed to drop, however far consumption may contract.

The New York Central Railroad continues to amuse markets by the varied presentments made by its subsidiaries. This week the Cleveland, Cincinatti, Chicago and St. Louis, familiarly known as the "Big Four" company, cut its dividend by half, bringing it down from 4 per cent. per annum to 2 per cent. by paying 1 per cent. for the past half-year, but the "Nickel Plate," or New York, Chicago and St. Louis Railroad, another arm of the New York Central, simultaneously raised the distribution on its second preferred stock by 1 per cent. to 5 per cent., thus puzzling the market. A reduced "Big Four" dividend would imply an intention to reduce the New York Central's own rate of distribution, but the "Nickel Plate" increase might go some little way to help in preventing that help from being given to bears, so what can players do but scratch their heads, hedge, and watch? It is noticeable that just before the C.C.C. and St. Louis announcement was made the company's stock had been quoted $2 up, and directly the news became public it fell $10. That also is part of the day's amusement. Neither the "Big Four" nor the "Nickel Plate" reports appear to indicate any great necessity for changing the previous dividends, for the one shows an increase of £22,200 in the nett earnings and the other an increase of £77,000, but there are many things besides nett earnings to be taken into account in determining what stockholders are going to receive.

New capital issues are being made as fast as circumstances will permit, if not faster. Greater New York is said to be going to make a very large omission of 4½ per cent. bonds on February 10, and meanwhile the St. Louis and San Francisco road has sold £600,000 of 6 per cent. notes, and the Delaware and Hudson Company has succeeded in placing a loan of £1,200,000 due five months hence. An early issue of refunding bonds is also contemplated by the Missouri Pacific Company to the amount of £8,700,000. The urgency is not obvious, for the company does not seem to have much debt falling due this year. The Hudson Tunnel concerns are also wanting £3,000,000 on 6 per cent. two-year notes offered at par, less 1½ per cent. commission.

We have never yet received any official account of the yield of last year's harvest in Canada. There has been a dead silence both as to the quality and bulk of the crops there, and while we are asked to admire, and do admire, the solidity displayed by Canadian banks during the crisis in the United States, there has always been a doubt whether the business was as sound as it looked. The prosperity of Canada does not depend upon its hectic industries reared within the forcing house created by the tariff, but upon its raw produce, and the Western States and Territories in particular are almost entirely dependent upon the crops. What, then, are the facts about these crops? There is no means of getting to know just yet, but the Ottawa correspondent of the *Times*, telegraphing on January 26, let a little light in when he informed the public that arrangements were almost completed for an advance of about £750,000 to be made to settlers in certain portions of Saskatchewan and Alberta to enable them to purchase seed grain. The money is to be advanced for three years, and the rate of interest charged will not exceed 3½ per cent., which is surely very cheap lending indeed, considering that probably twice that rate is the very minimum charged by the mortgage and land jobbing companies from, or through, whom settlers have acquired their farms. The area affected is said not to exceed 500,000 acres, and the Dominion Government is to make the loan to the provinces up to the amount required, taking as security Provincial bonds. These Provincial Governments will superintend the distribution, and no doubt will see that none of the money goes into wrong hands. But is not this a singular commentary upon the extraordinary stream of optimistic messages from that part of the Dominion with which we have been treated, not only before but ever since it became known privately that the crop was a bad one?

Passing Events.

In the Money article of Wednesday's *Times* particulars, vouched for as accurate and the fullest obtainable, are given regarding the recent shipments of gold to the United States. Altogether about £20,330,000 is accounted for, and though, as the editor remarks,

a few million dollars more may have slipped through unobserved in small parcels, this total is higher than any hitherto mentioned. The largest importers were Lazard Frères, who took away £5,043,000. Following them came Heidelbach, Ickelheimer and Co., with £3,275,000, and the National City Bank of New York stands third, but a long way behind, with £1,700,000. Kuhn, Loeb and Co. took £1,050,000, the Guaranty Trust Company of New York £700,000, the Bank of Montreal £500,000, the Illinois Trust Company of Chicago £1,000,000, the First National Bank of Chicago £600,000, and the Bank of Nova Scotia £1,200,000. Most of the other items are considerably smaller, the largest amongst them being £400,000 imported by the Chase National Bank of New York. Shall we ever see that gold any more, or want to see it?

A verdict in its favour with £5,000 damages was about the smallest reparation due to Parr's Bank for the libel perpetrated upon it by *Vanity Fair* at the instance of Mr. W. B. Horsfall. We know that unhappy gentleman, who was dealt with most leniently by Mr. Justice Grantham in his summing up, and, knowing him, marvel how any journalist could have been persuaded that his wild accusations against the bank were in the remotest degree well founded. Obviously the man had become unhinged in mind at least on this one particular point, and in consequence he laid upon the bank violent blame for misfortunes arising from causes with which it had nothing whatever to do. That was the conclusion we were driven to after an examination of the papers submitted by Mr. Horsfall—and we believe he went round all the newspapers with the same story and the same documents until at last he found one editor imprudent and ignorant enough to be persuaded to give publicity to his groundless charges. In reality the case was a simple one enough, and the bank dealt forbearingly with a customer who had fallen into a difficult position, giving him time and a chance to retrieve himself. When he proved unable to do so the bank, as in duty bound, protected itself. It was, therefore, outrageous to publish such statements as those quoted in the Court of King's Bench this week, and it is a marvel how any journalist claiming to be reasonably instructed and endowed with the germs of a sense of responsibility could have allowed himself to be led on to do such a thing.

News about the hunger in India is still unsatisfactory, and a slight increase took place in the total numbers in receipt of State-relief last week. It is now 395,458, and the Viceroy's telegram is not particularly reassuring. Prices, he says, have fallen slightly in part of Northern Central India, but are still "very high everywhere," and the recent rain "has not on the whole had any very marked effect." Burma, however, is expected to yield a full crop of rice, and prospects are not hopeless at any point, although in the United Provinces no less than 186,331 people are on relief works, besides 124,892 who are in receipt of gratuitous relief. That part of India is the most afflicted of all, but in Central India 65,566 persons are on the works and 4,185 in receipt of gratuitous relief. Spring crops are said to be in good condition generally in the Central Provinces, where relief works have not yet been opened, although 1,327 weavers and 841 persons of unspecified occupation are being gratuitously helped. In some districts of the Punjab, the United Provinces and Madras rain was fairly heavy last week, and the prospects of the spring harvest continue fair.

From the interesting report of Mr. Vice-Consul Griffith on the trade of the island of Cuba for 1906, which makes a rather belated appearance, we gather that the prosperity of the island is not so conspicuous as was hoped. The cause of its backwardness is also made tolerably plain, for the United States is evidently treating it as the private property of its monopolists. The total trade out and in, coin and bullion included, was less in 1906 than in 1905, imports having fallen from £20,644,197 to £19,907,932, and exports from £22,450,000 to £21,782,000. This is no doubt an incidental setback, but when we find that of the imports for 1906 no less than £9,522,000 came from the United States, and that the same country took £18,538,486 of the total exports, we can understand how it is that Cuban progress should be stifled, or at best regulated to suit the interests of the American trusts. What is the use of talking about letting Cuba govern itself, of giving it a special tariff by which something like equality among trading nations would be assured, when such is the actual outcome of the United States conquest?

The Russian bureaucracy is not going to be behindhand in racing down the road to ruin, and is cajoling or forcing the present feeble Duma to accept a naval programme involving the expenditure of £225,000,000, to be spread over a period of twelve years, in order to re-create a navy for which the country has no use, and to man which it has no sailors. This outlay is at the rate of some £19,000,000 per annum, the whole of which will have to be borrowed. The prospect is thus good for foreign, probably for the most part British, shipbuilders, and perhaps for the moneylenders of Western Europe. What it is for the Russian Government and people we need not now pause to inquire.

A correspondent who has a deep interest in Chile informs us that the witness referred to last week accused of perjury in connection with the insurance claims has been sentenced by the Chilian courts to 18 months' imprisonment. That is a useful and necessary correction, but insurance shareholders and business people here will be more interested in learning that the feeling in Valparaiso is very bitter against those companies that have left for their defence agents capable of stooping to employ three such witnesses, all now in prison for perjury. In spite, however, of the singular zeal of these agents the Chilian Law Courts gave a decision on the 8th ult., to the effect that a fire which destroyed Messrs. Lange and Company's store and which did not break out until twelve hours after the earthquake, was not the result of that calamity, and that the companies are therefore liable to pay for the damage done. Instead of paying the companies have appealed. The amount involved is £45,000, and this is the first case of any importance decided against the insurance companies. Would they not do better to compromise than to go on in this fashion stirring up an enmity which must react not only upon their future business in Chile, but upon European enterprise of all kinds within the borders of that Republic?

A friendly American correspondent now in Mexico City sends us some jottings as to what he has seen there. Apparently Mexico has its ugly financial scandals as well as the United States, but these would have little or no interest here. It is valuable, however, to note that Harriman is said to "absolutely own" the Mexican Central Railroad, that is to say, he controls it through his finance operations. Whether that road is profitable or otherwise we could not venture to say, but expenses run to about 72 per cent. of the gross receipts, and so far the crisis has not affected the earnings because the traffic is mostly local. Amongst the Gould roads, that from St. Louis to Laredo needs ballasting and new rails all the way. On the other hand, the National Railroad from Laredo to Mexico City has its tracks and road-bed "in splendid condition." In Mexico City, our correspondent adds, the advancement has been great since he was there two years before. The people look better fed and have more clothes and shoes. Prices of real estate, however, are very high, and on the Stock Exchange the same conditions appear to prevail as in other countries which pride themselves on being more in the van, for you can buy anything but may find it impossible to sell. No wonder when money was costing as much as 12 per cent. per month.

It was fully to be expected that opposition would be offered to the fusion of the Great Northern and Great Central Railways; therefore, the news that the Board of Trade will oppose the ratification of the agreement on various grounds surprises nobody. It was only possible to frame the agreement under the Act of 1858,

some of the provisions of which appear to have been rather worked round than adhered to in drawing up the compact, and the Board of Trade is to oppose principally because the compact provides for the unification of the maximum rates of the two companies, a step declared to be illegal. It is also against a lease of 999 years as a length of term contrary to the public good. The whole matter is aptly summed up by Sir Francis Channing, M.P., who observed that "such agreements implicitly violated the law dealing with amalgamation." The Board of Trade will be backed up by the Associated Chambers of Agriculture, and good will come of its action whether the compact in a modified form is ultimately allowed to go through or not. It is significant of the Stock Exchange view of this transaction that when the news became public about the Board of Trade's move, Great Northern deferred jumped up in price. The feeling, indeed, in the City is that the Great Northern Company has taken a bankrupt concern on its shoulders to its own hurt.

There is no help for it, we must again apologise to Lloyds Bank, being responsible for all blunders in the paper no matter by whom committed. We certainly thought that the corrected figures setting forth the price at which the bank takes its Consols into the balance-sheet were ensured last week when the proof of the note then inserted passed from our hands, but the figures came out next day worse than ever, for we are made to say that Lloyds Bank holds its Consols at 98 instead of 95, whereas what the proof said was at 85 instead of 95, thus correcting the original blunder. We hope the printers will manage to put the figures in correctly this time else there will be trouble, and we are really disgusted to have to refer to a mistake of this kind once again. With a weak institution the thing might have been serious.

A preliminary committee containing a number of responsible and fairly representative names has been formed to give body to an embryo Railway Shareholders' Association, and has issued a circular inviting support. Any holder of British Railway stocks may become a member of this association by remitting 5s. to the secretary, 20, Copthall Avenue, E.C. These subscriptions will be used merely for organising expenses, printing, circularising shareholders, &c. No salaries of any kind are being paid. There is undoubtedly room for a body of this kind, and it ought to get plenty of support, its objects being to bring railway shareholders into closer touch with each other; to furnish a direct and permanent channel of communication between shareholders and their respective boards of directors; to strengthen the hands of directors in emergencies and to stimulate their efforts to check undue competition and to promote economy, as also to supply shareholders with expert information and advice. We wish the project all success.

Difficulty seems to be experienced in arranging the affairs of the Argentine North-Eastern Railway Company. A Bill is now before Parliament which, amongst other things, is designed to carry out the arrangements accepted at a meeting of the proprietors held on January 16. Under the Bill it was proposed to provide £70,000 in the new consolidated stock to the holders of the ordinary shares of the company heretofore issued. This represents 20 per cent. of the nominal amount of such shares, or 2½ per cent. of the proposed new consolidated capital, and the board thinks the offer a reasonable one. It seems, however, that the holders of the ordinary shares are not satisfied, and have refused their support to the Bill unless they can be given £122,500 of the proposed new capital instead of the £70,000 named in the Bill. A meeting therefore has now been called for Wednesday next with a view to decide this point, and the board asks for proxies. It is, as the circular of the directors justly observes, for the proprietors to decide whether or not this concession shall be made with a view to secure the passing of the Bill. Should the demand of the ordinary shareholders be refused it seems probable enough that the Bill in its present shape will have to be abandoned.

At last we have news of Mr. Marconi and his Wireless Telegraph Company. Not only has that gentleman himself returned to Europe, but he has brought with him and has reproduced for the delectation of Marconi shareholders a page of wireless messages transmitted to the *New York Times* newspaper from Europe by the company's method. The effort looks a quite creditable one in type, and a most encouraging testimonial of the efficiency of the service has been bestowed upon the company by the said newspaper on four several occasions quoted, the latest being on December 21 last. The editor feels again and again constrained to invite his readers to behold how excellent the service is, how fully and nicely we are told about King Alfonso's dancing at Welbeck, what France feels after the crisis, the wonders of a London fog, and how factions rage in the Vatican, with lots more. Encouraged by this success, of which we have seen remarkably little on our side of the Atlantic, the directors have set Messrs. Cooper Brothers to audit the books, and the accounts long overdue will be brought up to September 30 last. It is hoped that the work will be finished by the middle of this month, and as soon after that date as possible the shareholders will be called together, say early in March. Meanwhile the Press service, so efficient, according to the *New York Times*, is now to be supplemented by stations opened for ordinary commercial messages, whatever that may imply. We have never yet had from New York a list of Wall Street closing prices through this agency, but it is coming now.

We are glad to see that those people who have been victimised by the Brazilian Government in the matter of the Porto Alegre and New Hamburg Railway are not going to submit tamely to their loss. An agent of theirs has been sent out to Rio de Janeiro, and report says that he will be vigorously backed up there by the British Minister. There is consequently a prospect that better terms will be conceded, and that the property will not pass into the hands of the provincial Government for half its value, as the arrangement compulsorily imposed upon the company by the Brazilian Government would have made certain.

To many people it will not come as a surprise that the board of the British Electric Traction Company has decided to postpone the payment of the dividend due in the middle of this month on the cumulative preference shares. Quite frankly the circular issued by the directors states that a majority of the directors wanted to pay the dividend, but the two who joined the board last year are of opinion, having regard particularly to the present depreciation of some of the company's investments, that the money should not now be paid away. So it has been agreed to postpone the settlement of this point until the annual meeting is held, which will be as soon as the accounts for the year ended March 31 next can be presented. Meanwhile an estimate of profits shows a nett income of £205,000, including about £42,000, being the balance of the Bombay profits, and after deducting £24,000 for general expenses, £12,000 for sundry losses and provisions, together with interest on the first and second debenture stocks and the interim preference dividend paid some time ago, £71,362 remains, exclusive of £13,115 brought forward, so that as the half-year's dividend on the preference shares comes to only £48,431, there appear to be ample funds in hand leaving out of account depreciation.

Nothing very exhilarating is to be found in the annual report of the Corporation of Foreign Bondholders, but neither is it particularly depressing, circumstances allowed for. No further debt compositions have been entered into, but some of the Central American defaulting or discredited States, with whose concerns the Corporation is chiefly occupied, are behaving rather better, notably Colombia and Nicaragua, while even far away down south the unhappy republic of Paraguay is now meeting the pared-down charges of its useless external debt. Ecuador, however, has not been doing its part with reference to the Guayaquil

and Quito Railway, and Guatemala and Honduras are still amongst the defaulters. San Domingo, too, is very far from displaying perfect behaviour, and the efforts to settle the debt of Costa Rica with the help of Messrs. Speyer and Co. have ended in failure. Guatemala has been a defaulter for eight years and Honduras for thirty-six, and there does not seem any immediate prospect of an improvement in their attitude towards the foreign creditor, but it is well to live in hope.

Rumours are afloat on the Paris Bourse that Sir Julius Wernher's six million Kaffir trust, the Central Mining and Investment, is to be reconstructed in some way. A partial dissolution of the concern is hinted at, but the view generally accepted is that simple reorganisation will take place, involving the regulation wiping out of capital. When the last accounts were issued rather less than one-third of the six millions had been lost, and probably no one knows better than Sir Julius Wernher that the recovery of all this money is a sheer impossibility. The recent desperate effort to move Kaffir prices saw Central Minings up to 12 for the £20 per share, and if this valuation is correct no less than three-fifths of the capital is represented by nothing better than shattered hopes.

The Week in Mines.

The Carry Over.

Settlement details engaged the attention of dealers in the Mining sections during the early days of the week, and the course of prices since the previous adjustment was not of the kind to put operators on very good terms with themselves. Carry over rates were not so onerous, thanks to the reduction of 2 per cent. in the Bank rate within the fortnight, but making-up prices were mostly against the Bulls, although the declines were not distressing, bearing in mind the wonderful achievements during the opening weeks of the year. The general rate on South African Gold, Land and Finance shares was 6½-7½ per cent., Rand Mines being done ½ per cent. cheaper together with Johnnies, Modders, Randfonteins and Gold Fields. East Rands appeared to be in short supply, and were taken in as low as 2-3 per cent. In the Diamond De Beers were continued at 3½-4½ per cent. and New Vaals and Jagers at 1 per cent. more, while on Premiers the rate opened at 3-4 per cent. and subsequently rose to about 6 per cent. On Rhodesians the general rate was 6-8 per cent., Tanganyikas being carried over at 4½-5½ per cent. and Chartered at ¼d.-½d. West Africans and Siberians could be borrowed on at 6-7 per cent., West Australians were arranged at 5-7 per cent. and the Australian Copper shares at the same figure. On Anaconda the rate was only 3-5 per cent. and on Rio Tintos 2½-3½ per cent. Most of the Broken Hills were continued at 5-7 per cent., but Proprietarys were only even to 3 per cent. American shares were carried over at 6-8 per cent. The making-up list showed some recovery in the Diamond group, Jagers preference and deferred being ½ and ⅝ better and De Beers preference and deferred ⅜ and ¼ higher, but Premiers were a trifle easier. One or two gold shares also moved the right way, Driefontein Deep rising $\frac{3}{16}$ and Eldorados 5-32. On the other hand, Central Mining fell ⅜, Modders, Gold Trusts and Rand Mines $\frac{5}{16}$, East Rands 11-32, Gold Fields 9-32 and Griqualand West and South African Options each ¼. In the West African section, Bibianis were 3s. 6d. lower and Taquahs dropped 5-32, while among West Australians Kalgurlis showed a gain of $\frac{3}{16}$, allowing for the deduction of the 7s. 6d. dividend. One or two Broken Hills were a shade harder, and the Copper list revealed a good many improvements. Great Cobars were up 1¼, Utahs ½, Famatinas 11-32 and Bostons $\frac{5}{16}$; on the other hand, Whim Wells lost ½, Spasskys $\frac{5}{16}$ and Tintos ¼. Tins were lower here and there, and among other things Alaska Treadwell receded ½, Someras were ¼ up, Mexico El Oros rose $\frac{5}{16}$ and Siberian Proprietary ⅜. Ooregums made up 2s. lower.

Kaffir Shares.

When the contango business was done with dealers in the Kaffir Circus found time hang heavily upon their hands. Bank rates were falling all over the world, easy money was said to be assured for an indefinite period, and other sections of the House were blazing good, but never a stroke of business came to the Kaffir Circus. The Randfontein and Premier incidents, the amalgamation schemes, actual and projected, and all the other unpleasantness with which the market is surrounded seem to have scared every decent person away, and if the wild optimism of the House generally had not caused a few Bears to hurry in dealings would have been at a complete standstill. The Shorts were no doubt wise not to remain too heavily committed, as there is always the possibility that some of the bolder spirits, encouraged by the rollicking time being enjoyed in other sections and perhaps having "made a bit," would endeavour to give Kaffirs a run. Prices, therefore, remained quite firm, despite the absence of general business and towards the middle of the week punters began to take heart, popping quotations up a little when nobody was looking. Paris and Berlin sent a few inquiries, and sundry provincial clients mentioned Kaffirs casually in their letters to brokers. These things kept the Bears on the fidget, and with the assistance of a little quiet manipulation by the supporting groups prices were made to close at a modest advance. The deeps were favoured to some extent, and the improvement, though small, was not entirely confined to the leading counters, but was pretty well spread. Knight Central, though, was marked back a fraction on the fusion with the South Knights.

Land, Finance, and Diamond.

In the Land and Finance division Central Minings were carried up at a nice pace, and among other things attention was given to Johnnies, Welgedachts, Goerz shares, T.C.L., Gold Trusts, Geduld, and Gold Mines Investment. The better tendency also spread to Rhodesians, and the Banket things enjoyed a rise, especially Eldorados. Tanganyikas were hard to move, and poor old Chartered were only 15s. sellers. The Diamond share market has lacked sensation, and because of this leading issues picked up a fraction. Paris supported De Beers, Premiers, and Jagers in a small way, and there were hints of just a faint improvement in the diamond trade.

West African and Australasian.

West Africans were almost unnoticed and showed a dull tendency, but, as we hinted might happen, Bears of Broken Hills found they had carried the game too far, and when sundry rumours of a favourable kind got about and lead jumped up there was a tremendous rush to cover. It was said that the Broken Hill Proprietary Company had secured contracts for smelting the production of the other Barrier companies during the current year, and that the shares might be split. The latter was not generally believed, but quotations went rapidly ahead and left off at a good advance. Ivanhoes were a pretty good market in the West Australian section, and Northern Blocks, Lake Views, Kalgurlis, and Sons of Gwalia enjoyed small rises. New Zealands were mostly better.

Copper, Tin, and Miscellaneous.

Copper shares showed a fair number of improvements, but Rio Tintos were affected by the reports in circulation that the severe subsidences which recently occurred in the mine had caused damage to the extent of £200,000 or £300,000. Copper was moderately firm, and better-looking advices from America helped things like Amalgamated and Anacondas. Bostons improved on the meeting, and Great Cobars and Mount Elliotts found favour, the latter on good development news, but Lyells were also harder, and some of the small-priced shares added pence. Tin shares were mostly dull, Dolcoaths falling on the dividend. Several American gold shares and Indians were firm, apart from Balaghats. Cherokees improved 1s. on the denial of the reconstruction rumours. Pekins continue dull.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No one et shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Jumpers Deep.—The past year marked the re-entry of this company into the dividend list, a modest beginning being made with two payments of 5 per cent. each. During the twelve months to September 30 229,206 tons were treated, which yielded 55,003 ozs. or 4.805 fine dwts. per ton, and 229,643 tons of sands and slimes gave 24,034 ozs. or 2.093 fine dwts. to the ton. Total recovery was therefore 79,037 ozs., being 6.905 dwts. per ton, and the revenue from gold won was £331,803. This is at the rate of £1 8s. 11.857d. per ton milled, and the working costs of £280,952 came out at £1 4s. 6.545d. per ton, leaving a profit of only 4s. 5.312d. There was a decrease in the revenue from gold of 10.736d. per ton, but the working costs were down 2s. 8.850d. per ton, a good saving, but clearly very much needed, and still further reductions must be effected if a fair margin of profit is to be shown. The tube mills appear to have done good work, and are largely responsible for the improved position. Balance of profit is £50,851 and £2,455 came in from other sources, making £53,306, and as the important sum of £69,766 was brought forward, there is no less than £123,072 to be disposed of. Capital expenditure was £3,613 and Transvaal Government taxes took £5,105, so that in order to pay the dividends mentioned, which required £52,389, it was necessary to reduce the carry forward by about £7,800 to £61,964. Tonnage of ore developed during the year was 371,955, or almost 100,000 tons in excess of the quantity mined, and the reserves are now estimated at 458,045 tons of 6.1 dwt. ore. Compared with the end of the previous year, there is an increase in the reserves of 192,217 tons, but a decrease in value of 1.7 dwts., due largely to the fact that the reduction in working costs admits of a lower grade of ore being profitably mined.

South Nourse.—The position disclosed by this company's report for the year ended September 30 is anything but encouraging The development carried out in the twelve months showed a small improvement in the general character of the reefs, but the average grade of ore disclosed was not of a satisfactory nature. The mine, however, is still in the first stages of development, and as the work thus far has been confined to localities considerably affected by abnormal geological conditions the results disclosed should not, perhaps, be taken as indicative of the true character of the reefs. But as to that the future alone can decide. According to the manager's report, operations at No. 1 shaft were carried on until December 31, 1906, when further work was suspended in accordance with the policy laid down. Since the stoppage at this shaft the water has been allowed to accumulate, and at the end of October was within a few feet of the shaft collar. At No. 2 shaft work was continued throughout the year without interruption, but later in the manager's report it is stated that much trouble was experienced in sinking No. 2 shaft incline, owing to the heavy seepage of water following the incline and also to the abnormal condition of the hanging wall which necessitated considerable close timbering between the second and third levels. At September 30 last there were developed 173,914 tons of ore, having an average value of 4.2 dwts., but of this 59,924 tons, or only about one third, had an average that could be regarded as payable—namely, 5.6 dwts.—and as far back as April last the company's working capital was becoming exhausted. So some of the largest shareholders were approached and agreed to lend £40,000 at 6 per cent. in consideration of an option for two years from June 1, 1907, upon 40,000 of the reserve shares at par. With the aid of this money vigorous development was continued, the third level being opened, and when the deeper parts of the mine were reached and more normal conditions prevailed as the distance from the disturbing dykes was increased values improved. In the circumstances the directors would have had no hesitation in pushing on development, but financial considerations again came to the front, and as the large shareholders who put up the original working capital at £3 per share were unwilling to make further advances it was decided to shut down at the end of December last. It was necessary to do this in order to avoid the danger of a non-producing mine burdening itself with a debt of any very serious nature. Expenditure during the year was £50,119, and the balance in hand at the close was £47,981, of which £18,018 was in cash and £29,963 represented by stores and material, etc. By December 31 the cash balance was £5,000, and clearly work could not proceed.

Turf Mines.—During the year ended on September 30 last work was confined to shaft sinking and the necessary surface equipment for this purpose. The shaft was deepened 1,103 ft., and had attained a depth of 1,285 ft. by the close of the financial year. A hard dyke was encountered at a depth of 640 ft., and delayed progress for a distance of 355 ft., but on emerging from this, much quicker and cheaper work was done. It seems probable that the South Reef will be encountered in the shaft at a depth of, approximately, 3,580 ft. instead of 3,700, as previously announced. Borehole results also indicate that the shaft, which had by December 20 reached a depth of 1,680 ft., should pass through fairly regular formation for the whole of the remaining distance. There is also no reason to fear any serious inflow of water, and it is hoped to strike the South Reef in the early months of 1909, a much earlier date than appeared likely a short while ago. A year back it was announced that the two incline shafts of the Village Deep were being continued towards the company's northern boundary, and it is probable that both these shafts will reach it towards the end of next year. It will then be possible to push ahead development on the Turf Mines very rapidly. Recent developments in the Village Deep Mine have shown considerable improvement, a fact that has a bearing on the prospects of the Turf Mines property, which on the dip of the reef is only 1,400 ft. from the lowest Village Deep workings. Expenditure on development and equipment during the period under review was £104,513, and the company, which is capitalised at the enormous sum of £1,787,480, still has large cash resources. Cash balances at the date of the accounts were £98,833 and £529,200, equal to 18s. per share, remained to be called on 588,000 working capital shares.

Ferreira Deep.—Another considerable increase occurred in the tonnage treated during the year ended September 30 last, thanks largely to the ample native labour force available and the two tube mills installed during the previous year. Total quantity crushed was 270,240 tons, yielding 115,306 ozs. of fine gold, while 271,690 tons of sands and slimes gave 42,746 ozs., making a total of 158,052 ozs. or 11.697 fine dwts. per ton, a decrease of 0.448 dwts. compared with the previous twelve months. Revenue from gold won was £663,437 or £2 9s. 1.198d. per ton, a decline of 2s. 0.039d., and the total working costs came to £260,885, being 19s. 3.691d. per ton, a drop in this case of 1s. 4.776d. per ton. Working profit therefore came to £402,553 or £1 9s. 9.507d. per ton, which, though slightly less as regards the latter compared with 1905-6, must still be considered a satisfactory figure. Interest and other revenue brought up the total profit to £405,707, and the directors provide capital expenditure to the amount of £45,430 from this total besides a trifling amount for shares taken up and £41,777 for Transvaal gold taxes. The remaining £318,500 is distributed in the shape of two dividends of 17½ per cent. each, making 35 per cent. for the year. The total sum now disbursed in dividends is £1,228,500 or 135 per cent. on the capital of £910,000. In March last the board decided to proceed with the extension of the company's reduction plant to 160 stamps and four tube mills by the addition of 40 stamps and two tube mills together with further cyanide and slimes plant at an estimated cost of approximately £117,500. These additions, which, it is satisfactory to note, will be paid for out of profits without interfering with the normal rate of dividends, are now well in hand, and the new stamps will probably be in readiness for operation early this month, when bigger profits will probably ensue. Ore development during the year amounted to 423,309 tons, of an average assay value of 8.8 dwts., and the reserves at the end of the year were calculated at 1,406,348 tons worth 9.9 dwts. per ton. The tonnage shows an increase of 2,119, and the value is 0.4 dwts. lower, but the general manager reports the company's prospects as very bright, and considers the outlook in every respect a promising one.

South African Gold Trust.—Although the shareholders of this well-known undertaking are to get a 10 per cent. dividend after two completely barren years, the statement in which this information is set forth will hardly inspire them with feelings of joy. In some way or other the company managed to gather a profit of £92,877 during the past twelve months, and after meeting the preference dividend there was £136,992 to play with, including the balance brought forward. This looks all right, but there was the trifling sum of £326,195 to be provided for depreciation on investments and doubtful loans, and to meet it the directors take £250,000 from the reserve fund, £35,544 from premium account, and £40,651 from profits. This withdrawal reduces the reserve to £250,000, and the premium account vanishes altogether. Is it resolved that in the past three quarters alone the depreciation on the company's holdings and loans has exceeded £900,000? The premium account, which has now disappeared, originally stood at £400,000, every penny of which came from the pockets of shareholders. The dividend now proposed requires £50,000, leaving, according to the directors' statement, a sum of £86,992 to be carried forward; but whether this includes the sum allocated from profits to depreciation, or whether the money was deducted before the revenue was struck, is anything but clear.

Henderson's Transvaal Estates.—The meeting of this undertaking, held on Friday of last week to consider the board's proposal for the reconstruction of the company, proved, as expected, a pretty exciting affair. The chairman's speech was not a very enlightening statement, and was mainly devoted to an explanation of the reasons which had led to the placing of the company's resources in the Tweefontein Colliery, and the failure of the attempted debenture issue. No very substantial reasons were advanced in support of the reconstruction and assessment, and Mr. Henderson appeared in person to move a resolution for the appointment of a committee of inquiry. The names submitted—Mr. W. B. Peat, president of the Institute of Chartered Accountants; Mr. Robert Inglis, chairman of the London Stock Exchange; Mr. Edward Nuttall and Mr. R. J. Nicholas, the last two being large shareholders—ought to ensure impartiality, but a large section of the shareholders was clearly dissatisfied. Two amendments were proposed, one providing for a committee of seven instead of four, and the other for the appointment of at least a dozen investigators, shareholders to be given time to consider their names. Both these amendments were supported by an overwhelming majority at the meeting, but Mr. Henderson and his friends were well supplied with proxies, and had no difficulty in carrying their own resolution. The committee will

report to the shareholders next Friday, and it will be more than interesting to see what happens. The board's ready acquiescence in the appointment of Mr. Henderson's committee is decidedly significant.

STRAITS AND GENERAL DEVELOPMENT.—This company presents a report for a period of fifteen months made up to December 31, 1907, and the directors commence by lamenting that no information is forthcoming as to the Consolidated South Rand Mines Deep, in which it holds 59,150 shares. The accounts are two years overdue, and the "directors had hoped to be in a position to give you information as to the conduct of this venture, together with the assurance that the large sum of money handed over to the new directorate has been kept intact. They have no reason to suppose that this is not the case." No work has been done on the Vlakfontein property during the year, but on Daggafontein, in which the company's holding has been slightly increased, it is expected that the main reef will very shortly be reached in borehole No. 7, completing the exploration of this property. The holding in Henderson's Transvaal has actually been increased to the original amount, the directors having taken advantage of the "absurdly low value ruling for these shares," and they announce their intention of joining the reconstruction, although where the money to pay the assessment is to come from is beyond the wit of man to say. The directors have given up half their fees for a year, and the manager has returned £100, which is something gained. Reserve for the 15 months was £1,358, and the outgo just £6 less, and this sum is deducted from the existing debit, reducing it to £1,589. The investments have a book value of £68,743, and the company has £5,002 out on loan, including interest, but has had to borrow the money.

TRANSVAAL AND DELAGOA BAY INVESTMENT.—This company did not do so well in the twelve months to August 31 as in the preceding period, doubtless due to the unsettled condition of the coal trade. But the Coalowners' Association, to which we have referred in dealing with the reports of other enterprises, is expected to have a beneficial influence in future, and results henceforth may be more satisfactory. Output of coal for the year was 349,693 tons and the quantity developed in the mine is 5,730,580 tons, giving 3,438,348 tons of clear coal available for market as compared with 2,858,973 tons at the end of August 31, 1906. The Transvaal and Delagoa Bay Collieries, which operates the mine, is entirely owned by the Investment Company, and this, with the company's other properties, has a balance-sheet value of £104,071. Equipment of the collieries, together with a railway line, &c., has cost £132,033, after making fair depreciation allowance; trading accounts are a long way in favour, and the cash balance is £25,426. Total revenue from all sources is given in one item at £35,380, a decline of £8,568, and the nett credit is £20,167 compared with £28,632. Balance brought forward is the big one of £68,411, increasing the available sum to £88,578, but the directors drop the dividend by 5 per cent. to 10 and carry forward the increased sum of £70,078.

ANTENIOR (MATABELE) GOLD MINES.—The moderate improvement revealed in the report of this undertaking issued a year ago was not maintained in the twelve months to June 30 last, and the company seems now in a sorry plight. Operations were again on a very small scale, only 12,210 tons being treated, but the worst feature was the extraordinary fall in the value of the ore. This averaged only 5.79 dwts. per ton milled and 2.5 dwts. per ton cyanided, as against 12.12 dwts. and 3.762 dwts. respectively in the preceding period. Working costs were reduced to some extent, the expenditure per ton milled being £1 2s. 4.7d. as compared with £1 4s. 6.3d. and 4s. 6.3d. per ton cyanided against 6s. 3d., representing a saving on the tonnage treated of £1,947. Interest, dividends and transfer fees produced £1,187 against £362, and general expenses in London and South Africa were reduced by £149, but nevertheless the operations resulted in a loss. Revenue under all heads was £18,642, and the outgo £24,430, meaning a deficiency of £5,788, which goes against a profit of £10,894 and reduces the credit to profit and loss account from £6,333 to £545. On the regular working of the mine there was a balance on the right side of £3,412, but against this had to be set sundry mine expenses £2,062, development redemption £3,663, and depreciation on plant, &c., £1,705. The managing director tries to make something of the fact that £1 6s. per ton charged against the same as redemption is a very high figure, and tells us that if excluded the year's receipts would show a small profit instead of a loss, but this is not the only company that might do well by failing to provide for all proper liabilities. The fallacy of the reasoning is emphasised by the position of the development account in relation to the ore reserves. The latter are estimated at the startling amount of 4,903 tons of 7.1 dwt. ore, and the balance-sheet shows a development account of £37,800. Unless a profit can be made on working this development expenditure is not worth a brass farthing. Prospects of improvement, unfortunately, seem of the poorest, and there is no guarantee that the reserves are worth the mentioned value, as the mine has been without an assayer for eight months, and consequently no stope assays are available. The best the managing director can say is that while the mine is at present working in a poor zone there is no reason for believing that it is finished, as on several previous occasions the same difficulties have occurred.

EMMA COMPANY, 1900 (in liquidation).—The notorious career of the Emma mine can never be completely forgotten, but in a little while the actual existence of the ill-fated venture will probably come to an end. The concern is in liquidation now, and the report just issued states that since the last statement, dated November 10, 1906, the [illegible] for the sale of the Emma [illegible] wood, Canon, Utah, U.S.A., for the [illegible] ing the agents' commission and [illegible] instalments, together amounting to £[illegible] September 20 last, have already been [illegible] were confident that the final instalment would be [illegible] as it became due, and so enable them to [illegible] this month; but the financial condition in the United States has compelled the purchaser to ask for an extension of time for complete payment of the final instalment. In the circumstances the directors have agreed to this request, although it delays the closing of the liquidation.

CHEROKEE GOLD FIELDS.—Rumours have been current about that this concern would have to go through the [illegible] process, but the secretary circulates an extract from the report of the manager, writing under date of January 6, which means, if it means anything, that the stories have no foundation. In this extract it is stated that all work is proceeding satisfactorily, and the erection of the mill should be completed by the end of February. "The available funds of the company are ample to meet the estimated amount required to put the company on a paying basis." The concern is a Mexican affair, and has been reconstructed once already.

Critical Index to New Investments.

LIVERPOOL CORPORATION BILLS.

Tenders will be received at the Bank of England on February 6 for £500,000 Corporation bills, to be issued in respect of authorised expenditure. The bills will be dated February 12, and will be payable at six months after date.

CITY OF COPENHAGEN 4 PER CENT. LOAN OF 1908.

An issue of £2,200,000 4 per cent. bonds of this Corporation is offered by Messrs. C. J. Hambro and Son and the Union of London and Smiths Bank at the price of 95½. The proceeds will be mainly devoted to large municipal works of a remunerative nature, and to the repayment of floating debt. The loan is repayable at par within about 60 years by annual drawings, or by purchase when below par, and the municipality undertakes not to increase the sinking fund or pay off the whole loan before May 1, 1918. According to official annual reports the value of the city assets at the end of 1906 amounted to £6,618,937, exclusive of properties worth £2,736,660, which are devoted to municipal purposes only and are not yielding income. The city's debts at the same date, including about £500,000 on temporary loan, aggregated £5,775,614, while the revenue increased from £1,150,314 in 1904 to £1,284,001 in 1906, and the expenditure, including interest and amortisation charges, rose from £1,102,130 to £1,234,616. For 1907 the revenue was estimated at £1,369,444, and the outgoings at £1,364,331, and this evidence of progress makes the bonds look attractive.

R. AND J. DICK, LIMITED.

Originally established about 60 years ago as manufacturers of boots and shoes, this firm's name is perhaps better known in connection with the Balata driving belt invented in 1885. On the death of Mr. James Dick in March, 1902, the partners in the firm were entitled to purchase from Mr. Dick's trustees the whole business and assets for the capital sum standing to his credit in the books at the time of such purchase, and also the factory and fixed machinery at the sum of £20,000. At the time of Mr. Dick's death his capital, apart from the value of goodwill, was £351,551, and there was a bank overdraft then existing of £143,177. By December, 1906, Mr. Dick's capital had been reduced to £194,039, while the overdraft had been paid off, and the present partners acquired the business for £194,039 and the above-mentioned £20,000. The business is now converted into a limited liability company with a share capital of £650,000, divided equally into 5½ per cent. cumulative preference and ordinary shares of £1 each, of which the preference shares are offered for subscription and the ordinary shares are taken by the vendors with £225,000 in cash and £100,000 in cash or preference shares in payment of the purchase price. The assets acquired consist of the Greenhead Works, Glasgow, valued at £27,100, machinery, &c., £51,425, stocks and stores at the

factory and shops £202,907, goods, stock and cash in hands of agents, and book debts guaranteed to produce £260,854, and cash £11,848. To these is added £155,000 for goodwill, making a total of £709,224, from which is deducted £59,224 due to sundry creditors. Profits are set out for the four years and eight months to August 31, 1907, and show an average equal to £65,122 per annum, but the figures are arrived at before providing for depreciation. Preference dividend, however, will only take £17,875, so that there should be ample margin, and as no further capital can be issued to rank *pari passu* with or in priority to the preference shares and no debentures can be created without the consent of a three-fourths majority of the preference shareholders, these may be classed as a good industrial security.

Bristol Tramways and Carriage Co., Limited.

Originally incorporated in 1887, this company owns and operates the system of electric tramways supplying Bristol and its immediately adjacent districts in Gloucester and Somerset, and also carries on an important general carriage business. In 1898 Acts were obtained authorising considerable extensions and the construction and conversion of the entire system to be operated by electrical power on the overhead system. To meet the outlays already made or to be made on these extensions and for other developments of the business subscriptions were invited for an issue of £250,000 4½ per cent. mortgage debenture stock at par, payable in instalments at intervals of about three months, the last being one of 40 per cent. on October 1. This stock is secured by a trust deed giving a specific mortgage upon freehold and leasehold properties, and a floating charge upon the undertakings and other properties, subject only to the 4 per cent. mortgage debenture stock already created. It will not be redeemable for ten years, but may be repaid at par on six months' notice at any time after January 1, 1918. The average profit for the five years ended December 31, 1906, was £87,358, and as the interest on both debenture issues will only require £21,250 there is ample margin, and the stock should be a fairly good investment.

Universal Gas Methane and "Buisson Hella" Co., Limited.

A particularly unattractive proposition is put forward by this company, which has a capital of £600,000, divided into 300,000 7 per cent. non-cumulative preference shares of £1 each and 600,000 10s. ordinary shares, and is inviting subscriptions for the preference portion. Briefly put, the objects of the company are to acquire the patents in all countries, except France, of a new filament for making incandescent gas mantles, and also those of a new gas for lighting and heating. Apparently neither the one nor the other has yet been tried on a commercial scale—in fact, it is expressly stated that the various processes in respect of the manufacture of gas are in course of completion—but wonderful results are expected. The Mining and Industrial Corporation, Limited, which is acting as vendor and promoter, does not, however, seem to have any great faith in the lasting qualities of the mantle as a profit-earner, and would like to have the purchase price of £480,000 in cash if possible. Ridiculously high though this price is for untested inventions regarding which only probable results can be put forward, the company is expected, in addition, to hand over 20 per cent. of the nett profits earned on the exploitation of the gas invention and on its resale to any other company. Subscribers, if any, are promised a non-cumulative dividend of 7 per cent. and 20 per cent. of surplus profits after the ordinary have received a dividend at the same rate, until the total dividends on both classes amount to 100 per cent., when all the profits which the company shall determine to distribute are to be divided in the proportion of 20 and 80 per cent.

Bank of Montreal.—Owing to unsatisfactory health, Mr. Alexander Lang has resigned his membership of the London committee.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and January 25, 1908:—

Revenue and other Receipts.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Jan. 25, 1908.	Total Receipts into the Exchequer from April 1, 1906, to Jan. 26, 1907.
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,334,212

Total			133,852,178	137,300,172

Note.—The Revenue and Expenditure figures for 1907-8 have been adjusted to give effect to Section 17 (5) of the Finance Act, 1907 (7 Ed. VII., cap. 13), with respect to Local Taxation Grants, and the figures for 1906-7 have been similarly adjusted for the purpose of comparison.

Mem.—Treasury Bills outstanding on January 25, 1908:—

Bills issued by Public Tender	£13,213,000
Bills otherwise issued	2,500,000
Total	£15,713,000

Treasury, January 28, 1908.

Union of London and Smiths Bank.—Deposit and current accounts on January 22, came to £35,653,866, acceptances and liabilities by endorsement to £3,941,446 and other liabilities to £803,635, while assets consisted of cash in hand and at Bank of England £6,205,654 money at call and short notice £5,802,698, investments including reserve fund £5,996,600, and discounts, loans and other advances £21,676,364.

National Provincial Bank of England.—The statement for December 31 shows liabilities on notes or bills of £639,189, and on simple contracts of £54,986,212, against assets consisting of cash on hand and at Bank of England £9,250,592, money at call and short notice £3,280,211, British Government and other securities £15,003,370, and bills of exchange £33,441,228.

TRADE AND PRODUCE.

WHEAT.—Demand has been small this week, and prices have shown some irregularity. Holders of spot parcels have 2d. per cental under last week's values to effect sales, and English wheats have been offered from 6d. to 1s. under last week's prices, but even so they are over 8s. per quarter above the price in January, 1907, and it cannot be said that markets as yet show any real signs of weakness. Farmers' deliveries continued moderate last week, amounting to 78,161 qrs. averaging 35s. 6d. against 80,321 qrs. averaging 26s. 2d. a year ago, but foreign shipments continue to increase each week. Last week's imports from abroad came to 342,790 qrs. against 297,587 qrs. in the same week of last year, while the quantities of wheat and flour on passage to the United Kingdom are estimated at 3,340,000 qrs. against 3,135,000 qrs. last week, and 1,290,000 qrs. against 1,110,000 qrs. as going to the Continent. American markets were firm during the earlier part of the week, strengthened by unfavourable crop accounts and good export business, but became more bearish on Wednesday, and later still suffered a sharp break on foreign selling and news of the heavy Argentine offerings abroad. The visible supply shows a decrease of only 8,000 bushels from last week.

WOOL.—London sales have progressed favourably so far, and the 5 per cent. rise in price for finer merinos has been fully maintained. Crossbreds also have occasionally reached a 5 per cent. rise on initial prices and the decline of 5 per cent. that marked faulty and inferior descriptions at the opening has almost entirely disappeared. Prices, in fact, at these sales are from ½d. to 1d. above other markets. Outside London there is next to no business being done in raw materials, either of colonial or home-grown wools. Yarns are more active; there is a good general demand and prices seem to be more firmly established. Consumers who have hitherto held back their contracts owing to the uncertainty of prices are now seeing the possibility of higher ones and are anxious to cover their requirements as soon as possible. Makers of fine manufactured goods are having a more or less slack time, and new orders are not coming in very freely, but when cheaper materials are in use they are better employed, some mills running overtime.

COTTON (from our Manchester correspondent).—During the week under review we have experienced a quiet market, and no particular improvement can be recorded in the amount of business being put through. Prices for piece goods do not give satisfaction to manufacturers, and here and there sellers have been forced to accept orders at very low rates. American cotton has been irregular in price, various changes occurring from day to day. The sales on the spot in Liverpool have been large, the total on Thursday being 14,000 bales. Very little interest is being taken at the present time in the outlook for the American crop. Most people have made up their minds that the yield will be about 12,000,000 bales. Here and there a little better inquiry for cloth has come through, but few sales of weight have occurred. Shippers, on the whole, are not stimulated to act with any freedom. China buyers seem to be feeling their way towards placing orders of fair extent. A number of small lines have been put through both in staple and fancy goods. The failure of a firm in China is reported, but it is not expected that Manchester will be vitally affected. Recent rains in India have improved the prospects for the offtake in piece goods. Buying, however, for Bombay and Calcutta has not been at all important. Numerous offers cannot be entertained, and buyers are slow at raising limits. The Mediterranean markets have remained dull and very little fresh business can be found. Small lines are mentioned for South American markets, but there is no free buying. Burnley goods have moved off slowly. T-cloths and Mexicans have dragged in demand. Coloured woven goods and sateens as made in Nelson have been very quiet, and some makers are wanting business. Buyers for the home trade are operating from hand to mouth. Here and there a moderately-sized order is mentioned, but, on the whole, lower prices are anticipated. American yarns for home consumption have been slow, and spinners have lost part of their margin. Twists are more plentiful, and rates are irregular. Medium wefts hold their own fairly well. Ring yarn is not so healthy as some time back. In export descriptions only a retail trade has transpired. Egyptian yarns made in Bolton and district have been very quiet, and order lists are running down all along the line. Double yarns in fine numbers are backing up in first hands. Sir Jacob Behrens and Sons state that the ginners' report, published on the 23rd ult., gave the amount of cotton ginned up to January 16 as 10,337,000 bales against 12,176,199 bales last year, and 9,989,634 the year previous. Although this report was considered "bullish," the market did not respond; indeed, prices have in the meantime weakened, and yesterday's noon rates in Liverpool showed a loss of some 20 points when compared with those of a week ago. Reports from America were rather more favourable this morning, and about half the loss has been regained. The settlement of the dispute amongst ring-spinners in Lancashire had little or no effect upon the cotton market, as it was always thought that matters would be amicably arranged at the last moment. Egyptian cotton shows no change.

COAL.—There is practically no change in the position of this trade since last week. Prices have not fallen very much, though they certainly have not gone up. Welsh steam now ranges about 17s. to 18s., a decline that is welcomed by manufacturers and ironmasters, but which coalowners declare is only temporary, and is due to the large output at present. Scotch prices also are quoted from 3d. to 6d. lower on all large orders, and from here through shipments are now better than they have been for some time, showing a large falling off from those of the same week last year. Steams in the Shetfield district are doing an active trade, considering the restricted [illegible] of the season. At present contracts with the [illegible] are to the fore, but no agreement can be come to as regards price, [illegible] holding out to their demand of 11s. 6d. per ton. House coals continue firm and in good demand.

COPPER.—Opened with a downward tendency in values and a very restricted demand. Business and prices both ruled [illegible], and sellers forced values up to £62 and £62 15s. on Tuesday and Wednesday, but Thursday's market gradually turned somewhat downward again till the day showed a loss of 22s. 6d. on cash transactions and 17s. 6d. on three months. Yesterday was very quiet, the cash price leaving off at 61¼-½ and the three months' price at 61 7/8-62⅛.

TIN.—Prices dropped in the earlier markets and then recovered later, about £2 on both cash and forward metal. Early rapid fluctuations then set in, aggressive sales and liquidation, by the one hand, sending it down and speculative buying for American account, on the other, sending it up. The Dutch auction held on Wednesday had but a poor result, the average price being only £122 7s. 6d., but this did not affect the market much, and values closed yesterday without much alteration on the day at £124 5s. cash and £125 5s. To-night the prices are 124 to 124½ for cash and 124¾-125¼ at three months.

IRON AND STEEL.—Reports on Cleveland pig-iron show a slight improvement in the market this week. A fair amount of business has been done, and this has steadied prices, but most of the buying has been for present wants, as consumers do not care to venture much on future metal. Hematite prospects are less satisfactory. Demand is falling off, and more furnaces have had to be blown out to keep production within manageable limits, and prices are again lower. Steel makers are as depressed as iron, and complain of the lack of orders, and in the manufactured goods of both trade is slow generally.

TEA.—From the returns just issued by the Indian Tea Association, it appears, say Messrs. W. J. and H. Thompson, "that the balance remaining is much the same as it was a year ago, enough to provide, roughly, 30,000 packages per week to the end of June"—not too much, in view of the fact that the country generally is admittedly working on short stocks. The market will, therefore, remain steady probably, and should supplies from Ceylon turn out as small as at present they promise to do, prices will probably again go up. This week's quantities of Indian were rather larger, 41,769 packages being offered, quite enough for current requirements with country trade still quiet. Little change took place in prices, but buyers showed more desire for the better qualities, and occasionally paid a little dearer for them. Medium and common sorts, on the contrary, showed slight irregularity here and there. For the week the average price on the sale came to 8.38d. against 7.88d. a year ago. Ceylon importers brought forward 25,773 packages, and bidding was active for all descriptions, and where quality showed a slight improvement prices were sometimes slightly higher, and for the week 8.08d. was the average price against 7.8d. in 1907. Java sales of 2,719 passed steadily and without much variation in price. The 12,404 packages sold on garden account during January averaged 7.80d. against 13,468 packages averaging 7.13d. in January, 1907.

SUGAR.—The market, Mr. Czarnikow reports, has remained firm, and with a continuation of small Cuban receipts (21,000 against 61,000 against 37,000 tons) buyers became more interested, and May beet moved from 10s. 0¼d. to 10s. 2½d. to 10s. 2¼d. Should the yield in Cuba be much below 1,100,000 tons, the chances of Javas alone being sufficient to supply the deficiency in the United States during September-October become smaller, even with the present less favourable consumption, therefore events in Cuba require close watching in order to judge the future in Europe. The premium for August beet over October-December is based thereon. Regarding the next beet crops, which really should be the regulator of summer prices, as long as the American beet requirements are problematical, it seems that no increase in sowings is, so far, anticipated, but the next three months may yet bring a change in the situation. Labour troubles, especially with Polish and other imported labourers in Germany, are not conducive to extensions of beet cultivation. Operators, however, show no interest in October-December; it is not sufficiently speculative, and cannot be manipulated. Legislation regarding the Convention will probably pass shortly; it is before the Parliament in Germany, where the Agrarian party are willing to vote for its prolongation provided the Government reduces the excise from 14 to 10 marks per bag. This the powers that be are willing to do as soon as there are funds available. Refiners in the United States have managed to reduce spot quotations for 90 Centrifugals to 3 80 cents, and have expected ready in Cuban sugar to get at a lower price. This, says Mr. Czarnikow, indicates, on the one hand, the continued scarcity of ready sugars and, on the other, the freer offerings of Cubans, caused probably by planters finding it necessary to realise part of their production in order to meet their financial commitments. Meltings in the three ports reached 22,000 tons for the week, meltings came to 25,000 tons, reducing stocks to 78,000 tons.

The directors of the Pataling Rubber Estates Syndicate are offering a further 2,500 £1 shares at a premium of £3 per share to existing holders in the proportion of one new share for every eight held. Established in 1903 to acquire an estate of 2,000 acres in the Malay States the company has paid dividends of 20 per cent for 1905 and 40 per cent. for 1906, while an interim distribution of 10 per cent. was paid in October last. The present quotation is 6½—7 xr, so that there is a fair bonus to holders on the issue

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for the week ended Jan. 21, $3,573, increase $703; aggregate from July 1, $147,461, increase $43,493.

Argentine North Eastern. — Traffic receipts for week ended December 27, £2,887, decrease £478; aggregate from July 1, £76,840, decrease £6,297.

Assam Bengal.—Traffic receipts for 10 days ended December 31, Rs. 1,08,016, increase Rs. 2,143; aggregate from July 1, Rs. 25,08,841, increase Rs. 1,39,472.

Bilbao River and Cantabrian.—Traffic returns for November, £9,071, decrease £2,123; aggregate from January 1, £100,047, decrease £12,676.

Buenos Ayres Central.—Gross receipts for December £9,952, decrease £1,355; aggregate from Jan. 1, £132,935, increase £10,966.

Canadian Northern Railway.—Traffic receipts for week ended Jan. 21, $135,700, increase $63,600; total from July 1, $5,722,700, increase $1,546,100.

Egyptian Delta.—Traffic receipts for week ended January 11, £5,691, decrease £379; aggregate from January 1, £216,938, increase £17,959.

Lucknow Bareilly Railway.—Traffic receipts for week ended December 21, Rs. 26,787, decrease Rs. 3,315: aggregate from July 1, Rs. 6,52,077, increase Rs. 4,043.

Midland Uruguay.—Receipts for month of December, £6,808, decrease £564; aggregate from July 1, £37,185, increase £2,570.

North Western of Uruguay.—Traffic receipts for Dec., $17,600, decrease $3,304; aggregate from July 1, $121,864, increase $22.

Quebec Central Railway.—Traffic receipts for the 3rd week of January, $16,844, increase $4,188; aggregate from January 1, $41,535, increase $6,980.

Quebec and Lake St. John.—Traffic receipts for Dec. $58,375, increase $6,111, aggregate receipts $658,636, increase $60,714.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended December 21, Rs. 20,188, increase Rs. 2,441; aggregate from July 1, Rs. 5,37,977, increase Rs. 43,688.

Uruguay Northern.—Gross receipts for month of Oct., £2,235, increase £923; aggregate from July 1, £7,502, increase £802.

White Pass and Yukon Railway.—Traffic receipts for week ended January 7 amounted to $2,250.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending January 25, £1,040, decrease £341; aggregate from January 1, £3,563, decrease £1,459.

Cockermouth and Keswick Railway.—Receipts for week ending January 25, £681, decrease £30; aggregate from January 1, £2,510, decrease £206.

East London Railway.—Traffic receipts for November, £3,650, decrease £749.

East and West Yorkshire Union Railways.—Traffic receipts for week ended January 25, £481, increase £57; aggregate from January 1, £1,733, increase £26.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending January 22, £566, decrease £86; aggregate from Jan. 1, £1,655, decrease £280.

Blessington and Poulaphouca.—Traffic receipts for week ending January 22, £5, decrease £1; aggregate from January 1, £17, decrease £5.

Bristol Tramways and Carriage.—Traffic receipts for week ending January 24, £4,615, increase £317; aggregate from Jan. 1, £18,217, decrease £160.

British Electric Traction.—Receipts of all the Associated Companies for the week ending January 24, £24,992; 428½ miles:

Burnley Corporation.—Traffic receipts for week ending January 25, £1,169, increase £84; aggregate from January 1, £4,721, increase £106.

Dublin and Blessington.—Traffic receipts for week ending January 22, £91, decrease £3; aggregate from January 1, £294, decrease £19.

Dublin and Lucan.—Traffic receipts for week ending January 24, £92, increase £12; aggregate from Jan. 1, £302, decrease £13.

Dublin United.—Traffic receipts for week ending January 24, £4,618, increase £274; aggregate from Jan. 1, £16,137, decrease, £70.

Edinburgh and District.—Traffic receipts for week ending December 28, £4,918, increase £542; aggregate from January 1, 1907, £257,110, increase £2,644.

Hastings and District.—Traffic receipts for week ending January 23, £725.

Isle of Thanet.—Traffic receipts for week ending January 25, £198, increase £24; aggregate from Oct. 1, £4,687, increase £89.

London County Council.—Traffic receipts for week ending January 18, £29,637, increase £3,070; aggregate from April 1, £1,312,674, increase £213,725. Miles 115¾, against 114.

London General Omnibus.—Traffic receipts for week ending January 25, £15,656, decrease £515; aggregate from Jan. 1, £67,290, decrease £6,122.

London Road Car.—Traffic receipts for week ending January 25, £6,161, increase £304; aggregate from Jan. 1, £17,657, decrease £5,570

London United.—Traffic receipts for week ending January 25, £4,631, increase £57; aggregate from January 1, £17,407, decrease £1,453.

Provincial Trams.—Traffic receipts for week ending January 25, £1,321, increase £97; aggregate from Oct. 1, £25,034, increase £984.

Rossendale Valley.—Traffic receipts for week ending January 24, £173, increase £5.

Sunderland District.—Traffic receipts for week ending Jan. 22, £418, increase £57; aggregate for 12 weeks £5,454, increase £864.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending January 26, £961, increase £56; aggregate from January 1, £4,015.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending January 21, £17,464, increase £1,091; aggregate from January 1, £53,871, increase £2,692.

Auckland Electric.—Traffic receipts for 25 days ending December 31, £11,367, increase £1,554; aggregate from January 1, £137,719, increase £8,019.

Brisbane. — Traffic receipts for month of December, 1907, £15,328, increase £1,829.

British Columbia Electric.—Nett earnings for December $83,808, increase $22,878. Aggregate nett earnings, including income from investments from July 1 to Dec. 31, $502,320, increase $141,546.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for 7 days ending January 28, £7,275, increase £1,922.

Calcutta. — Traffic receipts for week ending January 25, Rs. 47,000, decrease Rs. 6,774; aggregate from January 1, Rs. 2,00,296, decrease Rs. 45,622.

Cape Electric.—Traffic revenue for month of December, Cape Town, £11,679; Port Elizabeth, £3,751.

Carthagena and Herrerias.—Traffic receipts for the month of December, £3,254, decrease £2,252; total from January 1, £51,131, decrease £1,396.

Geneva Trams.—Earnings for December, fr. 189,275; increase fr. 9,122.

Kalgoorlie Electric.—Gross receipts for December, £4,109; aggregate from January 1, £47,824.

Lisbon Electric.—Earnings for November, milreis 46,117.

Madras Electric.—Traffic receipts for fortnight ended January 15, Rs. 19,685, increase 14 per cent.; aggregate from January 1, Rs. 19,685, increase 14 per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for December, £49,000.

Mexico.—Nett earnings for month of December, $208,386, increase $49,715; aggregate nett earnings from January 1, $2,163,490, increase $263,819.

Perth (W.A.) Electric. — Gross receipts for week ended January 24, £1,472, decrease £37; aggregate from January 1, £5,264, decrease £505.

Rio de Janeiro.—Nett earnings for December, $231,793; in $70,793; aggregate from January 1, $2,183,759.

Sao Paulo.—Traffic returns for December: nett earnings, $124,520, increase $5,520; aggregate from Jan. 1, $1,352,306, increase $59,047.

Twin City Rapid.—Traffic receipts for the month of November, $497,428, increase $38,791; aggregate from January 1, $5,552,879, increase $402,984. Nett traffic receipts, $233,018, decrease $649; aggregate from January 1, $2,852,445, increase $105,004.

D. J. H. CUNNICK.
} Joint General Managers.

In accordance with the provisions of the Companies Act, 1900, we certify that all our requirements as Auditors have been complied with; and we report that we have ascertained the correctness of the Cash Balances and the Money at Call and Short Notice at the Head Office, and the securities representing the investments of the Bank; and having examined the Balance-sheet in detail with the books at the Head Office and with the certified returns from each Branch, we are of opinion that such Balance-sheet is full and fair and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs as shown by such books and returns.

20th January, 1908.

EDWIN WATERHOUSE,
WILLIAM BARCLAY PEAT,
Chartered Accountants.
} Auditors.

At the Annual Meeting (Robert Wigram, Esq., in the chair), the above Report was adopted. The retiring Directors, Claude Villiers Emilius Laurie, Esq. William Robert Moberly, Esq., and Robert Wigram, Esq., were re-elected.

Mr Edwin Waterhouse and Mr William Barclay Peat were re-appointed Auditors for the current year.

The best thanks of the Proprietors were given to the Directors, General Managers, Branch Managers, and other Officers of the Bank, for their efficient services, and to the Chairman for his able conduct in the chair.

The National Provincial Bank of England, Limited, having numerous Branches in England and Wales, as well as Agents and Correspondents at home and abroad, affords great facilities to its customers, who may have money transmitted to the credit of their Accounts through any of the Branches, free of charge.

At Head Office and Metropolitan Branches Deposits are received and interest allowed thereon at the rates advertised by the Bank in the London newspapers from time to time, and Current Accounts are conducted on the usual terms.

At the Country Branches Current Accounts are opened, Deposits received, and all other Banking business conducted.

The Bank undertakes the Agency of Private and Joint Stock Banks, also the Purchase and Sale of all British and Foreign Stocks and Shares, and the collection of Dividends, Annuities, &c.

Circular Notes and Letters of Credit, payable at the principal towns abroad, are issued for the use of Travellers.

The Officers of the Bank are bound to secrecy as regards the transactions of its customers.

Copies of the Annual Report of the Bank, Lists of Branches, Agents, and Correspondents may be had on application at the Head Office, and at any of the Bank's Branches.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Reduced from 5 per cent. on January 23.)

Norfolk House, Friday Evening.

Assured ease with a downward tendency is the popular view of prospects in the London money market, and many look for a 3½ per cent. Bank rate soon, perhaps next week. We should not be surprised, for the scarcity of floating credits which has driven the market to the Bank for considerable sums in seven-day loan at 4½ per cent. in the last days of the month represent merely a Treasury induced pinch. At the beginning of the week call loans were in fair supply at 3 to 4 per cent. and seven-day money cost only 3½ per cent. The subsequent advance to 4 and 4½ and 3¾-4 per cent. respectively was nothing but the end of the month and Treasury absorption, and it is hoped the squeeze will soon be over. This morning, however, a few bills went direct to the Bank, a fact indicative of market discomfort. Short loan rates were also firmish at 3½ to 4 per cent. for call, 3¾ for seven-day, and 3 to 3½ per cent. for "long" money. The truth is the market is not rich, cannot be for the next two months unless the Bank secures a lion's share of the gold imported, or unless the Treasury disburses its accumulations faster than usual, by Sinking Fund operations or otherwise.

Discount rates were steady at 3½-⅝ per cent. for three months' bank bills until Thursday, and are now little better than 3 7/16-3½ per cent., the influence of the scarcity in short credits being more than outweighed by the hope of lower rates still in the immediate future. Long usances have therefore never risen to more than 3⅝ per cent., and a good deal of business has been done at 3¼ per cent., while yesterday 3⅜ per cent. was talked of as a practicable rate for mixed parcels of four and six months' bills to be paid for next week. The Continent is still a moderate competitor for fine three months' bills, and the demand from that quarter seems effective enough to keep our own market from hardening. It, on the contrary, appears bent on slipping down too fast.

In this weakness there appears to be some obliviousness to the market's position as disclosed in the Bank return. From some aspects it is a remarkably strong return, and the reserve is now up to £28,933,000, or £1,410,000 more than last week's total and £4,092,000 more than the figure of a year ago. Currency, in fact, has been coming back from the provinces in extraordinary amounts, one estimate being that altogether some £6,000,000 has in this way come back since the New Year. For all that the open market is by no means rich, and other deposits are actually down £1,229,000 on the week to £42,099,000, a figure implying poverty, the Japanese balances allowed for. Therefore the market has been borrowing these last few days, although other securities are down £508,000 on the week. Their total is indeed £3,403,000 less than at this time last year, a distinctly favourable sign from some points of view, although also indicating a reduced volume of business, probably to a large extent of speculative business. Why, then, is the open market so poor? The answer is found in an increase of £2,131,000 in the public deposits or Government balances, and yet the total of these balances is, at £8,884,000, nearly £250,000 less than it was this time last year. The revenue collection, however, tends to drain the open market of cash from now to the end of March, and therefore we cannot look for credit abundance unless gold comes steadily in. The supply has not been embarrassing during the past week when the nett import was only £258,000. The Bank of England, however, has begun to pay back the Bank of France, 268,000 sovereigns having been withdrawn for Paris on Tuesday, and probably much of the gold coming into the open market will go to Paris without passing through the Bank. There was, for instance, about £1,000,000 to be disposed of last Monday, and the Bank of England secured little more than a third of it, the rest going abroad, presumably to Paris in liquidation of our market's gold obligations falling due there a fortnight hence. A movement of this kind would be all to the good, and if the two Banks continue to amicably divide the market supply in this fashion, there will be no need to fear disturbing shipments of the metal from London back to Paris. Besides, the continual buying of bills in our market by the Continent is also tending to dissipate any danger of that kind, although the extent to which the expiring paper discounted for gold has been renewed is, we are assured, much smaller than our market counts upon. Be this as it may, the Paris cheque is weak to-night at 25.16, and that points to competition for the gold, about £500,000, due in the market on Monday.

Gold supplies promise to be fairly abundant, leaving out of account any chance of a return of the metal from New York. So far Argentine withdrawals have been considerably less than the estimate, and although some coin is certain to disappear in that direction unusual assistance in meeting the demand is coming from various quarters, from Egypt noticeably, whence about £850,000 is said to be now on its way to us or to Paris on our account.

Almost as rapidly as here the tension on foreign money markets has disappeared. Last Saturday the German Reichsbank lowered its discount rate from 6½ per cent. to 6 per cent., and its rate of interest on advances by ½ per cent. to 7 per cent. The Bank of Norway has come down to 5½ per cent. from 6, the State Bank of Sweden from 7 and 7½ to 6½ and 7 per cent., with a corresponding decrease of ½ per cent. in its rates on advances to 6½ and 7½ per cent. The National Bank of Denmark has also come down by ½ per cent. to 6½ and 7 per cent. for discounts and advances respectively, and the State Banks in Italy have brought down their minimum rates on first-class bills from 5 per cent. to 4½, and their ordinary rates of discount and for advances from 5½ per cent. to 5 per cent. Even the Imperial Bank of Russia has reduced its rate by 1 to 6½ per cent. These rates are still high compared to ours or to the 3 per cent. of the Bank of France, but that they should have come down at all indicates diminished fear, possibly also diminished trade. And the positions revealed by most of the bank figures published appear to warrant the change, the turn round in the Reichsbank figures being quite remarkable. The week previous the note circulation was £5,884,000 above the legal maximum, and last week it was £3,237,400 below that maximum, the note circulation having in the interval declined £5,307,000 concurrently with an increase of £3,394,000 in the cash in hand. A less favourable display is made by the Bank of France, whose note circulation went up by £2,425,000 at the end of the month, while the increase in the gold in hand was under £123,000, and, in fact, the proportion of gold to the active circulation is still little more than 54 per cent.

SILVER.

A brisk demand was experienced for silver to be shipped by the steamer which left for Bombay yester-

day, and will arrive in time for the February settlement there. Quotations under this stimulus advanced to 25¾d. per oz. for cash and 25 15/16d. per oz. for delivery two months forward, but they relapsed on Wednesday to 25½d. and 25 11/16d. per oz. on a report that the United States Treasury had stopped its purchases of the metal. The story was proved incorrect by the announcement that 200,000 ozs. had been bought, and Messrs. Samuel Montagu and Co. state that they are given to understand that the buying has only been suspended temporarily during the time that the Mint is busy with gold coinage. A recovery of ⅛d. and 1/16d. per oz. respectively promptly followed, as, in addition to the Indian requirements, there was a moderate inquiry for the metal for shipment to the Far East by the German boat leaving on Tuesday next. This steady buying has practically exhausted the stocks of spot silver for the time being, and the premium on forward metal has been reduced to ⅛d. per oz. Quotations dropped back a little on Thursday and yesterday, but closed fairly steady at 25½d. and 25⅝d. per oz., without much business doing. Applications for the Rs. 80,00,000 Council drafts in India offered this week amounted to Rs. 1,67,00,000 in bills and Rs. 76,00,000 in telegraphic transfers. Of these Rs. 54,96,000 were alloted in bills and Rs. 25,04,000 in transfers, tenders at 1s. 3 29-32d. and 1s. 3 15/16d. per rupee respectively receiving about 32 per cent. Next week another Rs. 80,00,000 will be offered.

*** We shall commence next week the publication of an article entitled "A German View of English Banking," from the pen of the London correspondent of the *Frankfurter Zeitung*.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict. cap. 32, for the Week ending on Wednesday, January 29, 1908.

The Stock Markets.

So complete is the turn round on the Stock Exchange that one has difficulty in believing it can be all real. It, however, is quite in order, and the improvement in prices seems likely to continue for some little time. For one thing, there is the natural elation of the public mind over the escape of the market from what at one time threatened to be a crisis of the gravest possible description, and for another markets were nearly all in the position best calculated to bring about a rapid recovery. The good stocks have not been in large supply for a long time back, at any rate, on the Stock Exchange itself. Lumps of them were no doubt stowed away in strong boxes held by individuals and institutions capable of facing the depreciation with more or less equanimity, but in the market itself the habit has been to work with an "even book." Dealers, that is to say, endeavoured to avoid placing any serious amount of stock in their safes, and sought to make each day's buying and selling as near as possible balance. There was no other course open for them in view of the market outlook, and in face of the almost continuous depreciation in prices. Add to this the existence in particular directions of a more or less unwieldy speculation open for the fall, and we have all the elements requisite to a swift recovery in markets the moment the pressure of dear credit was removed.

All this is true enough, but as an experienced broker said to us this week, jumps of the kind we are now witnessing are not good for the genuine investor. He is rather driven away from the market than attracted to it by the rapidity of the advance, and where more or less speculative securities are in question the position is still artificial to a dangerous extent. Intrinsically many of these speculative securities are not worth anything like the prices at which they are now quoted, but they are forced up and kept up by the position of the account. Where over-selling on a large scale exists, as in things like Canadian Pacific and Hudson's Bay shares, intrinsic qualities or future probabilities have nothing whatever to do in determining current prices. Cheap money has now given the advantage to holders for the rise, and enables them to drive the bears to close, with the result that prices advance when gauged by facts and prospects they ought to be weak.

and the high prices create a false idea of the true market position. The more prices go up the weaker the market may be growing, because the more the bear account is reduced the less is the support remaining, and a condition may thus easily arise where the slightest adverse influence coming to bear suddenly upon players might bring about an apparently disproportionate collapse.

We have given extreme examples of the market position in regard to speculative or semi-speculative stocks, and they unfortunately illustrate a state of business far more general than wholesome. As the same broker said, "It is all bull and bear nowadays, and the investor is left out of account." The very money articles published daily by the newspapers emphasise this unwholesome change. This move is "good for the bulls," that other "a triumph for the bears," and the artificiality thus indicated represents the worst possible condition for the man with money to put away. It makes a fool, too, of the careful broker, nine times out of ten. If he looks under the surface and gives heed to the indications afforded by facts, he is nearly always put in the wrong by actual price movements in times like these, and often loses credit and custom through his honesty.

Ought the public, therefore, to keep away from speculative markets, as we so persistently advised them to do all last year? Really, we are in the position of the broker, and feel unable to give advice of any particular value. Readers must judge for themselves, and try to estimate what the chances of the Money market are, how far the rise is likely to be checked by the outpouring of new securities, and whether the exacting demands of our own and other Governments are likely to put a drag upon the recuperative forces already presumed to be at work. Our own feeling is that the present movement may go on for some little time yet, and that those who hold good stocks on which a loss is still shown should not be in a hurry to cut what remains of this loss. On the other hand, where losses are recovered and replaced by a profit, no matter how modest, our feeling is that holders should begin to secure that profit. For, after all, there is an unsubstantiality in the present movement which does not warrant us in expecting it to last very long.

Consols and Other Trustee Securities.

Look at the Consol market how brilliant it is compared to what we have had to mourn over for years past. The price has gone up 30s. in one week, and market prophets are jubilantly predicting 90 as the figure to be reached almost immediately. They ground this forecast upon the renewed buying, the absence of stock in the market, and, above all, on the fact that £3,000,000 of sinking fund money is about to be set free. Cheap money, too, is bound to last for another six or eight months, they tell us, and the Bank rate may be down to 3½ per cent. next week, so what is there to prevent Consols from going to 90 or above that figure? Well, if the price does reach 90 we shall have to resume giving the advice to clear out, for as long as the trade of the country continues to suffer from the shock given to it in the end of last year we shall be liable to disquieting prices. It, moreover, is by no means a certainty that the Chancellor of the Exchequer will devote his sinking fund money to the purchase of Consols, and if he is skilful he will do nothing of the kind, because it is much more necessary that the floating debt should be brought down than that the taxpayer should be made to pay an artificially raised price for the Consols bought to be extinguished.

Prices, however, are now going up, and everything in the trustee list, where any life at all is visible, and often where none is visible, has gone up. India stocks are higher by 1½ to 2½, and the premium on the new loan is up to 3⅜. The improvement has extended to Home Municipal securities, which have been out in the cold for many a month. Dealers have put £1 on to prices for such all through the list, and the stocks of the County Council are quite 30s. up on the week. Colonial inscribed stocks are 1 to 2 higher, and sometimes more, Australian issues being especially in favour amongst the jobbers at least, for the business done by the public is still fragmentary and hesitating. The new Cape loan, however, is quoted at 1½ prem., and everybody is hopeful. We may say the same about Foreign and Colonial Municipal securities, for they, too, are up from 1 to 3, and the Johannesburg loan and Rand Water Board stock are both marked 4 higher, with a fair investment demand.

Contangoes.

No interruption to the improved attitude of markets was caused by the settlement. On the contrary, it rather gave a stimulus to the advance, because money was cheap in all sections of the market. Even rubbish could be borrowed on at 5 per cent., and in the Home Railway market 6 per cent. was about the highest rate quoted except, perhaps, on one or two "heavy" stocks. Money was also rarely more than 5 per cent. on Foreign Government bonds, and on Japanese 4½ per cent. was about the top quotation for loans till mid-February. So it was also on American Railroad shares, and South American Railways cost about 2 per cent. less to carry over than they did in the middle of the month, the rate this time being rarely more than 5½ per cent. Light rates were also current on other speculative things like Mexican Railway stocks, Rio Tinto shares, Hudson's Bay shares, and the market throughout was stimulated by the happy change. Banks, in fact, were unable to get much more than 4 per cent. for their advances to the Stock Exchange. They tried for 4½ per cent., and had to take 4 and 4¼ per cent. for much of their money.

Foreign Government Stocks.

These were just as firm, with one or two exceptions in the Argentine and Brazilian group, as Home Trustee securities, and the week has seen a notable advance in Japanese bonds as well as a recovery in Chilian, Chinese, Spanish, Portuguese and some of the Russian series. Uruguay bonds and the Greek group, as also some of the Central American by-products of the debt creator, have shared in the gains, and naturally German and Prussian stocks are distinctly better on easier money in Berlin, so that this part of the market presents a most roseate appearance.

Home Railway Stocks.

It is otherwise with Home Railways where adverse influences are still at work. The dividends declared have not always been up to expectations, and even when they have the state of the speculative account has not favoured an advance. Worst of all traffic receipts continue to show decreases, the loss on the past week having been, according to the *Railway News*, £44,727, and this has only to continue long enough to kill all disposition to speculate for the rise. South Wales railway accounts, too, are not satisfactory, and everywhere the reports as published indicate the severity of the drain caused by dearer coal and higher working charges of all kinds. Therefore prices have wobbled and are generally worse on the week, the only prominent exceptions being Brighton ordinary and deferred, Great Eastern and North British preferred. Midland stocks, however, have been firm, and North-Eastern and North-Western are slightly better on the week, but the Scotch stocks are anything but buoyant. Debenture, guaranteed, and preference issues, however, are imitating the Consol market with improvements of 1 to 3, especially in debenture and guaranteed stocks, the only noticeable exception being Chatham arbitration preference, which was quoted last night at 40 to 43.

Indian and Colonial Railways.

Prices were all better, too, for Indian Railway stocks, and business has been more visible in that direction where the quiet investor goes by instinct in expectation of safety. The speculation in Can Pac shares has been vigorous enough, and neither bull nor bear have had any advantage on the week, although the poorer traffic show effectually checked a further rise. Grand Trunk stocks rallied towards the end,

and yet these also have not given the scalpers of either host much to boast over, and the gamble has been sluggish. Notable improvements, however, have occurred in the bond issues of the Mashonaland and Rhodesia Railways, with a little buying in them all, and the general list of Colonial Railway stocks presents a favourable appearance.

United States Railroad Shares.

Events in the United States are not favourable to any steady rise in these speculative playthings, and the week's movements reflect the uncertainty, most of the changes being unpleasant. Our market may be unstable or hollow in places, but its tottering characteristics are of no importance at all compared to those dominating Wall Street, and the less people touch these counters the better. A great improvement, however, has taken place in the price of many American Railroad bonds, and it may be with justification in a good many instances, although we doubt whether Mexican Central consolidated bonds are worth $8 more this week than they were last, and do not think that improvements of $2 to $4 in things like Reading general, Northern Pacific joint bonds or Louisville 4 per cents. are movements that should attract eager buyers either here or in the States.

Foreign Railway Stocks.

All these have gone up, and no adverse influence whatever has been produced by the "lock out" of the Argentine Congress after many efforts had been made by the administration to induce it to abandon its strike. Business, however, has not been extensive away from the leading Argentine stocks, and one or two of the Brazilian Railway stocks, particularly Leopoldina. Buying there has been stimulated by the fine traffic returns, and all Argentine stocks are helped by the happy accounts continuing to come over about the harvest. Minor stocks like those of the Colombian National and Northern Railways and the Entre Rios Railways, as well as Arauco bonds, and even Antofagasta stocks, have shared in the advance. Mexican Railway stocks are also decidedly higher upon the week.

Banks, Breweries and Docks.

There are no adverse movements of any moment amongst Home Bank shares, and yet two or three leading ones are quoted 10s. lower than they were a week ago. This is probably due as much to the absence of business as to any other cause. Chartered Bank shares are 30s. better on the week. Even Brewery stocks have been put up in spite of the alarms excited about the coming legislation, and other sources of affliction. Business, however, has not developed to justify the higher prices, and the movement can only be regarded as sympathetic. The Brewery market had to be in the fashion. Why should the debenture stocks of Watney, Combe, and Co. be 4 to 5 better than they were a week ago? London Docks stocks have all hardened on the improved prospects, and the deferred is now dealt in at 70.

Commercial, Industrial, Electric and Other Securities.

The wave of recovery is still feeble in the Commercial and Industrial market, and yet prices there have moved the right way in a great many instances, only the advance has been throughout insignificant aside from some few debenture issues, which are put higher by the jobbers, often without any sign of public interest in them. A cheering improvement of 3½ is also shown by General Hydraulic stock, but there is absolutely nothing to linger over in this large field, nor is there anything particular to note in the Electric Lighting group, where, however, debenture issues are up now and then, and where most changes in shares are favourable. Brush Electric first debenture stock, however, is down 1, and the proposed reorganisation scheme makes us wonder that the prices of its securities should stand where they do. The Montreal State Railway Company is said by the *Times* to have managed to arrange its finances through a sale of £460,000 in 4½ per cent. bonds in London. By help of this money £100,000 of a bank overdraft has been paid off, together with £58,400 in expired 5 per cent. bonds, and £202,000 odd in short term notes. Therefore, a saving of interest is effected, and the company seems also to have increased its share capital lately by an issue of £200,000 or $1,000,000 at 125.

Miscellaneous Securities.

Hudson's Bay shares have again been diligently played with, and have risen 3 on the week, the price being again above 80 most days. The open winter and "a million more acres ploughed" are the ostensible reasons for this movement, but the source of its strength is in the size of the bear account. Peruvian Corporation stocks are all much higher on the revival of well-worn reorganisation rumours, otherwise the Financial, Land and Investment group shows nothing interesting. There has, however, been a further marked improvement in the prices of the great majority of Financial Trust issues, some of which have been lifted £3, £4, and £5 with scarcely a transaction shown. It is otherwise with the securities of the Mexican Central Railways Securities Company, which are 4 to 7 up on Yankee inspiration. Gas stocks are all firm and better where altered. Improvement also continues in the Insurance list, and Royal Exchange stock has reached 195, while Northern Assurance shares were dealt in yesterday at 77⅞, and Phœnix at 33⅜, the whole market being better. Even Iron, Coal and Steel securities look a little more alive than they have done for long, and the only noticeable weakness is in Dunderland debenture stock and in the common shares of the Carnegie Steel Trust, whose exhibit for the past quarter has had a bad effect. Shipping shares are usually undisturbed, and nothing particular has taken place amongst Tea and Coffee and Rubber shares, but Telegraph and Telephone securities are firmer, and the dividend declared by the National Telephone Company has put its deferred stock up to 111. Most changes under Tramway and Omnibus securities are also to the good, although business in them is extremely insignificant, but the shares and debenture stocks of the British Electric Traction are naturally weaker on the postponement of the preference dividend.

Friday Evening.

Markets were a little off colour at the close this evening as is illustrated perhaps by the premiums on new issues as well as by anything else. The new Copenhagen loan is pleasantly received, and the scrip quoted at 1 premium, but the new Cape issue has declined to 1 premium and the new India 3½ per cents. to 3 premium. The premium on Grand Trunk Pacific debenture stock is also weaker at 1¼, and the Buenos Ayres Great Southern debenture issue is now 2 to 3 premium.

Some depression is also noticeable in the Home Railway market, which does not like the threatened opposition to the absorption of the Great Central by the Great Northern, and which was disappointed at first by the North-Eastern and Hull and Barnsley dividends. The Great Northern dividend was up to the more sanguine expectations, but at first the North-Eastern distribution seemed a great disappointment. Some people had looked for a declaration at the rate of 7½ and even 7¾ per cent., and when only a 7 per cent. rate, the same as a year ago, was announced, naturally the market sulked. In reality, however, the announcement is very good because it emphasises the change in policy amongst Home Railways whereby something is kept in hand for a rainy day. In other words, out of the past half-year's revenue £120,000 is placed to a special reserve, and even then the balance carried forward is £38,200 up at £121,000. The Great Northern Company gives 5 per cent. per annum on the ordinary stock, which permits the "A" and deferred stocks to get 2 per cent. as compared with 1¼ per cent. a year ago, when the loss of the Grantham accident had to be provided for.

The third New York bank of the three known to be in difficulties stopped payment this morning, viz., the Oriental, and that had a depressing influence upon the Yankee market. It is also announced that £10,000,000 of 4½ per cent. New York City bonds are to be sold through the agency of Messrs. Pierpont Morgan, and the market for all Yankee things closed weak. Russian bonds were firm, Kaffirs weak, and Mining things ragged.

THE WEEK'S PRICE MOVEMENTS.

Baku Russian Petroleum.—Production of crude oil for week ending Jan. 25, 227,300 poods, equals 3,659 tons.

Shawinigan Water and Power Company.—Earnings for December were $54,600, being at the rate of $655,200 per annum, compared with $30,844, or at the rate of $370,128 per annum a year ago.

Banks and Discount Companies.

Points from Chairmen's Speeches.

LLOYDS BANK.

Mr. J. Spencer Phillips, who presided, remarked that he thought that the criticisms of the American crisis had been singularly forbearing, for the whole of the business community and very many private persons, investors and others, had suffered more or less severely. But close as were our friendly relations with America, as well in business as politically and privately, it could not be gainsaid that the spectacle of a banking moratorium extending for months throughout the United States was a sad one. He did not wish to express any opinion upon the problem of Free Trade, but it was only fair to say that the policy so far as the open gold market was concerned had been a conspicuous success. The year ended with two millions more gold in the Bank of England than at the end of 1906, and this after sending over fifteen millions to America during the last two or three months. He said he strongly deprecated any question of a fixed reserve such as prevailed in America. In that country their inelastic currency and their inability to employ their resources in times of stress, which was the very object for which reserves were kept, had contributed in no small degree to aggravate the recent crisis, which, though not so acute now, could not be said to be entirely over. They had experienced the highest Bank rate since 1873; the average for the year had been £4 18s. 6d., the highest since 1866. Dear money did not invariably mean exceptionally profitable times for bankers. It crippled trade, it entailed more than usual care and caution, and it required them to keep their resources more than ever under control. He referred to the question of the great depreciation of securities, and said he did not think he should be exceeding the limit of prudence in saying that it looked as if bottom had at last been reached, and that all bonâ fide securities must have a tendency to reach a more natural level.

LONDON JOINT STOCK BANK.

Mr. W. Fleming Blaine, who presided, referred to the extraordinary American crisis, started undoubtedly by the grave insurance scandals, fostered by reckless speculation carried to the extreme, and brought to a point by a praiseworthy, if somewhat crude, effort to force public morality. During all this trouble London remained calm, looking on with sympathy and naturally with concern. We could not fail to realise what a serious effect it would have on trade all over the world, nor could we lose sight of the fact that we have vast investments in the United States. He believed they were estimated at over £450,000,000; yet, in spite of this, there was a complete absence of panic on this side; there was not even a sympathetic dislocation of trade generally. We were calm because we knew we could justly regard our own financial situation with confidence and satisfaction. London had been accused of parsimony in this great crisis, and very unjustly so. Where really legitimate business was offered to us, such as lifting crops and bringing them to market, or anything of that sort, London credit and London money were at the disposal of our friends across the water, but when we were asked to find a gold cure for speculative intemperance we said "No," firmly, and, he thought, very properly. We were specially bound to protect our reserves. From the necessity there was for huge importations of food stuffs and the present price of wheat, the bullion of hungry Britain was an irresistible temptation to every country which could supply us and wanted to replenish her Treasury. The lesson brought home to us by the whole of this trouble was that the expansion of trade and industry all over the world had been out of all proportion to the increase in the gold reserves. The consequence was that coin, like a stage army, had to do double duty, appearing successively at each centre of activity as it arose.

LONDON AND PROVINCIAL BANK.

Sir Joseph Savory said the world's trade in 1907 had never been equalled, and they stood in amazement at the total figures. The world had never been so prosperous or production so great. Great Britain had obtained her full share of this prosperity. Not only did we import more produce than in any previous twelve months, but the exports of our own produce were so great that by means of them we sent abroad capital to the extent of no less than 80 millions, from which we should receive an income in future of no less than four millions a year. The greater part of the capital sent abroad in the past year had been devoted to railway construction in India, Canada, Argentina, and the United States. During the late war only a few millions were sent abroad. Last year the value of our foreign trade was £726,000,000, an expansion of 47 per cent. in four years. The volume of trade reached, for the first time, in 1906 1,000 millions sterling, but this increased last year to £1,164,000,000. Dealing with the home trade, he said that agriculture in 1907 passed through one of the most prosperous years in recent times, and the prospects of further improvement were good. Farmers of all classes, with one notable exception—the hop-growers—had reason to look back upon the year with unwonted satisfaction. In the coal trade of South Wales high prices and high wages had been the rule. As to the tin-plate trade, although the horizon at the moment was somewhat clouded, the year just closed was the most prosperous on record.

LONDON AND WESTMINSTER BANK.

The Chairman (Mr. V. W. Yorke, and the past half-year has been a very difficult time for the business of the country. Came at the start, the six months had been one [illegible] storms and depressions, which had come sweeping across the Atlantic to spend their fury on our shores. He thought he might say that we had come through the ordeal remarkably well. We had taken shelter behind a high—a very high—Bank rate, and that shelter had proved sufficient. We had to [illegible] and put up with a great amount of inconvenience, but the soundness of our financial institutions had been [illegible] possibly as never before. There had hardly been a [illegible] of importance throughout the country during the half-year, and our system of credit had proved elastic enough to stand the very severe strains put upon it. In spite, therefore, of the troubled times through which we had passed, it was [illegible] for anyone with any patriotic instincts to look back on the half-year with feelings other than those of pride and satisfaction. The Bank rate for the half-year, which showed the very high average of £5 3s. 5d. (the highest average shown in any half-year since 1866—the year of the Overend-Gurney trouble), had been in their favour, but the rates of money lent on the Stock Exchange and for day-to-day loans had been slightly less than in the preceding half-year, and they had had rather dear money to deal with. Dealing with the depreciation of securities, Mr. Yorke remarked that at the last meeting the proprietors approved of their having transferred £100,000 to a Government securities depreciation account and to their writing £10,000 off investments other than Government securities. The position in which they found themselves at December 31 differed very slightly from that in which they were at June 29, and the directors had not thought it necessary to make further drafts on their reserves or profits to provide for depreciation. At any rate, the value they set upon their securities was well below their market value on December 31 last. Since their balance was struck the prices of the securities which they held had risen appreciably, and though he had no wish to join the ranks of the prophets, there seemed to be a fair chance of a further improvement in the near future. The profit they had earned, added to the carry-forward from the last accounts, left them with a substantial figure to deal with, and they had thought it wise, after paying the same dividend as last year—viz., 13 per cent—to apply £10,000 to their pension fund. It was their present custom to pay out of revenue the whole of the pensions required during any half-year; but in addition to this, a capital sum had to be provided against their total liabilities under this head. After making this appropriation they had some £47,000 still left to carry forward to the next accounts. This amount was higher than some amounts that they had carried forward of recent years; but it should be remembered that periods of high rates for money, such as they had been passing through, were often succeeded by periods of low rates, and that if a time of cheap money were in sight it was only prudent that they should enter upon it with substantial profits in hand. Further, he would say that the question of the depreciation of securities was still with them, and that it was essential for them to maintain an attitude of caution until a recovery in prices had been established.

NATIONAL PROVINCIAL BANK OF ENGLAND

Mr. Robert Wigram, who presided, said that the business showed a continued and healthy growth, both at the head office and in the country. He proceeded to refer to the financial business of the country, and pointed out that the Bank rate had changed seven times during the year. The report showed that the National Provincial Bank held in cash, Consols and other gilt-edged securities £26,269,000. Supposing any extraordinary crisis should arise, causing a demand for its deposits, some 48 per cent. of these deposits could be repaid without calling for a penny on those customers to whom they advanced in the way of business. In times like the present the prudent banker had taken steps to strengthen this reserve by holding a greater portion of it in gold, or in bank-notes convertible into gold. Referring to the financial collapse which had taken place in the United States, he remarked that an able writer had recently illustrated the difference between the banking establishments of London and New York by means of pyramids, the base constructed of solid gold, on which towered the superstructure of credit, and he showed that the reserve gold base of the National banks, State banks, investment companies, and private banks of the United States amounted to only [illegible] per cent. of the superstructure of credit. In other words 3,047 millions sterling of credit was carried by 192 millions sterling of gold. The Bank of England reserve was in December last £[illegible] 53 millions sterling, a ratio of [illegible] per cent. against the 6.3 per cent. of the United States.

NATIONAL BANK.

Mr. H. F. Slattery observed that, although the [illegible] Stock Exchange business, in which [illegible], and, no doubt, in London a 7 per cent. rate, running [illegible] months, considerably helped their profits; but it [illegible] their transactions were mostly connected with agriculture and with trade of a general character, the prosperity of such an abnormal rate there was attended with considerable difficulty, involving a heavy tax upon the [illegible] question, with the result that their position [illegible] means so satisfactory as in those half-years when a moderate discount rate prevailed. On the other hand, however, their deposits enjoyed the benefit of the high rate of interest that was paid for money left with the bank. Reviewing the

agricultural year in Ireland, he gave a chequered picture, but the season was not all bad. The returns, which they had received showed that oats varied greatly in different localities; but on the whole, whilst the straw was fairly good, the grain was soft and small, and the crop was considerably under the average of good years. Of late years wheat and barley had not been much grown in Ireland. So much, however, of these cereals as was raised was fairly good, although varying in quantity and quality in different districts. There was a good average crop of turnips and mangels. Where potatoes were grown in dry and sandy land, and properly sprayed, the crop was a fair one, but where planted in low-lying and soft ground they turned out small in size, and of rather inferior quality. Then, again, he heard of some unfortunate districts in which, although there might not be an absolute dearth, there would certainly be a considerable scarcity of potatoes. He learned that all through the season there was a steady and good demand for cattle generally, and that store and fat cattle sold especially well. In the case of dairy farming, the output from butter-making was rather below the high yield of 1906, and prices in some measure fell. Creameries had done well, and Irish butter was steadily making its way in the London market, where it was again competing closely with that produced in Denmark.

PARR'S BANK.

Mr. Cecil F. Parr (the chairman) remarked that he might be unduly optimistic, but he confessed he did not anticipate, as many did, that depression in trade for the immediate future. It was overtrading and overproduction which caused the depression, and at present he saw very few signs of that. A year ago the demand outstripped the supply, with the inevitable result of a general rise in prices, including those of wages and raw material. That in its turn brought about a slackening of demand, which was still further accentuated by the increasing stringency of the Money market; so that, although there was at present a decided set-back in trade, it was not a depression. He would rather say that we were marking time until the stringency had passed and prices had adjusted themselves at lower levels. The world's requirements were still unsatisfied, and, in spite of the large loss of capital consequent on the late war and of the very large unproductive capital which was still being expended on future war, the world was richer now than it was before, and was ready and anxious to have its wants satisfied. In America, Canada, Mexico, and Argentina there were not only railway companies, but many industrial concerns, that were asking already, or were preparing to ask, for more capital wherewith to extend their mileage, or their plant, as soon as they could obtain that capital on cheaper terms, and it was reasonable to suppose that they saw a profit in those extensions. Although there were many black spots, and, perhaps, many black sheep, in America, it was not really the sink of financial and industrial iniquity that it was sometimes depicted in this country. There were just as many honest men and sound concerns there as here. It had been computed on high authority that the paramount produce—cotton, corn, and all other crops—of America was on an average worth £1,000,000,000 a year. If they had several good years in succession, when they had such figures as those, even the loss which they heard a great deal of lately really seemed insignificant. Again, in the crisis of 1903 over 160 National banks closed their doors, and over 50 of those never opened them again. During the present crisis only 16 banks had suspended, and of those most were preparing to resume business, some having actually done so already. Of course, it might easily happen that New York might again this year take more gold from us. America, it must be remembered, exported to us over £125,000,000 a year and took back only £25,000,000, leaving a large balance, which gave America both the right and power to take gold from us if she liked.

PROVINCIAL BANK OF IRELAND.

Speaking of the condition of Ireland, Mr. Percival Bosanquet said:—The seed time for corn was extremely bad, although the latter part of the year turned out better. The harvesting had been difficult, but in the end it turned out fairly satisfactory, prices having risen, which helped the agriculturist out of the Slough of Despond. Green crops had been tolerably good and potatoes the same, and with regard to hay there had been a tremendous crop, but it was cut and carried with great difficulty. Live stock had sold extremely well, and left very good profits indeed to the graziers, and, altogether, he was glad to state that the methods of agriculture had very much improved. If they went further North, to Belfast, the reports they had received were extremely good, prices for linen having been high; but the difficulties on the other side of the Atlantic gave rather a pause in the demand for Irish linen, which was about the best in the world. The satisfactory feature was that Ireland was beginning again to grow its own flax, and there was an increase of 4,000 acres under flax last year. It was not quite so well harvested as it might have been, but it was satisfactory that they were growing their flax again, and were not entirely dependent on Russia. From Belfast, too, came the news of the magnificent steamer of 18,000 tons, the *Asturias*, being built by shipbuilders there, which had now been put on the Royal Mail route to Australia, and from that same place they had received an account also of the *Suevic*.

UNION OF LONDON AND SMITHS BANK.

Sir Felix Schuster, who presided, had much to say to the point on the immediate past and on the broader outlook. We can note but a point or two here:—If, owing to the high rates for money prevailing, business had at times been carried on under some difficulty, yet the most striking feature of a retrospect must be a feeling of satisfaction, and perhaps justifiable pride, that on the whole, in spite of what was happening elsewhere, credit here remained undisturbed. Failures were few, and even Stock Exchange losses—large as they must have been—did not produce any of those disasters which occurred in other places; there was no panic; money, though high in price, was really never wanting for legitimate enterprise and trade; and the commerce of the nation, although put to some severe tests, showed that it was based upon solid foundations. They were apt at the present moment to look upon the American crisis as the most important event of the year. That might be true in a certain sense; but to his mind the constantly growing expansion of our trade, in spite of adverse circumstances, was more important still. To it was, in a great measure, due the better employment for money, leading to high rates and to the diversion of certain funds into commerce which would otherwise have been employed in investment securities. When it was remembered that our imports increased in the year by £38,000,000, or 6 per cent. over the already unprecedentedly large figures of 1906; that our total exports increased by £57,500,000, or 12½ per cent.; that our total foreign trade amounted to £1,164,000,000, it could be readily understood how vast must have been the amount of capital employed. It was only during the last three months of the year that rates were exceptionally high, and to bankers these high rates did not produce such increased earnings as at first sight one might be led to expect; in fact, when rates had to be raised, as they were during the closing months of the year—as a measure of precaution and protection for the gold reserves of the country—market rates for short money did not always correspond to the official discount rate, uneasiness with regard to the future often causing a certain amount of money to be kept unemployed. Thus they had had the phenomenon of the rate of discount in the open market being sometimes above that of the Bank of England, while short money was difficult to lend, and with an average Bank rate for the six months of £5 3s., or about 11s. per cent. higher than in the corresponding period last year, the market rate for three months' bills was only about 6s. per cent. higher. The average deposit rate was £3 4s., or about 6s. per cent. more than a year ago, whereas the rate for day-to-day money was only £3 3s. per cent., or 7s. per cent. less than a year ago; thus, while they had to pay more for their deposits, they actually received a lower rate for short money than in the corresponding period of 1906. High rates also led to a decreased turnover, to the reduction of customers' balances, and the transference of funds to deposit account and employment outside the banks; so that, altogether, they did not look upon these rates as very desirable, and the idea that while trade suffered from excessively high rates bankers gained was entirely erroneous. Their interests were not, and could not be, divergent; and bankers could only prosper when trade was prosperous. Bankers certainly suffered from excessively low rates; but he maintained that such rates were also detrimental to commerce, for credit obtained too cheaply had often, if not invariably, led to over-trading and disaster. It was only towards the end of the year that high rates began to prevail. In September, with a 4½ per cent. Bank rate, money was often worth no more than 1½ per cent., and only on October 31, when the large gold exports to the United States had commenced, was the Bank rate raised to 5½ per cent., that movement being followed by further advances to 6 per cent. on November 4 and to 7 per cent. on the 7th, at which rate it remained to the end of the year. In the month of November nearly £14,000,000 in gold was exported to the United States, and in December £3,500,000 (during the whole of the year 1907 such exports to that country amounted to £18,350,000, compared with £14,000,000 in 1906), and it was not surprising that exports on such a scale led to a rapid raising of the Bank rate, which action, supported by the outside market, had the usual and desired effect of bringing gold to this centre from various countries, Germany sending in November £4,600,000 and in December £2,300,000, and France in the two months about £3,500,000. The year's figures of the movements of gold were on an exceptionally large scale, and showed total exports of £50,800,000, and imports of £57,000,000, of which British South Africa contributed no less than £29,500,000; so that, in spite of large exports, a balance of upwards of £6,000,000 was retained here. Referring to the crisis in the United States, which led to this great disturbance in Europe, Sir Felix said no fewer than 32 different causes had been assigned for it in one newspaper alone, all of them more or less cogent. The history of that panic deserved to be written and studied with care, for many lessons were to be drawn from it. Much had been said about the inefficiency and inelasticity of the American banking system, and no doubt there was ground for these allegations and room for improvement; but he believed that, however sound and efficient the banking system of the United States had been, the crisis could not have been averted, even if it might have been mitigated. Unscrupulous methods of finance, abuse of vast powers of capital, over-trading, and over-speculation, could only have one result, and the sooner that result was reached the better it was for the community. But apart from such considerations, it must be borne in mind that over-confidence, following on a period of great prosperity, had led to the creation of a great number of new securities, amounting in three years to no less an aggregate than £1,000,000,000 sterling, and it was evident that even so wealthy and prosperous a community as the United States was not equal to their rapid absorption. Europe took a certain amount up to a point; but when European

support failed, and when the methods of certain trust companies which were really doing banking business were exposed, confidence was shaken, hoarding began, and the whole monetary system was disturbed, and did not return to normal conditions until the beginning of the present year.

WILLIAMS DEACON'S BANK.

Colonel Sir Clement M. Royds, C.B., the chairman, said: While the results of their own business had fulfilled their expectations, those results were due, in the main, to the prosperity which favoured the leading industries of Lancashire during the past year. They could hardly expect, in the ordinary course of events, that their profits would be so good in the current year. The past was the third year of good trade in the cotton industry. The county had enjoyed unprecedented prosperity, and the stimulus of that prosperity spread into the textile machinery trade, causing a demand for the erection of new mills, which had brought profit to the building trade and also to the machinery makers. There had been a continuous increase in the value of the shipments of cotton yarns and piece goods during the past three years and a steady increase in the exports of textile machinery. Thus in the year 1905 the shipments of textile machinery amounted to £5,600,000, next year to £6,700,000, and last year to £8,000,000. But though trade still appeared to be good, the "boom" was decidedly on the wane. Colonel Royds also gave a short statement of the cheque clearings at the various provincial centres, showing that last year the clearings at Bristol amounted to about £31,300,000 an increase on the year of about £315,000. At Newcastle-on-Tyne the clearings were £58,400,000, an increase of £3,600,000. At Birmingham the clearings were £61,500,000, an increase of £2,800,000. At Liverpool the clearings were £196,326,000, an increase of £7,587,000, while at Manchester the clearings were £320,926,000, an increase of no less than £26,680,000. In the past year the cheque clearings in the country, apart from London, showed an increase of 8·17 per cent.

NATIONAL DISCOUNT.

Mr. Edmund T. Doxat, the chairman, remarked upon the calm manner in which all these financial and commercial troubles abroad had been taken in this country, and the remarkable way in which credits had been maintained, in spite of the enormous shrinkage in the value of Stock Exchange securities and many leading articles of produce, which reflected the utmost credit on the way in which British financial, manufacturing, and commercial undertakings were conducted. As far back as the autumn of 1906 it was evident that the extension of railways and other industrial undertakings in the United States of America were being pushed far too rapidly to enable them to be financed without the aid of large sums of foreign capital, whilst the phenomenal rise in the value of most of the leading commodities, especially metals, also tended to absorb capital all over the world.

UNION DISCOUNT.

Mr. A. J. Fraser, in presiding, remarked that, in spite of high Bank rates, the actual average charge for Stock Exchange loans was only was only £4 11s. per cent., as compared with £4 18s. 4d. per cent. in the final six months of 1906. On the other hand, the ordinary loan and discount operations of the company had given considerable profits by reason of the deposit rate remaining at only 5 per cent. when the Bank rate was 7 per cent. As regarded the breakdown in American credit, the decline for the twelve months on 17 representative American stocks alone was £155,000,000, or about 32 per cent. Consols had established a fresh low record during the year, and the department for British and Indian funds showed a nett decline at the end of the year of nearly £32,000,000, or about 4 per cent., but both Consols and other gilt-edged investments had been depressed for a long time past in consequence of the new issues following the South African war, the excessive Colonial Government and municipal borrowings, and the general scarcity of money caused by the extraordinary expansion of trade all over the world. But now that colonial and municipal government borrowings were checked by the discrimination shown in investing circles by lenders, and trade prospects everywhere had had a set-back, it was probable that we should have easier money rates, and consequently a general appreciation of high-class securities. Moreover, the absorption of gold by America, which during the last two years had averaged about half of the world's production—namely, £40,000,000 out of £80,000,000 per annum—was certain to be materially lessened, and this must lead to a revival of our Stock markets. With reference to the crisis on the other side of the Atlantic, the inelasticity of the American banking system was usually urged as the prominent contributory factor. No doubt this had had its baneful influence, but there was another aspect of the American banking position which made it especially vulnerable in times of stress and storm. Nothing, of course, was impossible in this world, but in a very real sense one might say that banking of this kind that had been prevalent in the States was not likely to occur here. Our great joint-stock banks had a share capital carrying a big uncalled liability, and in many cases this could only be called upon in case of liquidation. The knowledge that thousands of wealthy people, holders of bank shares, could be called upon in case of liquidation to meet the heavy liability on these shares was a wonderful bulwark to our financial position. American banks have no such splendid reserve; their capitals were comparatively small and, more significant still, all was paid up. Without the safeguard arising from immense sums representing unpaid liability they were exposed to all the four winds of heaven.

Our [illegible] had [illegible] the strength [illegible] happy [illegible] water had been put. [illegible] half-year the course of [illegible] deal-wards, and all business [illegible] dition of monetary [illegible] United States was as [illegible] Happily, the wreckage on the other side of the Atlantic had been practically the only [illegible] this side; in fact, the Board of Trade Returns for 1907 showed an increase [illegible] ceding year, and the remarkable [illegible] this year the growth [illegible] The returns of the London Bankers' Clearing House showed a slight increase, but not in proportion to the normal growth of that institution, the reduction in the growth being far more than accounted for by the falling off on the Stock Exchange settling days, and whilst the [illegible] made at a somewhat [illegible] £81,000,000, the [illegible] £62,000,000. Still, with all these [illegible] the directors were able to [illegible] the same dividend as that declared for [illegible] per cent. per annum, with an addition of £15,000 to the reserve fund, and with a balance carried forward to the next half-year of £5,623 more than they started with.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

LANCASHIRE AND YORKSHIRE RAILWAY.

In the last six months of 1907 this company's gross earnings amounted to £3,161,030 and the working expenses, including rates and taxes, came to £1,911,726. Receipts thus showed an increase of £108,936 on the corresponding half of 1906, but, unfortunately, working expenses rose by £101,959, so that less than £7,000 of the gross increase remained as nett, and the ratio of working expenses to receipts has now crept up to nearly 60½ per cent., as against barely 59 per cent. twelve months back. Preferential charges have also risen by £14,135, but still the directors are able to distribute a dividend for the half-year at the same rate of 4¾ per cent. per annum as was paid at the like date last year, and £32,546 will be left to carry forward or an increase of about £237. Amongst the items of working expenditure which show the greatest changes locomotive power naturally stands prominent, the increase there being £60,998. Next come traffic expenses with an increase of £37,348, but maintenance of way is down nearly £500, and the increased charge for carriage and wagon repairs is only £2,225, and while law charges have risen by £2,019, Parliamentary expenses are down £1,058. Fully £10,000 more, however, has been paid in compensation, which has been heavier under all heads, but especially under goods, and the only important saving has been in rates and taxes, the charge imposed by which is down £9,535. Owing to the heavier preferential charges the amount available for dividend is, at £958,842, only £2,638 larger than at the same date last year, but it now takes rather more than it did then to pay the same dividend upon the consolidated stock. Loss continues to be incurred by the working of the Fleetwood steamer service to Belfast and Londonderry belonging to this company and the London and South-Western, and for the past half-year £6,129 was deducted from the gross receipts on this account, but no details are given regarding the business. Capital expenditure during the six months amounted nominally to the fairly heavy sum of £552,024, of which no less than £113,563 went in payment for new rolling stock, bringing the total cost of this stock to the company, all charged to capital account, up to £8,137,595. Expenditure on lines open for traffic and workshops and docks was £172,165 in the past half-year, and in addition £42,000 was subscribed to other undertakings, but the total outlay was swollen to the figure named by £192,589 of the company's 3 per cent. debenture stock exchanged for West Lancashire Railway second debenture stock, so that it was not all hard cash that disappeared. In the current half-year the estimated capital expenditure is put at only £344,055, but of this £90,317 is for new working stock, and of the balance £115,000 will be spent in providing additional [illegible] accommodation. At the present time the capital [illegible] the company is overdrawn by £1,765,165, and as the total of the various superannuation, pension, provident, guarantee, insurance, rolling stock and steamers' renewal and insurance funds, &c., is less than £1,000,000, it follows that the present capital expenditure must be [illegible] the ordinary trading balances. Shareholders therefore must look for an early emission of further stock. The dividend is payable on the 6th inst.

LONDON AND SOUTH-WESTERN RAILWAY.

In the December half-year this company's gross earnings amounted to £2,919,484 and working expenses came to £1,762,270. These are the total figures, and the working charges on the railway system alone amount to 58·87 per cent. of the receipts as compared with 57.04 per cent. in the second half of 1906. Excluding docks and steamboats, the railway revenue reached a total of £2,678,197, being an increase of £47,503 on the corresponding half-year, but maintenance expenses, again excluding docks and steamboats, came to £776,849

more at £1,542,846. Southampton Docks gave an income of £152,602, which was £20,760 more, and as the increase in expenses was only £6,615, the nett revenue from this source rose by £14,145. An increased profit was also shown by the steamboat business, receipts from which rose by £15,197 to £138,685, but expenses rose by £8,348, of which more than £6,000 was due to the higher price of coal, so that the increase in the nett income was only £6,849. Nevertheless, the nett revenue from the steamboats appears to amount to nearly 5 per cent. upon the capital sunk, whereas the nett income of the docks is not yet equal to 1½ per cent. of the capital cost. Doubtless, however, the railway gains much indirectly from this possession. One or two items in the railway expenditure show unpleasant growth, especially locomotive power and traffic expenses. Locomotive power alone cost £56,872 more in the past half-year compared with the second half of 1906, and of this increase nearly £35,000 must be ascribed to dearer coal and coke. Then traffic expenses went up by £14,213, and the exhibit would have been worse than it is had it not been for a decrease of £4,000 in rates and taxes and of over £500 in the charge for compensation. Very little addition, however, was made to the cost of maintenance of way, &c., which was up less than £2,000, and carriage and wagon repairs and renewals took less than £500 more. Changes in the nett revenue are interesting. Apparently the fixed charges are £36,555 down, but then nothing is charged against the Salisbury accident, or credited to the steamboats reserve this year, whereas a year ago these two accounts were credited with £45,000, of which we believe £15,000 went to the steamboats reserve. In reality, therefore, the fixed charges are up compared with a year ago, and one source of increase is the charge for bankers' and general interest, which comes to £3,147 against a credit on this account twelve months back amounting to £1,363. Therefore interest charges are raised by £4,510 in this one direction. But against that there is a decline of £12,164 in the rent of leased lines, stations, &c., caused no doubt by transfers of properties like the Waterloo and City and the Axminster and Lyme Regis lines to the South-Western Company itself. Interest on debenture stock shows, on the other hand, an increase of £1,100. When all items are adjusted the amount available for dividend on the guaranteed, preference and ordinary stocks is £31,020 up on the year at £914,830. Of this increase, however, £8,763 is swept away by the larger charge now involved by the 3½ per cent. preference stock. Still the directors are able to increase the dividend by half-a-crown to 7¾ per cent. per annum as against 7½ per cent. This gives 3¾ per cent. to the deferred stock for the year. Capital expenditure was moderate last half-year at £168,192, of which £37,175 was sunk in Southampton Docks and £37,098 in new working stock. In the current half-year the working stock is expected to absorb £52,000 and Southampton Docks £58,000, and as £140,000 is to be laid out upon the improvement of the company's existing lines, while subscriptions to other railways are reckoned to take away £8,000 the capital expenditure for the current half-year will be raised to £258,000. This, however, need not involve any fresh issue of capital so long as the habit prevails of utilising all trust funds and savings bank moneys in the business, for although the capital account is now overdrawn by £923,338 this is still nearly £300,000 short of the aggregate value of the reserve funds, superannuation funds, savings bank deposits, steamboat insurance, depreciation and renewal funds, fire insurance fund, &c., the total of which is about £1,220,000. Dividends are payable on the 15th inst.

THE SOUTH-EASTERN RAILWAY.

Out of its share of the joint nett receipts the board of this terribly muddled common carrier's business proposes to give 4 per cent. to the undivided ordinary stock, leaving £8,489 to be carried forward compared with £7,072 brought in. This gives the preferred ordinary 4 per cent. also, which, added to the 1 per cent. paid six months ago, brings the return for the twelve months on this stock up to 5 per cent. As it is entitled to 6 per cent. before the deferred touches a shilling, holders of that stock are out in the cold for 1907, in spite of the solicitous fomentation of the stiff joints of the structure with capital. It is on such a small scale, though, nowadays, a mere £79,107 nett for the past six months, including the company's share in the joint capital expenditure mentioned above. The balance at debit of capital also is only £207,685, but the board has invested £470,000 of the £964,000 of savings bank and other trust funds held by it in the company's own 3 per cent. debenture stock at par, and has £152,870 more placed in other securities unspecified. Presumably the whole of this money has gone in aid of the capital expenditure, and there must now be a considerable book deficiency in the trust accounts.

LONDON, CHATHAM AND DOVER RAILWAY.

This company gets £14,150 less as its share of the joint nett revenue than it did a year ago at £366,872. In addition, however, it credits itself with £33,236 nett rents from property and £267 from transfer fees, so that the entire revenue is £400,375 against £416,130 a year ago, and there was a balance of £4,327 brought forward from June, besides which the managing committee handed over £2,132, representing interest on the value of stores and petty cash balances, together with £3,364 to meet interest on capital expenditure. General charges took £5,944, including £1,750 for directors' fees over and above the £2,000 or £4,000 per annum paid to those directors who are members of the managing committee out of the joint accounts. Altogether the boards of this company and the South-Eastern would appear to receive something like £10,000 per annum for managing the business. Out of the balance of £161,438 left after meeting interest charges and rentals, of which there is a long array, the directors are able to pay a full dividend at the rate of 4½ per cent. per annum on the arbitration preference stock, leaving £10,072 to be carried forward or £7,154 less than a year ago. Some of the charges show considerable increases, that on the 3½ per cent. debenture stocks, for instance, being nearly £6,000 higher at £10,278, but there was a reduction of £948 in the rent paid to the East London Railway proprietors, and interest on Lloyds bonds fell off £331. The company's own capital expenditure was swelled out last half-year by £20,981, representing a discount on an issue of 3½ per cent. debenture stock, but besides that it appears to have spent £22,790 on its own account over and above £56,653 received from the managing committee of the two systems. So altogether £100,425 was added to capital in the six months. The capital account is now overdrawn by £748,350, and the company still owes £162,823 on Lloyds bonds, besides £272,455 to the South-Eastern Company. The total capital laid out upon docks, steamboats, and other special items has not been increased, and remains at £91,965, but the company's debt to the managing committee rises steadily and now figures at £1,240,447.

CENTRAL LONDON RAILWAY.

Compared with its highest total, that for the second half of 1902, this company carried 8,397,619 fewer passengers last half-year, and the numbers showed a decline of 6,150,506 on the total for December half of 1906. No wonder, then, that the receipts are less by £18,508, or that in spite of a saving of £5,152 in expenses and of £168 in taxes, the nett income is less by £13,955 than the year before at £59,621. This is brought up to £91,922 by the balance of £25,891 brought forward and the amount, £5,532, reserved six months ago to meet the dividend on the deferred stock, together with £878 received as interest, and after meeting debenture interest and paying for some small repairs and additions, as well as providing £1,304 as interest on the reserve fund, the balance of £70,750 left is sufficient to give the ordinary stock a dividend at the rate of 3 per cent. per annum, the preferred getting 2 per cent. for the half-year and the deferred 2 per cent. for the whole year. A balance of £20,218 will still be left to carry forward or £5,673 less than was brought in from the June half-year and £12,000 less than the balance added to profits twelve months ago. But things are going to be better, the directors hint. A larger interchange of business is being done with the other tube railways, and good results appear to be expected from the provisional agreement about fares made with the omnibus companies, and which came into force on December 15 last. The company spent £19,482 on capital account last half-year, and is already in the fashion with an overdraft on capital account amounting to £91,450.

CITY AND SOUTH LONDON RAILWAY COMPANY.

Although the number of passengers carried exclusive of season ticket-holders showed an increase on the corresponding half-year of 1,627,852, and receipts including season tickets an increase of £11,224 at £83,452, while revenue from all sources improved by £12,018, nett revenue was only £6,377 better at £47,763. With £1,857 brought in the credit balance is £49,620 or £3,279 more, of which debenture service takes £12,394 or £1,135 more. Rent charge is a new item, and, whereas a year ago £3,074 was received for general interest, this time £1,381 had to be paid out under that head, and renewal fund again takes £1,500, so that the available balance is only £488 up at £34,070. To this result the abnormally high cost of coal and general stores contributed, locomotive generating power taking an increased sum of £2,460, of which £1,408 was on account of coal, and traffic expenses £3,046 more. These extra costs, however, provided an increased train mileage of 131,902 over a mileage worked of 7m. 26c., against 6m. 9c., on the Euston Extension. In appropriation the 1903 5 per cent. preference gets its full dividend for the first time, absorbing £3,750, so that the ordinary dividend has to be cut down by ¼ per cent. to 1¾ per cent. and £1,402 less is left to carry forward. Through bookings have been arranged between the company's line and the suburban stations on the Great Northern and Midland Railways, also with the Metropolitan and the Central London, Hampstead (and Highgate) and Piccadilly Tubes, in addition to the previously arranged through bookings with the Brighton Railway and the Baker Street and Waterloo and Great Northern and City Tubes. On capital account £31,680 has been received and £21,106 expended during the half-year, and the debit to that account is now £100,699.

BARRY RAILWAY.

Receipts for the December half-year came to £395,044, including £143,336 contributed by Barry Dock, and working expenses reached £234,332, leaving £160,712 as nett income against £170,342 for the second half of 1906. Gross income increased by £21,979 and expenses by £31,309. After meeting fixed charges, which were £1,838 less, and paying the three preference dividends, which took the same amount as before, enough remained to give the ordinary stock a dividend at the rate of 7¼ per cent. per annum as compared with a 9 per cent. rate a year ago, and £3,134 remains to be carried to the current half-year, or £330 more than a year back. This disappointing result is not so much due to dear coal as to greater cost of repairs, higher shipping and dock expenses, and to an entry, "steamship expenses, £10,434," not visible in the accounts of a year ago. Locomotive power cost £5,471 more, repairs £2,854 more, and shipping expenses and dock working charges together £8,286 more. There was even a small increase of £820 in rates and taxes, and law charges look shockingly heavy for such a

small company at £8,071, which is £5,186 up on the comparison of half-years. The capital outlay for the six months was £102,275, of which £80,170 is set down to "steamship service" and no less than £19,446 to "sundries." In the current half-year the board looks to lay out only £40,735, £10,000 of it on working stock, and the balance at the debit of capital account is already £95,803.

RHYMNEY RAILWAY.

Gross receipts rose £18,602 in the past half-year to £178,173, but expenses expanded £22,326, so that the nett revenue was really £3,723 down compared with that for the second half of 1906 at £59,467. A balance of £6,609 was brought forward, so that after meeting debenture and other interest and paying the rent charges, in all £12,184, a balance of £53,891 remained, out of which the preference stock dividend is paid, leaving enough to give the ordinary a dividend at the rate of 7 per cent. per annum, or the same as a year ago, with £6,030 left to carry forward. Maintenance charges increased by over £4,600 and locomotive power cost £13,752 more, and nowhere else was there much saved. Capital expenditure last half-year was £15,628, nearly the whole of it on new stock, and in the current six months is estimated at £58,000, including £18,000 for new working stock, and the capital account is already overdrawn £145,775. So the company owes £84,313 to its bankers.

MIDLAND GREAT WESTERN RAILWAY OF IRELAND COMPANY.

The International Exhibition at Dublin brought a considerable amount of traffic to this line in the half-year ended December 31, and passenger earnings consequently improved by £6,816, practically all in third-class, as the higher receipts from first-class were nearly counterbalanced by a decrease in second-class. Parcels, horses, &c., and mails also contributed to the improvement, making a gain in coaching traffic of £7,362 at £152,666, As merchandise, live stock, and minerals all yielded more, the gross revenue from the railway came to £318,898 or an increase of £14,900. Receipts from the Royal Canal tolls and dock dues fell off by £168 to £2,704, and rents were also less at £4,657, but this time a profit of £915 was realised on the Mallaranny and Recess Hotels, and with £85 from transfer fees the total income from all sources was £14,768 up at £327,260. Working expenses rose by £7,812 to £177,896, the principal movement being in locomotive power, which cost an extra £7,629 owing to a heavy advance in the coal bill. Costs of the Royal Canal, although £808 less than a year ago, still exceeded the receipts at £4,400, leaving the nett income at £144,964 compared with £137,201. Adding £5,891 or £1,201 more brought forward and £2,122 from interest and baronial guarantee, the available total was £9,379 larger at £152,977, and after meeting the fixed charges £1,000 was paid out on account of exhibition guarantee, leaving £92,929 or an increase of £8,284. Preference dividend having been paid, the consolidated stock receives a dividend at the rate of 3½ per cent. per annum compared with 3 per cent. a year ago, and instead of £3,444 put to reserve the directors this time transfer £2,000 to that fund and £2,000 to permanent way renewal fund, and increase the sum carried out by £1,762 to £19,106. Capital expenditure in the six months amounted to £14,297, of which £9,484 was for new cattle wagons, and the debit balance has now risen to £29,829.

EAST LONDON RAILWAY.

No steps have yet been taken by the lessee companies towards electrification of this line, and until that change has been made the half-yearly reports must continue to be a chronicle of very small beer. Gross earnings for the six months ended October 31, in accordance with the Clearing House settlements, amounted to £22,698 or a decrease of £2,433. Of this reduction no less than £2,023 was in coaching traffic, and is ascribed to the withdrawal of the Metropolitan Company's through train service between Hammersmith and New Cross, as local bookings were larger. The minimum rent paid by the lessee companies for the half-year to December 31 was £14,250, but miscellaneous receipts increased by £42 to £659, and as general and law charges were lighter the nett revenue amounted to £98 more at £13,987. With £10,562 brought in the disposable total was £24,549, of which interest on the 3½ per cent. first debenture stock and on the second charge 4 per cent. debenture stock, classes A and B, absorbed £14,577, leaving £9,972 to be carried forward against £9,920 a year ago.

LONDON AND COUNTY BANKING COMPANY.

In the December half-year this bank, one of our oldest and most powerful joint-stock banks, seems to have experienced no fluctuation of fortune whatever in consequence of the strained condition of the Money market. The nett profits came to £325,849 or just £843 more than in the corresponding half of 1906 and the directors were able to make the same allocations as they did then, viz., £50,000 to investments depreciation fund, raising it to £150,000, a sum sufficient to write down all the investments to below market value, £25,000 to premises account and £50,000 to the reserve, raising it to £1,600,000, all as before. This left £200,849 to which £100,597 brought forward had to be added, or £3,232 more than the carry forward taken in a year ago, so that altogether £301,446 remained for distribution, or £4,075 more. Accordingly the directors declared a 10 per cent. dividend for the half-year which takes £200,000 and makes the distribution for the year 20 per cent., the same as in 1906, and have still £101,446 left to carry forward, or £4,075 more than the amount remaining twelve months back. Liabilities on current, deposit and other accounts have increased by only £274,138 to £45,264,455, but compared with a year ago acceptances are £1,015,756 up at £4,638,448, and the amount allowed for rebate is £625 more at £43,731. Amongst the assets, cash in hand and at the Bank of England shows a diminution of £432,848 at £7,000,294, but loans at call and short notice have expanded by £268,163 to £3,500,780. Investments in Consols and War Loan stock at £6,804,491 are the same as before, but if we add in the Canada 4 per cent. bonds and Egyptian 3 per cents. held the total of this class of security comes out at £6,948,080, which is £6,350 down on the year. The bank also holds Indian securities to the amount of £848,161 together with £1,737,525 of Metropolitan and other Corporation stocks, debenture bonds, English railway debenture stocks and Colonial stocks, and possesses £36,895 of unclassified securities, so that altogether its investments now amount to £9,270,661, which is £53,541 more than at the end of 1906. Bills discounted, always a large item here, show an increase of £160,113 at £7,468,354, and advances to customers have risen by no less than £8,196,579 to £28,032,573, proof surely that the bank came loyally to the help of its customers in the difficult time through which they had to pass at the end of the year. Bank premises, notwithstanding the £25,000 written off, are £21,872 up at £826,319, and this item brings the total of the balance-sheet up to £53,998,081, which is £2,394,595 more than a year ago. The gross profit, it should be added, was £56,203 more at £986,903, but of this increase £51,331 additional went in payment of interest on customers' balances, this bank being one of the commendable few which set forth that particular item in their profit and loss accounts. Last half-year the amount so earned by depositors was £282,604. Current expenses rose by no more than £3,403 to £334,718. The report reminds shareholders that during the half-year the old-established business of Messrs. F. Burt and Co., foreign bankers, of 80, Cornhill, was absorbed, and that branches have been opened at Bournemouth and Folkestone. Accompanying the report are circulars dealing with proposed changes in the articles of association, in virtue of which, should they be accepted, as doubtless they will be, a general meeting of the bank will only be held once a year in future, at such time and place in the City of London as the directors may determine. Power is also taken to allow the board to set aside out of the profits of any year such sum as it thinks proper either to existing or any special or other reserve fund, such funds to be available to meet depreciation or for the equalisation of dividends or for other purposes beneficial to the bank. The directors are also to have the discretionary power to carry over any part of the profits of a year which they may not consider it desirable to distribute. Power is also to be given to the directors to declare dividends without waiting for the sanction of shareholders in general meeting, and another important change relates to the auditing. Under the existing articles of association, the auditors must be shareholders of the bank, but when the change proposed has been made the shareholders will obtain the power of electing professional accountants to serve them in this capacity.

MARTIN'S BANK.

In the December half-year the profits of this bank did not make a good display compared with those for the second half of 1906. The total, including a balance of £22,247 brought forward from the June half-year, was only £47,877, which was £6,727 down. It should, however, be remembered that in the corresponding half-year £3,192 more was brought forward, and also that the interest accrued and paid to customers was £2,639 less then than it was in the past half-year. These two sums together account for over £5,500 of the diminished total, so that the earnings of the half-year were not really so very depressing. The directors are still able to pay the usual dividend at the rate of 8 per cent. per annum, and to add £5,000 to the reserve against £10,000 a year ago, leaving £22,877 to be carried forward or £630 more than was brought in. Liabilities on current, deposit and other accounts show a decrease of £94,841 at £2,826,958, but the contingent liability on acceptances has risen by £192,859 to £544,286, and there is also a liability of a kind difficult to define not brought into the balance-sheet—viz., a contingent liability on English bills remitted to foreign bankers, the nett amount of which at the end of the year was £527,040. Of this £318,294 had run off by January 25. Also there is a contingent liability of £70,776 on "foreign bills endorsed," but this had been reduced to £23,611 by the same date Doubtless, however, other liabilities are being assumed to take the place of those cancelled. Cash in hand and at the Bank of England is up £64,828 to £749,588, but loans at call and short notice are down £148,628 to £441,610. A decrease of £4,500 has also taken place in the value of securities held, which now amounts to £348,360. Bills discounted are likewise less by £135,523 at £737,252, but loans shown an increase of £120,245 at £1,036,856. An increase of £12,100 is also shown in the item investments, including freehold premises yielding rent adjacent to head office in Lombard Street and Change Alley, the total of which is now £89,169, but the other premises belonging to the bank remain at £132,000, and the total of the balance-sheet is £4,079,122, compared with £3,967,830 a year ago.

COUTTS AND COMPANY.

From the balance-sheet issued by this important private bank for the information of its customers we learn that the current and deposit accounts on January 18 amounted to £8,003,325, which was £795,561 less than at the corresponding date of 1907. On the other side the largest movement is a decrease of £362,580 in investments, but bills discounted and loans are £143,715 lower at £4,381,718, cash balances have been reduced by £11,052 to £719,320, and money at call and short notice is £278,214 down at £1,306,443.

BRADFORD DISTRICT BANK, LIMITED.

After providing for bad and doubtful debts, writing down Consols to 80, and other investments to below market values, and applying a sum in further reduction of Commercial Bank

purchase account the nett profit for the six months ended December 31 is brought out at £32,873. This is an apparent increase of £5,149, but the balance-sheet does not show any great increase in resources to account for such an improvement, and we suppose, therefore, that the difference lies in the amounts written off. Adding £9,955 brought forward, the available total is £5,009 up at £42,828, out of which a dividend at the rate of 12½ per cent. is paid or the same as a year ago, but £5,000 more at £10,000 is put to reserve, and as nothing is written off bank premises compared with £1,482, the sum carried out is £1,491 larger at £11,328. In some respects the balance-sheet is a model of what a bank balance ought not to be, and shareholders should demand that the items on the credit side should be given in much greater detail. What information of any value, for instance, can be extracted from the statements that cash in hand and with Bank of England, agents and brokers at call, bills on hand and investments in Consols, &c., aggregated £1,480,034? Such as it is, the item shows an increase of £49,982, while advances are £26,642 up at £2,299,167, against which liabilities on current and deposit accounts come to £3,250,756 or £60,035 more. Acceptances, with their *per contra* entry, are £5,183 higher at £266,562, and bank premises are valued at £78,000. The reserve fund now stands at £230,000 against a paid-up capital of £344,000, and the aggregate of the balance-sheet is £4,124,631.

CARLISLE AND CUMBERLAND BANKING CO., LIMITED.

A reduction of £652 to £19,023 in the nett profits for the past year was offset by the larger amount of £3,517 brought forward, and the sum to be dealt with was consequently a few pounds better at £22,540 compared with £22,517. Notwithstanding this the directors deem it advisable not to repeat the bonus of 1 per cent. given for 1906, and after paying the regular dividend of 18 per cent. they add £1,023 to the balance carried out, raising it to £4,540. Deposit and current accounts are £21,837 higher at £958,312, and in addition the bank has a note circulation of £21,920. Against these cash in hand and money at call has been increased by £64,934 to £166,391, and investments, other than those specifically earmarked for the reserve, are £6,961 up at £109,470, but loans and advances show a decrease of £58,997 at £770,804. The reserve fund has been reduced by £10,000 to £75,000, with a corresponding drop in the securities representing it, but there is an increase of £9,146 to £47,106 in bank premises.

HIBERNIAN BANK, LIMITED.

Gross profits for the six months ended December 31, after providing £7,084 or £1,148 less for rebate on bills, were much the same as for the corresponding half of 1906 at £54,023. Expenses, however, took a little more, and with a smaller balance of £2,831 brought in the nett surplus was £348 down at £25,367. The usual dividend at the rate of 6 per cent. per annum having been paid, the directors put £5,000 to reserve against £7,000, but £1,000 of this reduction is used to write down bank premises, and after transferring another £1,000 to officers' superannuation fund the sum carried out is increased by £652 to £3,367. Last year £14,500 was taken from reserve to provide for depreciation of securities, and a further amount was appropriated six months ago, but these have apparently proved sufficient as the auditor certifies that the £25,000 suspense account brings the investments within their present market value. The reserve, therefore, stands at £130,000 against the paid-up capital of £500,000. Deposit and current accounts are £63,406 up at £3,344,810, but the increase is more than offset by a reduction of £82,891 to £164,867 in liabilities to sundry agents, and with various small changes in other items the total of the balance-sheet shows very little change at £4,218,697. On the credit side cash in hand is £8,298 smaller at £201,982, bills discounted come to £892,776 or £105,080 less, and balances due by sundry agents are £3,465 lower at £20,900, but advances have risen by £111,537 to £2,215,871 and investments are unaltered at £767,170. The directors make the somewhat unusual proposal that their remuneration should be reduced from £2,800 to £1,800 as from the 1st inst., and no doubt the shareholders will be quite ready to accept the offer.

ANGLO-AMERICAN TELEGRAPH COMPANY.

In the second half of last year the traffic receipts were £7,797 down at £202,434, but £181 more was received under interest and transfer fees at £1,358. Against this, however, £4,800 less came in from the chartering of the *Minia* at £8,000, but £4,448 more was brought forward at £24,143, so that altogether the income was £7,968 less at £235,935 and working expenses were £138 lower at £56,702, besides a decrease of £1,862 in the *Minia* expenses down to £8,978, but that is still £978 more than the receipts. General expenses, however, took £306 more at £2,776, and the result was that after allowing for pensions £3,400, same as before, and setting aside £20,000 to the renewal fund as against nothing last year, £24,918 less remained at £142,479. The total charges were further reduced by £1,356, which was the amount of the law costs incurred in the corresponding half-year in the suit against the Paris and New York Telegraph Company, no charge of the kind appearing in the past half-year's accounts. Owing to the reduction in the available balance the directors have been obliged to reduce the dividend on the ordinary stock to £3 10s. for the year, a decline of 7s. 6d. on the return for 1906. This gives the preferred stock its full 6 per cent., but leaves only £1 per cent. for the deferred against 35s. per cent. paid a year ago. The balance left to be carried forward is, however, £1,332 up at £2,479. The renewal fund has been debited with £90,000 as provision for depreciation, and this sum has been deducted from the cost of sundry securities and carried to depreciation account. Allowing for the £20,000 taken out of the revenue and added to this fund, there is a decrease of £72,012 in its total compared with a year ago. It is now £937,822, but it is taken into the balance-sheet at £887,751. Repairs to the 1874 and 1880 cables involved an outlay of £31,525, and the cost of the cable expended on general repairs came to £2,087, all provided from the fund. Interest received on the investments of the fund was £107 less at £15,430. As usual, a full list of these investments accompanies the balance-sheet, and indicates that the money has been most carefully distributed. The value of the cable in stock is £68,307, and the company has £50,097 in cash, besides £68,457 due to it against £56,575 owing by it to sundry creditors.

LONDON AND INDIA DOCKS COMPANY.

The tonnage of shipping entering this company's docks from foreign ports to discharge during the second half of 1907 fell off by 144,383 tons to 2,483,787 tons compared with a year ago, and vessels entering coastwise also showed a decrease of 37,794 tons at 314,213. In the first six months the total figures were 26,594 tons larger than in the corresponding period, so that the decrease for the whole year amounted to 155,583 tons at 5,725,218 tons. The weight of goods landed for warehousing and for immediate delivery to consignees in the six months was 27,343 tons up at 509,027 tons, but as there was a small falling off in the previous six months the total increase for the year was only 20,148 tons at 1,026,530 tons. Stocks of goods in warehouse on December 31 were 238,853 tons against 199,348 tons. Earnings from import rates on goods improved by no less than £24,389, and export rates were £1,701 up making the gain from this source £26,090 at £565,156. Rates for use of graving docks yielded £19,508 or £2,479 more, but rates and charges on shipping fell off by £4,328 to £298,497, and with small reductions in the other items the gross revenue was brought out at £914,008 or an improvement of £23,885. Of this £13,056 was swallowed up by heavier expenses at £592,974, the principal advances being £3,964 in wages, £4,029 in coal and coke, £4,114 in lighterage and £2,857 in land carriage of goods, while there was a saving of £3,708 in rates and taxes. Nett revenue was therefore £10,829 better at £321,034, and as £75,570 or £25,216 more was brought in the disposable balance, including interest on capital expenditure in connection with the Royal Albert Dock extension amounted to £398,076 compared with £362,065. Interest on the various debenture issues absorbed £124,549, and after providing for the dividends on the preference and preferred ordinary stocks, the deferred ordinary stock receives 3 per cent. for the year against 2¾ per cent. for 1906 and 1¾ per cent. for 1905, with a small increase of £318 to £3,608 in the sum carried forward.

ENGLISH VELVET AND CORD DYERS' ASSOCIATION, LIMITED.

Another good year was enjoyed by this trust during 1907, and the improvement of £12,843 in gross profits for 1906 has been followed by a further increase of £10,780 to £78,324. Interest and dividends and transfer fees yielded £350 more, bringing the revenue up to £80,600 against £69,470, and as head office expenses and the allowance for depreciation were only slightly higher, the gain in nett profits after meeting debenture interest was £10,502 at £47,641. A considerably larger balance of £23,820 was brought forward making the total available £71,461 compared with £51,819, and it is worthy of note that the directors have at last awakened to the fact that it is advisable to have a reserve fund. They have set aside £20,000 for this purpose, but even after doing so they are able to raise the dividend by 2 per cent. to 8 per cent. at the cost of a reduction of £5,160 to £17,660 in the sum carried out. Except for an addition of £13,363 to the cash balances at £65,209, the changes in the balance-sheet are unimportant, but it is pleasant as evidence of an improved position to find that the deposit of £40,000 debentures with the bankers as collateral security for possible loans is apparently no longer considered necessary. The provision for depreciation on the property just about covers the nett outlay on additions, so that this item is practically unchanged at £653,863. This item, of course, includes goodwill, which is understood to be valued at a pretty high figure, and for this reason it is to be hoped that the directors, having at last set their hands to it, will lose no opportunity of building up the reserve until it reaches a really substantial amount. A small decrease of £1,207 in sundry creditors is offset by an almost identical reduction to £35,821 in sundry debtors, but stocks and work in progress are also £1,130 lower at £23,425. Investments held by the association as well as those in the hands of the trustees for the debenture-holders are unaltered at £5,420 and £4,750 respectively.

LINEN THREAD CO., LIMITED.

A wonderful display is that made by this undertaking for the year ended September 30, when its nett profits amounted to no less than £303,486. This is an increase of £75,417 compared with the previous twelve months, and as the sum brought forward was £30,033 larger at £48,565, the disposable balance was £105,450 up at £352,051. Debenture interest and preference dividend together with an interim payment on the preferred ordinary shares took £115,249, and after paying a final dividend on the last-named, making 6 per cent. for the year, the ordinary shares receive a distribution at the same rate. Then £100,000 is transferred to reserve, which is £60,000 more than a year ago and £70,000 in excess of the amount required by the articles of association, and £43,237 is added to the balance carried out, raising it to £91,802, a step which the directors explain is taken to ensure the payment of interim dividends on all classes of shares, as well as to cover a half-year's interest upon the debenture stock. The paid-up capital was increased to £2,200,000 during the year by an issue of 15,033 shares, on which a premium of £20,315 was realised, and the debenture debt was at

the same time brought up to the round £1,000,000. On the other hand, additional businesses and shares acquired cost £126,453, and advances to subsidiary companies rose by £50,978 to £757,634, but the above-mentioned premium on shares has been written off, leaving the outlay at £3,656,328 compared with £3,499,212, against which the reserve now stands at £400,000. Liabilities to sundry creditors are £2,602 higher at £124,668, but loans and accrued interest have been reduced by £9,477 to £50,500. Stocks on hand are £22,872 up at £54,930 and debtors have risen by £26,674 to £147,946, while cash balances show a decrease of £12,331 at £88,511.

CITY OF LONDON BREWERY CO., LIMITED.

Contrary to their usual practice, the directors of this big company make no reference to the sales of beer during the past twelve months beyond stating that the London trade has been in a very depressed state. From this, we fear, it must be inferred that the shrinkage which was so pronounced in the four preceding years has not only continued, but has been on an even greater scale. This view would seem to be confirmed by the fact that the increase of about £2,000 in gross profits shown for 1906 has been followed by an improvement of no more than £420 at £125,796. Trade charges and repairs and maintenance of the brewery at the same time rose by £1,735 to £34,517, leaving the income £1,315 down at £91,279. Nett rents fell off by £1,981 to £28,446, and interest on loans produced £3,241 less at £12,659, showing that the tenants of public-houses have found it increasingly difficult to pay their way, yet, in spite of this, the directors have only written off £5,871 for bad debts compared with £9,035 a year ago. Including £1,474 from dividends and transfer fees the revenue from all sources was £6,554 smaller at £133,857, but in addition to the reduced provision for bad debts just mentioned, £3,203 less at £15,777 was spent on public-house repairs, and interest on loans and deposits was reduced by £1,554 to £3,487. The total saving in charges was £8,085 at £64,502, leaving a surplus of £69,292 or £1,531 more, but most of this was offset by the smaller sum of £2,640 brought forward, and the nett balance was consequently £1,270 down at £71,932. Of this the provision for depreciation of leaseholds takes £16,130 or £586 more, and after meeting the preference dividend the distribution on the ordinary stock and shares is cut down from 3 per cent. to 2¾, leaving £647 more at £3,287 to be carried forward. A year ago were steps taken to write down the assets out of the reserve fund, and the further charges now shown in the balance-sheet are not, perhaps, of great importance. It may be noted, however, that freehold and leasehold houses have been increased by £24,434 to £1,696,862, while the item of loans on mortgage, book debts, interest, and rents receivable is £53,874 down at £315,631. The brewery and plant has been written down by £8,840 to £466,031, but investments are unchanged at £50,000 and cash has risen by £13,616 to £24,822. On the other hand, deposits and interest show a further shrinkage of £14,826 at £75,493 and creditors have been reduced by £6,781 to £28,650. A small sum of £618 has been deducted from the reserve and freeholds and leaseholds suspense account for loss on realisation of houses taken for compensation leaving it at £106,670.

STROUD BREWERY COMPANY.

A small advance is exhibited in the figures of this company for the year ending November 17. Trading profit is £726 up at £19,778, and with an increase of £88 in interest and fees profit and loss account shows a gross credit of £20,175. Debenture interest takes £5,350 and directors' and other fees £968, so that £13,857 is carried to balance-sheet. With £915 brought in £14,772 is to be dealt with. Preference dividend wants £3,600; an interim at rate of 9 per cent. and final of 11 per cent., making 10 per cent. for the year, absorb £5,000. Reserve gets £2,000, as last year, and alterations and additions account £2,000 also or £1,000 more, and £257 more is carried forward. Last year the ordinary shares got a bonus of 2s. 6d. per share, but with the licensing legislation bogey before them the directors do not recommend one this year, and at the same time they wipe out goodwill. Brewery, &c., now is a real asset, being reduced by £30,000 for intangible goodwill and £1,252, balance of depreciation and additions for year to £227,448. Stock-in-trade is a little higher by £1,333 at £15,743. Cash comes down £3,150 to £4,507. Debtors on trade accounts and loans on security £10,439 owe £20,418 against creditors' claims against the company of £12,844. Reserves with this year's contribution, having paid off goodwill, will stand at £12,000, and may be considered well employed in secured loans to customers.

GOVERNMENT STOCK AND OTHER SECURITIES INVESTMENT CO., LIMITED.

This company's revenue from dividends, interest, &c., for the year ended December 31 was £67,320 and £5,046 was brought forward, making £72,366 in all. Interest on debenture stock and deposits took £24,295, directors' fees were £1,400 and £8,213 was provided for expenses and commission on the issue of second debenture stock made last year. Other items reduce the available balance to £35,754, which provides the preference dividend, and 5 per cent. or 1 per cent. more on the deferred stock, carrying forward the smaller sum of £3,692. During the year the directors have converted the £100,000 4½ per cent. perpetual debenture stock into £112,500 4 per cent. stock, increasing the amount to £451,470. The £12,500 required for the conversion has been obtained by taking £10,000 from the capital reserve fund and £2,500 made on sales. The issue of second debenture stock was for £200,000, and the directors believe that the company will derive material benefit from the money. The investments held have a book value of £1,348,142, which is above their market worth, but the extent of the depreciation is not mentioned. A list of the securities possessed is attached to the report.

SPIES PETROLEUM CO., LIMITED.

This company issues an interim statement covering the operations for the six months ended July 13 [illegible], and also gives reference to production for the whole of the past year. In the former period the gross production was 3,279,380 poods, a daily average of 18,633 poods as against 18,227 poods for the corresponding period, while the production during the second half of the year was 3,727,780 poods, being a daily average of 20,780 poods as against 19,159 poods for the second part of 1906. Thus the total production for the whole of 1907 was 7,[illegible] against 6,245,470 poods. Crude oil sold and [illegible] the six months to July 13 was 2,380,435 poods realising, [illegible] an average selling price of 20·989 copecks per pood, a slight drop compared with the corresponding period, but since the above date the average price has been somewhat higher. Gross profit returned is Rs. 250,623, of which Rs. 66,313 was spent in drilling and deepening on old plots, leaving Rs. 184,310, equal at the exchange of 9.45 to £19,504. Transfer fees and interest in London produced £524, but London expenses and income tax absorbed £3,279, so that the actual nett revenue was £16,749. Allowing £10,000 as proportion of depreciation on land, buildings, &c., the balance left is £6,749 to be added to £15,824, brought forward, making £22,573, not a very startling position.

FORE STREET WAREHOUSE CO., LIMITED.

This company has benefited materially from the general activity of trade during the past year, and shows nett profits, after all outgoings, of £15,708, which with £2,036 brought in gives a disposable total of £17,744, an improvement of £8,208 on last year's figures. Including the interim dividend of 2s. 9d. the total distribution is 8s. 3d. per share, absorbing £12,375, and the carry forward of £5,369 is £3,333 higher. The return on the capital involved is thus but ¾ per cent. higher than the yield on Consols. No further addition is made to reserve, which remains at £17,000 and is employed in the business, nor does depreciation ran to more than £[illegible] on £10,879 furniture and fittings; freehold and leasehold premises (the latter covered by insurance) still figure at £151,172, and stock is £12,207 higher at £157,878. Cash is a little better at £8,165 against £6,929. Amount due from customers has risen by £14,787 to £270,166, and bills receivable by £[illegible] to £12,606, aggregating £282,773, against trade debts £121,732, which are £26,127 more than last year. Sundry credits are £4,814 against the company over debts and payments in advance. Where no working account is shown, and all details of salaries, directors' fees and expenses, &c., are rigorously withheld, it is impossible to say if the meagre results are entirely due to bad management or not.

FOSTER, PORTER AND CO., LIMITED.

The high mark reached in 1900 was too good to last and nett profits for the twelve months ended December 31 showed a setback of £4,004 at £16,023, but £27,297 or £4,[illegible] more was brought forward, and the disposable balance was much about the same at £43,320. In view, however, of the decline in profits, the directors deem it advisable to cut down the dividend by 1s. to 15s. per share, which is still 2s. above the return for 1905, and to add £1,023 to the sum carried out raising it to £28,320. Business would appear to have shrunk all round with the company, as debtors on open account are £6,143 down at £25,810, bills receivable have been reduced by £1,054 and cash has dropped by £918 to £11,648. Cash debtors are slightly higher at £3,396, but stocks show a small reduction of £653 at £132,375, while, on the other hand, liabilities to sundry creditors and on bills payable are £5,028 less at £145,694, and the current position still seems favourable enough. The weak spot about the company appears to be that little or no provision is made for depreciation of property, a reduction of £206 being all that it is considered necessary to write off freeholds and leaseholds valued at £61,897, while fixtures and fittings have risen by £449 to £9,432. Beyond the sum carried out, which, from its size, may perhaps be regarded as a reserve, the only provision for the future is the buildings reserve account, and even that is £47 smaller than it was a year ago at £378.

HORACE CORY AND CO., LIMITED.

The directors of this company have discontinued their practice of giving a short account of the state of trade during the year, and merely express their regret that the result of the trading showed a decrease on that of the preceding twelve months. Gross profits, including £700 from interest and transfer fees, were £1,325 smaller at £12,[illegible]78, and after providing £525 for directors' fees and income-tax and £472 for depreciation, the nett balance was £1,226 down at £12,307. Adding £302 brought forward, the amount available was £[illegible] against £12,612, but the directors nevertheless repeat the dividend on the ordinary shares at 8 per cent., although this proceeding means that they must reduce the allocation to reserve from £1,500 to £500 and carry forward £103 or £160 less. With goodwill, &c., representing £110,050 out of a total capital of £150,000, this striving after big dividends seems very injudicious, to say the least of it, and the directors would have shown more forethought if they had made some effort to strengthen the position. Such provision would seem to be the more necessary as the nett allowance for depreciation on premises and plant, &c., valued at £20,491, is no more than £[illegible], while on investments in Consols, standing in the books at £23,8[illegible], there is an admitted loss of £2,556, which is in no way provided for. So far as trading accounts go, the position is decidedly comfort-

able, as liabilities to sundry creditors come to no more than £773, while debtors are £1,741 up at £11,553, but cash has shrunk from £7,362 to £3,372.

STEAD AND SIMPSON, LIMITED.

Whether the decline of £2,683 to £19,877 shown in the nett profits of this leather business for the year ended December 31 is due to a falling off in trade or to the higher cost of materials the directors do not think it worth their while to say. No profit and loss account is submitted, and the report itself is a most meagre one, merely setting forth the result after deducting debenture and loan interest and management expenses. With £2,803 or £715 more brought forward the disposable surplus was £22,680 against £24,648, out of which the preference dividend takes £9,000 and £5,000 or £1,000 less is transferred to reserve. The directors, however, would appear to have been content with a much more modest remuneration this time, although the actual amount is not revealed, as after repeating last year's distribution of 5 per cent. on the ordinary shares and paying the directors, the sum left to be carried forward is £132 up at £2,935. It is not very satisfactory to find that, while profits have dropped off in this way, there is an increase of £16,695 in stocks at the retail shops, warehouses and factories, but we suppose it may be inferred from this that the smaller gains are due to the heavier costs of materials. Creditors at £36,683 are £3,086 up and exceed debtors by no less than £16,324, but cash balances have risen by £3,836 to £4,397, while the loan of £3,584 from the company's bankers has now been paid off. Property account, less a depreciation fund of £10,000, stands at £112,863 or £7,394 more, and shop fixtures, after deducting £4,394 written off, are £2,753 higher at £43,122, but machinery, plant, &c., is valued on balance at £15,211, or £1,035 less, and against these the reserve now amounts to £41,000. A year ago the directors proposed to issue 50,000 new £1 preference shares, but apparently they have not found a favourable opportunity of placing them, and the issued capital remains at £240,000, consisting of 100,000 ordinary £1 shares 18s. paid, and 150,000 6 per cent. cumulative preference shares, in addition to which there are £130,000 in 4½ per cent. debentures and debenture stocks.

GEORGE ANGUS AND CO., LIMITED.

This is a leather manufacturing business, with establishments at Newcastle-upon-Tyne, Liverpool, Leicester, and Kettering in this country, and a branch at Johannesburg, which has done exceedingly well for its shareholders in the past. For the 18 years to December 31, 1906, the dividend has been 10 per cent. per annum, with a bonus of 10 per cent. in 1895 and of 2½ per cent. each in 1901, 1904, 1905 and 1906. Business in the past twelve months does not seem to have been quite so remunerative, but it was still good, and shareholders have to forego no more than the bonus. Nett profits, including rents and transfer fees, were £28,088, out of which £1,154 is written off for depreciation of machinery and loose plant, and after meeting debenture interest and preference dividend the ordinary shares get their 10 per cent., leaving £36,727 to be carried forward against £36,343 brought in. With a share capital of £27,500 and a debenture debt of £120,000, the company owns property valued at £168,102, and machinery and loose plant taken at £10,384, against which the reserve stands at £10,000. The accumulation seems slender, but that is due to the directors having appropriated £91,266 out of the fund in January, 1906, to wipe out the item of goodwill, so that the position is much better than it looks. Liabilities to sundry creditors are large at £125,132, but against that stocks are valued at £144,549, sundry debtors owe £22,441 and the company has in cash and bills the comfortable sum of £40,792.

LILLEY AND SKINNER, LIMITED.

Trading profits for the year ended November 23 fell off by £2,291 to £17,361, but a larger balance of £3,561 was brought in, and profit on investments yielded £275 more at £825, leaving a decrease in gross revenue of £1,719 at £21,747. This is converted into an increase of £188 at £14,053 in nett revenue by the simple expedient of depriving the staff of their bonus, and after repeating last year's dividend of 6½ per cent., another £2,000 is put to reserve and £3,748 or £177 more is carried forward. Depreciation on leases, fixtures, &c., was deducted before arriving at these figures, and the amount is not disclosed, but it does not appear to have erred on the side of liberality. Freehold and leasehold property, fixtures, &c., stand in the balance-sheet at £122,263 or only £707 less than a year ago, while goodwill remains at its original figure of £30,000, and against these the reserve seems tiny at £8,500, especially as no more than £1,040 is invested outside the business. Liabilities to creditors are £2,560 smaller at £95,086 against a reduction of £1,437 to £43,400 in sundry debtors and an increase of £563 to £14,090 in cash and bills. Stocks, however, have risen by £1,508, and seem decidedly heavy at £141,701.

RAFFETY, THORNTON, AND COMPANY.

Trade profits of last year did not find their way into the building trade, and hence, in consequence of a poor demand for timber, this company's profits are reduced by £1,825 to £1,312. After providing income-tax and allowances for bad debts, with £1,159 brought in, £2,471 is available, being £1,431 less than a year ago. Interim and final dividends are both at the rate of 5 per cent. against a total of 7 per cent., and only £186 is carried forward. The balance-sheet shows a reduction in figures all round. Cash is £902 down at £1,432. Stock-in-trade at £38,211 is reduced by £1,489. Debtors are £804 less at £14,658, and the only improved item on the sheet is a reduction of £1,764 in creditors' account to £1,263. There was obviously no opportunity to increase reserve, which remains at £6,000, which appears to be set against stock-in-trade. The company seems to be in the happy position of having nothing that requires an allowance for depreciation either in the way of premises, furniture, or plant; nor, as there is no working account given, is there any suggestion of rent being paid.

NEXT WEEK'S MEETINGS.

Monday, February 3.

A. and S. Henry and Co.—Manchester, noon.
Atlas Assurance.—92, Cheapside, E.C., 12.30 p.m.
British Investment Trust.—Edinburgh, 11 a.m.
Buenos Ayres Port and City Tramways.—2, Broad Street Place, E.C., 3 p.m.
Hart and Levy.—Leicester, 3 p.m.
Lanarkshire Steel.—Motherwell, 2.45 p.m.
London and India Docks.—109, Leadenhall Street, E.C., 2 p.m.
M. Hyam Wholesale Clothing.—Cannon Street Hotel, 11 a.m.
Maypole Dairy.—45, Leonard Street, E.C., noon.
Metropolitan Railway of Constantinople.—1, Walbrook, E.C., 3 p.m.
Mitterburg Copper.—Winchester House, noon.
Notting Hill Electric Lighting.—Winchester House, 2.30 p.m.
United Grain Elevators.—Bootle, 5.30 p.m.
Welford and Sons.—Cannon Street Hotel, noon.

Tuesday, February 4.

Bank of Whitehaven.—Whitehaven, noon.
Dublin United Tramways (1896).—Dublin, 2 p.m.
Law Union and Crown Insurance.—126, Chancery Lane, W.C., 1.45 p.m.
London, Chatham, and Dover Railway.—Cannon Street Hotel, noon.
London Guarantee and Accident.—Winchester House, noon.
Manchester Safe Deposit.—Manchester, 12.30 p.m.
Sea Insurance.—Liverpool, 2 p.m.

Wednesday, February 5.

Argentine North-Eastern Railway.—Salisbury House, 2.30 p.m.
Blundell, Spence, and Co.—9, Upper Thames-street, E.C., noon.
Cape Copper.—Cannon Street Hotel, 12.30 p.m.
Central London Railway.—Holborn Restaurant, 12.30 p.m.
City of London Brewery.—Cannon Street Hotel, 1 p.m.
Clydesdale Bank.—Glasgow, noon.
Copiapo Mining.—Winchester House, noon.
Lancashire and Yorkshire Railway.—Manchester, noon.
London, Brighton, and South Coast Railway.—London Bridge, noon.
Sun Insurance.—63, Threadneedle Street, E.C., 2 p.m.

Thursday, February 6.

British and Foreign Marine Insurance.—Liverpool, 11.30 a.m.
Brush Electrical Engineering.—Salisbury House, 11.30 a.m.
Commercial, Industrial, and Land of Egypt.—Salisbury House, noon.
Crocker, Sons and Co.—54, Friday-street, E.C., noon.
Diamond Exploration and Finance.—6, Drapers' Gardens, E.C., noon.
Great Northern and City Railway.—Westminster Palace Hotel, noon.
Harrison, Barber, and Co.—Cannon Street Hotel, noon.
London and County Banking.—Cannon Street Hotel, 1 p.m.
London and Hanseatic Bank.—38, Lombard-street, E.C., noon.
London and South-Western Railway.—Waterloo Station, noon.
Midland Great Western Railway of Ireland.—Dublin, 1 p.m.
Public Benefit Boot.—Leeds, 3 p.m.
York Waterworks.—Fossgate, York, 12.30 p.m.

Friday, February 7.

Anglo-American Telegraph.—Winchester House, 2 p.m.
Barry Railway.—Barry Docks, 2.30 p.m.
Gas Light and Coke.—Horseferry-road, S.W., noon.
Great Central Railway.—Manchester, noon.
Henderson's Transvaal Estates.—Cannon Street Hotel, noon.
North British and Mercantile Insurance.—Edinburgh, noon.
Ocean Marine Insurance.—Winchester House, noon.
Rhymney Railway—Cardiff, noon.
Rylands and Sons.—Manchester, 11 a.m.
South Wales Colliery.—Finsbury Pavement House, 2.30 p.m.
Vale of Glamorgan Railway.—Barry Docks, 3 p.m.
Victoria Station and Pimlico Railway.—57, Moorgate Street, E.C., 1 p.m.
World Marine Insurance.—21, Finch-lane, E.C., 11.30 a.m.

Sir Henry William Primrose, K.C.B., formerly chairman of the Board of Inland Revenue, has been elected to a seat on the board of the Marine and General Mutual Life Assurance Society in place of Mr. F. R. Kendall (deceased).

Victory (Charters Towers) Gold Mining.—For the six months to October 31 this company crushed 1,772 tons of stone, which yielded 1,948 ozs. of gold valued at £6,754; 28 tons of concentrates yielded £1,075, and residues, &c., £934, the aggregate of gold won being £8,764. Other items of revenue were £425, making £9,189, but to earn it cost £9,343, and a debt of £4,870 brought forward is increased to £5,024. According to the mine manager's report, the opening up of the Phœbe reef is proceeding. This reef was struck in the underlie shaft sunk on the 422 ft. formation from No. 4 shaft, and a trial crushing of 6½ tons of stone just completed yielded 21¼ ozs. of gold, besides residues valued at £11 3s. 4d.

Deposits against future queries may be lodged with the Publisher.

Grasmere.—We see no reason to change the opinion expressed in our first reply.

W. S.—This is a carefully managed company, and although the present price does not seem to afford much scope for further improvement, the shares as an investment yielding about 4½ per cent. should be reasonably safe.

W. H. G.—You would have a sharp loss on Nos. 2 and 6, but we fear neither offers much prospect of improvement in the near future. No. 6 is not a good security at best, so perhaps you had better decide to sell these two. You know of course that there is a liability of £10 a share on No. 1, and you might sell some of these—not more than 75. No. 4 is doing better at present, but if you have a profit you might sell enough of these to make up the balance of the sum required, leaving Nos. 3 and 5 untouched for the present.

J. W.—The depression is due to the general condition of the country, and as that, we fear, must continue for some years yet, the shares do not seem worth touching at the price named.

F. E. D.—(1) As an investment these seem a fair purchase, but probably a new issue will appear before long. (2) These are speculative, but fairly good. The company was outside the range of the recent collapse and is said to have been very little affected by it. (3) A respectable old concern, but the shares have fallen, principally on the depression in that country. A small purchase as a speculative investment might be made. (4) These are not very attractive and should be left alone. (5) In the present state of the business we do not regard these shares as a promising speculation.

X. Y. Z.—(1) The company's position seems hopelessly bad, and in our opinion it would be better to cut your loss rather than average. (2) Property is, we believe, good enough, but the shares are dear at the present price. We still hold 5s. to your credit on deposit account.

Grasmere.—(1) The immediate outlook is not very encouraging, as the cost of production is so high. Company owns considerable property, but it cannot do much with it just now. (2) These are high enough at present price. (3) As speculative purchases, yes. (4) See notes on report on another page. A fair speculation.

T. C.—(1) These may rise another point or two. (2) It is possible we shall see a continuance of sharp movements, and perhaps a rise on "prospects," but on income yielded the stock is high enough. (3) This gives a fair return at present price. (4) We are inclined to say sell, as trade prospects are not so good in its district. (5) Dividend is fixed by guarantee, which is quite good. Are you allowed to hold these? If not, you must exchange. Should your holdings improve it is probable that the other class of investments will rise also.

DIVIDENDS ANNOUNCED.

RAILWAYS.

City and South London.—For half-year ended Dec. 31 full on the 5 per cent. preference stock 1891, 1896, 1901, and 1903, and the transfer to the renewal fund of £1,500, sufficient to allow the payment of a dividend on the consolidated ordinary stock at the rate of 1¾ per cent. per annum, carrying forward £1,119.

Great Central.—On the preference stocks down to and inclusive of the 5 per cent. convertible preference stock, 1881, and 2 per cent. on the 4 per cent. preference stock, 1889, making 3 per cent. for 1907, carrying forward £8,000.

Hull and Barnsley.—On the ordinary stock at the rate of 3½ per cent. per annum, with £5,000 to renewal and contingency fund, and £12,623 carried forward. This dividend makes 2¾ per cent. for 1907, against 2¾ per cent. for the previous year.

Isle of Wight.—For past half-year at the rate of 3½ per cent. per annum on the deferred converted ordinary stock.

Liverpool Overhead.—At the rate of ½ per cent. per annum on the ordinary shares, carrying forward £4,178.

Metropolitan District.—On the 4 per cent. guaranteed stock for half-year ended Dec. 31 at the rate of 1⅞ per cent. per annum.

Taff Vale.—At the rate of 4¼ per cent. per annum on the ordinary stock (equivalent to 10⅝ per cent. per annum on the old ordinary stock), carrying forward £22,622, after putting £5,000 to reserve for contingencies and £8,000 towards the rebuilding of Pontypridd Station.

MINES.

Broken Hill Proprietary.—For quarter ending Feb. of 1s. 6d. per share, payable Feb. 19.

Dolcoath.—At the rate of 7½ per cent. per annum for six months ended Dec. 31.

Talisman Consolidated.—Interim at the rate of 1s. per share.

United Excelsior.—Interim of 6d. per share for year ending June 30, 1908.

MISCELLANEOUS.

Baron Cigarette Machine.—6 per cent. for year, with £2,040 carried forward.

Bovril.—On the ordinary shares at rate of 7 per cent. for second half of the year and 2 per cent. on the deferred shares for year, with £10,000 to reserve and £11,855 carried forward.

British Oil and Cake Mills.—6 per cent. on the ordinary shares for 1907, after providing £26,700 for depreciation and placing £50,000 to reserve, carrying £13,000 forward.

Cabins (1901), Limited.—For half-year to Dec. 31 on 7 per cent. preference shares.

City of Buenos Ayres Tramways (1904).—For year ended Dec. 31 balance of 1s. 3d. per share, placing £3,000 to general amortisation fund, and carrying £144 forward.

City Offices.—4s. per share on the ordinary shares for half-year ended Dec. 31, making 8s. per share for the year.

D. and J. Fowler.—Interim at the rate of 6 per cent. per annum for the half-year ended Sept. 30.

Eastman Kodak of New Jersey.—Usual quarterly of 1½ per cent. upon the preferred stock, and of 2½ per cent. upon the common stock.

George Newnes.—Interim at the rate of 5 per cent. per annum for half-year ended Dec. 31 on the ordinary shares.

Harrison, Barber, and Co.—Final at the rate of 7 per cent. per annum for the half-year ended Dec. 31, placing £2,000 to reserve, £5,000 to rebuilding account, and carrying forward £2,377.

Joseph Watson and Sons.—Interim of 5 per cent. on account of the year to March 31.

Linoleum Manufacturing.—Usual of 10 per cent. and a bonus of 7½ per cent., making 17½ per cent. for the year, carrying £5,000 to reserve and £26,410 forward.

Maple and Co.—Balance on the ordinary share capital of 9½ per cent., making 14½ per cent. for 1907, placing £5,450 to reserve.

Metropolitan Gas of Melbourne.—5s. per share for half-year, placing £22,500 to reserve, and carrying £2,600 forward.

Milwaukee and Chicago Breweries.—Final at the rate of 6 per cent. per annum for six months on the capital stock, making 6 per cent. for the year.

Morrison and Fleet's Dairies.—Balance at the rate of 10 per cent. per annum, making 8 per cent. for year ended Dec. 28.

National Mortgage and Agency of New Zealand.—At the rate of 7½ per cent. per annum for six months ended Sept. 30, with a bonus of 1s. per share, making 10 per cent. for the year.

National Telephone.—For the half-year ended Dec. 31 at the rate of 6 per cent. per annum on the preferred stock and at the rate of 6 per cent. per annum on the deferred stock, carrying £145,000 to reserve and £10,000 forward.

Nelson Brothers.—4 per cent. on the ordinary shares, making 7 per cent. for the year, placing £10,000 to reserve.

New Sharlston Collieries.—10s. per share, making 5 per cent. for 1907, and also a bonus of £1 per share.

Perry and Co.—On the ordinary shares of 10 per cent., making 15 per cent. for the year, and a bonus of 2½ per cent., making 17½ per cent. for the year.

Price's Patent Candle.—Final of £1 per share, with £10,000 written off for depreciation, and about £6,100 carried forward.

Read Brothers.—Final for six months ended Dec. 31, at the rate of 12 per cent. per annum on the ordinary shares, making 10 per cent. for the year, writing £10,000 off goodwill, transferring £7,000 to reserve, and carrying £2,000 forward.

St. James' and Pall Mall Electric Light.—On the ordinary shares of 5s. per share, making 10 per cent. for the year.

Prospectuses of Public Companies, &c. Advertised in the *Times* from July 1 to December 31, 1907. (London *Times* Office, Printing House Square, E.C.)

The Canadian Agency reminds us that the Sovereign Bank has gone into voluntary liquidation, its deposits and all other public obligations being taken over by the twelve other leading banks of the Dominion. The failed bank is only five years old, and thanks to the powers of mutual help possessed by the banks as a body not the slightest ruffle to credit took place. From the same source we learn that the Canadian Bank of Commerce has got powers to increase its capital by £1,000,000, to £3,000,000, but will not issue the new shares just at once.

This Prospectus has been filed with the Registrar of Joint Stock Companies.

The Subscription List will Open on Tuesday, 4th February, 1908, and Close on or before Thursday, 6th February, 1908.

R. & J. DICK, Limited

(Incorporated under the Companies Acts, 1862 to 1907.)

CAPITAL - - - £650,000

DIVIDED INTO

325,000 5½ per cent. Cumulative Preference Shares of £1 each £325,000
325,000 Ordinary Shares of £1 each 325,000

The Vendor firm takes the whole of the Ordinary Shares in part payment of the purchase consideration.

The Preference Shares are entitled out of profits to a fixed Cumulative Preferential dividend of 5½ per cent. per annum payable by half-yearly instalments on 15th May and 11th November, and in a winding up rank in priority to the Ordinary Shares for capital and for all arrears or deficiencies of dividends, and for a premium equal to the average premium at which the Preference Shares may have been quoted on the Glasgow Stock Exchange for the three immediately preceding years.

The dividend for the period ending 31st August, 1908, calculated from the dates on which the instalments are due, will be payable on 11th November, 1908.

No further capital can be issued to rank *pari passu* with or in priority to the Preference Shares now issued, and no Debentures, Debenture Stock, Heritable Security, or Mortgage can be created, without the consent of three-fourths in value of the holders of the Preference Share Capital for the time being present or represented at a meeting convened for the purpose, and at which meeting not less than a majority in value of the whole Preference Share Capital is held by those present or represented. The Preference Shares have equal voting powers (that is, one vote for each share) with the Ordinary on questions affecting their special interests, and one vote for every two shares on other subjects.

A Special Reserve Fund equal to three years' dividend on the Preference Shares will be gradually created and maintained as security for due payment of these dividends. This fund will be established by appropriating out of the profits of each year remaining after allowing for depreciation, and payment of the dividends on the Preference Shares, a sum of at least £10,000 of such remaining profits, until the fund has been made up, or until any deficiency in the fund arising from its having been drawn upon in any year has been made good. This money will be invested outside of the Business.

The whole of the Preference Shares are now offered for subscription at par, and will be payable as follows:—On application, 2s. 6d. per share; on allotment, 7s. 6d. per share; on March 17, 1908, 10s. per share. Interest on instalments in arrear will be charged at the rate of 6 per cent. per annum.

DIRECTORS.—The Right Honourable James Parker Smith, of Jordanhill, Glasgow, Chairman; Sir John Ure Primrose, Bart., Redholme, Dumbreck; James Goldie, of James Goldie and Son, Limited, 52, St. Enoch Square, Glasgow; J. Smith Park, M.V.O., Shipowner, 20, Park Terrace, Glasgow; John Edward Audsley, of R. and J. Dick, Greenhead, Glasgow, Managing Director; A. M'Allister, of R. and J. Dick, Greenhead, Glasgow; Adam Hay, of R. and J. Dick, Greenhead, Glasgow; David M'Connell Kennedy, of R. and J. Dick, Greenhead, Glasgow; Andrew Barclay, of R. and J. Dick, Greenhead, Glasgow.

BANKERS.—The Union Bank of Scotland, Limited, Glasgow, Edinburgh, London, and branches.

BROKERS.—Jas. Watson and Smith, 40, St. Vincent Place, Glasgow; Foster and Braithwaite, 27, Austin Friars, London, E.C.

SOLICITORS.—Alexander Robertson and Son, 243, West George Street, Glasgow.

AUDITORS.—Reid and Mair, Chartered Accountants, 40, St. Vincent Place, Glasgow.

SECRETARY AND REGISTERED OFFICE (*pro tem.*).—W. D. Robertson, 243, West George Street, Glasgow.

PROSPECTUS.

This Company has been formed for the purpose of acquiring and carrying on the business of R. and J. Dick, Manufacturers of Boots, Shoes, Balata Driving Belts, Gutta Percha Horse Shoe Pads, &c., Greenhead, Glasgow, including the Goodwill, Trade Marks, and all other assets belonging to the firm both at Greenhead and at the various branch establishments, shops, and agencies throughout the United Kingdom, Ireland, the Continent of Europe, the Colonies, and other parts of the world.

The said firm of R. and J. Dick is the Vendor to the Company.

The business was established about sixty years ago by the two brothers, Robert and James Dick, and for many years a very profitable trade was carried on from the manufacture and sale of Boots and Shoes. In or about the year 1885 there was invented and patented the now well-known Dick's Balata Driving Belt, and thereafter the firm carried on the combined businesses. Mr. Robert Dick died in 1891, and the concern was continued by his brother, Mr. James Dick, until his death in March, 1902. Since then it has been successfully conducted under the management of the present partners, who, under the arrangements contained in the Settlement of Mr. James Dick, have recently completed the purchase of same and acquired the whole assets thereof. Mr. John Edward Audsley, one of the partners, has been connected with the business for upwards of forty years, and he has taken the chief part in the management for a considerable number of years. The other acting partners have also been associated with the management for long periods, and by the Minute of Agreement and Sale after-mentioned, they, as well as Mr. Audsley, have agreed to continue their services with the Company for not less than seven years, if so required.

The Works, situated at Greenhead, in the East End of Glasgow, are of an extensive character, and admirably adapted for the purposes of the business. The Boot and Shoe Factory is of modern construction, and the appliances for the manufacture of the firm's specialities in this trade are thoroughly up to date, all desirable improvements having been adopted from time to time. A Factory was specially built for making the Belts, and the machinery is of the most complete character, being largely the invention of the original partners, subsequently developed by their technical staff.

The Belting, which is of great strength and durability, is, in the course of manufacture, treated with a special solution of Balata, a substance of the nature of Gutta Percha. Though the patents expired some eight years ago, the Belting, in spite of competition, maintains its position both in the home and foreign markets, and the sales have continued to expand from year to year, the turnover for the last eight months exceeding all previous records for the same period.

The business will be taken over as at August 31, 1907, with right to profits from that date.

	£ s. d.
The company will acquire—	
1. The property known as Greenhead Works, M'Phail Street, Glasgow, and adjoining ground, valued by Messrs. Thomas Binnie and Son, Valuators, Glasgow, on September 12, 1907, at	27,190 0 0
2. The whole fixed and moveable machinery, plants, tools, utensils, and others connected with the business, valued by Mr. John Norman, Consulting Engineer and Valuator, Glasgow, on August 30, 1907, at	51,424 16 9
3. The whole stocks of goods, materials, stores on hand, and fittings in the factory at Greenhead and the various shops, valued by Messrs. Walter J. and R. Buchanan and M'Cloy, Licensed Valuators, Glasgow, on August 31, 1907, at	202,906 11 3
4. Goods, stock, and cash in hands of agents valued at £221,753 1 1	
5. Book debts which are valued at 39,101 6 9	
	260,854 7 10
The Vendors guarantee that this sum of £260,854 7s. 10d. will be realised in terms of the Minute of Agreement and Sale dated January 18 and 21, 1908.	
6. In cash the sum of	11,848 1 11
7. The Goodwill of the business, the price of which has been fixed at	155,000 0 0
	£709,223 17 9
Less Sundry Creditors of Vendor Firm	59,223 17 9
	£650,000 0 0

The books of the business have, since the year 1902, been regularly audited by Messrs. Reid and Mair, Chartered Accountants, 40, St. Vincent Place, Glasgow, which firm, together with Messrs. Kerr, Andersons, and MacLeod, Chartered Accountants, 149, West George Street, Glasgow, have granted the following certificate as to the profits for the past four years and eight months:—

Glasgow, November 6, 1907.—Having examined the books of Messrs. R. and J. Dick, Greenhead, Glasgow, for the four years and eight months ended August 31 last, we certify that the firm's profits were as follows:—

For the year ended December 31, 1903	£51,549	8	6
For the year ended December 31, 1904	44,279	8	11
For the year ended December 31, 1905	67,232	12	8
For the year ended December 31, 1906	84,220	3	6
For eight months ended August 31, 1907	56,621	10	3
	£303,903	2	4

equal to an average profit of £65,122 1s. 11d. per annum.

In arriving at these profits no allowance has been made for depreciation of the Greenhead Factory buildings or plant, interest on capital or borrowed money, or income-tax, but all other current expenses have been charged, including management salaries.

REID AND MAIR, C.A.,
KERR, ANDERSONS, AND MACLEOD, C.A.

The sum required to pay the Preference dividend of 5½ per cent. is only £17,875, so that the amount of the above average profits affords an ample margin.

The Company will fulfil all trade contracts which are of the usual character, and all other business engagements and obligations of every description, current and unexecuted at 31st August, 1907, and will likewise be responsible for all tenders made by the Vendor firm then pending. The Company will also take over and relieve the Vendor firm of all leases and tenancies entered into in connection with the said business and pay the sundry creditors as above mentioned.

Under the Minute of Agreement of Sale after referred to, the price to be paid for the business property and other assets before mentioned is £650,000, payable as to £325,000 in fully-paid Ordinary Shares of the Company, and as to the balance, £225,000 in cash, and £100,000 in cash or fully-paid Preference Shares, or partly in the one and partly in the other in the option of the Directors.

Interest at the rate of 5 per cent. per annum will be payable to the Vendor firm on the purchase price from the date of sale until paid or satisfied.

No part of this issue has been underwritten, and no promotion money has been or will be paid.

The Vendor firm will pay the preliminary expenses up to the date of allotment, including registration fees, the fees of the Brokers, Valuators, Accountants, and Solicitors, also the cost of printing, advertising, and issuing the Prospectus and Allotment Letters, the expenses relating to the Minute of Agreement and Sale, the conveyance of the heritable property and the stamp duties thereon, which are estimated at £20,000.

The Articles of Association provide that the qualification of every Director shall be the holding of 500 shares of the Company.

The following are the provisions of the Articles as to the voting powers of Shareholders and the remuneration of Directors:—

63. Every holder of ordinary shares shall have one vote for each share held by him, but the preference shares shall only confer on each holder the right to one vote for every two shares held by him, except in the cases following:—At the statutory meeting or a meeting called upon requisition, as aforesaid, or when the dividend upon the preference shares or any of them is one month in arrear, or the meeting is convened for increasing or reducing the capital, or for winding up, or sanctioning a sale or amalgamation of the undertaking, or taking any other steps under Article 51 hereof, or issuing any debentures or debenture stock, or creating any heritable security or mortgage affecting the Company's lands or works, or for altering the Articles of Association of the Company, or where the proposition to be submitted to the meeting directly affects the rights and privileges of the holders of the preference shares. In all these cases the preference shares shall confer the right to one vote for each share held. All holders of shares, whether ordinary or preference, shall be deemed to be members of the company, and shall be summoned to all general and extraordinary meetings thereof, and shall have the right to attend and vote either in person or by proxy in accordance with the terms of this Article.

80. The Directors shall receive as remuneration for their services such sum not being less than at the rate of £2,430 per annum) as may be fixed by the Company in general meeting, and such remuneration shall be divided among them in such proportions and manner as the Board may determine.

81. If any Director shall be called upon to perform extra or special services of any kind, or to travel or to go or reside abroad for any business or purposes of the Company he shall be entitled to receive such sum as the Board may think fit for expenses of living, and also such remuneration as the Board may think fit, either as a fixed sum or as a percentage of profits, or otherwise, and such remuneration may, as the Board shall determine, be either in addition to, or in substitution for, his share in the remuneration of the Directors otherwise provided, and the same shall be charged as part of the ordinary working expenses. The Directors shall also be paid all reasonable travelling expenses and outlays incurred by them in attending Board meetings.

82. The Board may from time to time appoint one or more of their number to be a Managing Director or Managing Directors of the Com-

pany or Manager or Managers of Departments, either for a fixed term or without any limitation as to his or their period of office, and may from time to time remove any Managing Director or Manager and appoint another in his place.

83. The remuneration of a Managing Director or of a Director who is Manager of a Department shall, subject to the terms of any agreement on that behalf, from time to time be fixed by the Directors, and may be by way of salary or commission or participation in the profits, or by any or all of these modes, and may be in addition to any remuneration receivable by him as a Director.

Messrs. John Edward Audsley, Andrew M'Allister, Adam Hay, David M'Connell Kennedy, and Andrew Barclay, five of the Directors, are interested in the promotion and in the property proposed to be acquired by the Company as partners of the Vendor firm, and to the extent of their holding therein, viz., 10/96 shares thereof each.

The following contracts have been entered into:—

1. Minute of Agreement entered into between Sir William Robertson Copland, Civil Engineer in Glasgow, now deceased, John Edward Audsley, of Messrs. R. and J. Dick, Greenhead, Glasgow, Robert Simpson Murray, Banker in Rutherglen, and Alexander Robertson, Solicitor in Glasgow, the surviving Trustees of the deceased James Dick, Gutta Percha Boot and Shoe and Belt Manufacturer, Greenhead, Glasgow, of the first part; and the said John Edward Audsley, Andrew Barclay, and Adam Hay, all of R. and J. Dick, Greenhead Factory, Glasgow, A. M'Allister, of R. and J. Dick, 296, High Holborn, London, Peter Denniston and Peter Brock, both of R. and J. Dick, Greenhead Factory, Glasgow, Thomas Traill, of R. and J. Dick, Kalverstraat, 21, Amsterdam, David M'Connell Kennedy and Robert Burns, both of R. and J. Dick, Greenhead Factory, Glasgow, James Walker, of R. and J. Dick, residing at Ashleigh, School Road, Moseley, Birmingham, John Fleming Linn, of R. and J. Dick, 55, Queen Victoria Street, London, E.C., Robert Ewing Lockhart, of R. and J. Dick, 153, Argyle Street, Glasgow, Allan Mair, of R. and J. Dick, 12, Gallowgate, Glasgow, and David Galbraith, of R. and J. Dick, 18, Gallowgate, foresaid, who are the partners of the said firm of R. and J. Dick, the Vendor to the Company, of the second part; dated April 26 and 30, 1907. By the terms of a Deed of Arrangement left by the late Mr. James Dick, dated March 4, 1902, the second parties to the said Minute of Agreement were entitled to purchase from Mr. Dick's Trustees the whole business and assets of R. and J. Dick, for the capital sum standing at Mr. Dick's credit in the books of the firm at the time of such purchase, and also the factory and fixed machinery at the sum of £20,000. At the time of Mr. Dick's death, in March, 1902, his capital in the business, apart from the value of goodwill, stood at £351,550 17s. 10d. or thereby, and there was a Bank Overdraft then existing amounting to £143,177. From the time of Mr. Dick's death until the said second parties exercised the option to acquire the business conferred on them by the said Deed of Arrangement, the business was carried on under a scheme of management provided for by Mr. Dick in that Deed. By December 31, 1906, Mr. Dick's capital as above mentioned had been reduced by payment to the sum of £194,039 1s. 5d., and, in addition, the whole of the said Bank Overdraft had been paid off. By the Minute of Agreement above mentioned, the said second parties, in exercise of said option, purchased and acquired from Mr. Dick's Trustees (1) the whole business and assets of R. and J. Dick (exclusive of the factory at Greenhead), upon payment of the balance remaining due at December 31, 1906, of the deceased's capital in the business (excluding the value of the goodwill), which balance, as before mentioned, amounted at that time to £194,039 1s. 5d.; and (2) the factory at Greenhead and fixed machinery, upon payment of the said sum of £20,000 fixed by Mr. Dick as the price thereof in the said Deed of Arrangement.

Under the powers contained in the said Deed of Arrangement, Mr. Dick's Trustees, on the acquisition of the property by the said second parties, lent to them the sum of £180,000, whereof £35,000 has already been repaid, and the balance of this loan (£145,000) will be repaid to Mr. Dick's Trustees out of the proceeds of the issue now offered for subscription.

2. Minute of Agreement and Sale, dated January 18 and 21, 1908, between the said R. and J. Dick, and the partners thereof, of the first part, and the said Alexander Robertson, as Trustee on behalf of the Company, of the second part.

3. Minute of Sale of property at corner of Spui, Sir [illegible], The Hague, between the said Trustees of the said deceased James Dick and the said John Edward Audsley and A. M'Allister, for and on behalf of the said firm of R. and J. Dick, dated April 25, 1907.

4. Minute of Sale of property, 62, Hoogstraat, Rotterdam, between the said Trustees of the said deceased James Dick and the said John Edward Audsley and A. M'Allister, for and on behalf the said R. and J. Dick, dated April 26, 1907.

By the two last documents the Vendor firm agreed to purchase from Mr. Dick's Trustees these two properties at the prices of £3,160 and £2,840 respectively, payable on or before Whitsunday, 1908. The Company will take over and relieve the Vendor firm from those two purchases.

Application will be made to the Glasgow and London Stock Exchanges for a settlement in and quotation for the Preference Shares.

Application for shares may be made on the accompanying form and lodged with the Bankers of the Company, together with a deposit of 2s. 6d. per share.

If no allotment is made the application money will be returned in full, and where the number of shares allotted is less than that applied for the surplus will be applied towards the amount due on allotment, and any excess will be returned to the applicant.

Failure to pay any instalment will render the previous payments liable to be forfeited.

The minimum share subscription upon which the Directors may proceed to allotment of the shares now offered to the public is fixed by the Articles of Association at £225,000.

The usual brokerage or commission of 3d. per share will be paid by the Vendor firm.

A copy of the Memorandum of Association is printed on the back of this Prospectus and forms part hereof.

Copies of the Memorandum and Articles of Association, the Minute of Agreement and Sale, the Accountants' Certificate, the Valuations, and other documents above referred to may be inspected between the hours of 10 and 5 at the office of the Solicitors of the Company, Messrs. Alex. Robertson and Son, 243, West George Street, Glasgow.

Copies of the Prospectus, with forms of application, can be obtained at any of the offices or branches of the Company, or from the Bankers, Brokers, Solicitors, and Auditors of the Company.

Glasgow, 30th January, 1908.

R. AND J. DICK, LIMITED.

(Incorporated under the Companies Acts 1862 to 1907.)

Issue of 325,000 5½ per cent. Cumulative Preference Shares of £1 each.

APPLICATION FORM.

To the Directors of R. and J. Dick, Limited.

GENTLEMEN,—Having paid to the Company's Bankers the sum of £..... sterling, being a deposit of 2s. 6d. per share on ..... Preference Shares of £1 each in the above Company, I—we hereby request that you will allot to me—us that number of such shares, and I—we agree to accept the same, or any less number you may allot to me—us, upon the terms of the Prospectus, dated 30th January, 1908, and the Memorandum and Articles of Association of the Company, and I—we authorise you to place my name—our names upon the Register of Members in respect of the shares which may be allotted to me—us.

THE CAPE COPPER COMPANY, LIMITED.

Meetings of Ordinary and Preference Shareholders.

NOTICE IS HEREBY GIVEN that a separate General Meeting of the Holders of the Ordinary Shares in the above-named Company will be held at the Cannon Street Hotel, in the City of London, on Wednesday, the 5th day of February, 1908, at 12.30 o'clock in the afternoon, for the purpose of considering and, if thought fit, passing the subjoined resolution as an extraordinary resolution; that is to say:—

That the provisional agreement dated the 27th day of January, 1908, and made between the Company of the one part and Percy John Franks, of 9, Queen Street Place, in the City of London, on behalf of all the Holders of the Ordinary Shares in the Company's capital of the other part, which has been submitted to this meeting, be and the same is hereby confirmed, and that the Directors be and they are hereby authorised to affix the Common Seal of the Company to such agreement in token of ratification.

AND NOTICE IS ALSO HEREBY GIVEN that a separate General Meeting of the Holders of the Preference Shares in the above-named Company will be held at the Cannon Street Hotel, in the City of London, on Wednesday, the 5th day of February, 1908, at 12.45 o'clock in the afternoon (or so soon afterwards as the General Meeting above referred to shall be concluded or adjourned) for the purpose of considering and, if thought fit, passing the subjoined resolution as an extraordinary resolution; that is to say:—

That the provisional agreement dated the 27th day of January, 1908, and made between the Company of the one part and Percy John Franks, of 9, Queen Street Place, in the City of London, on behalf of all the Holders of the Preference Shares in the Company's capital, of the other part, which has been submitted to this meeting, be and the same is hereby confirmed, and that the Directors be and they are hereby authorised to affix the Common Seal of the Company to such agreement in token of ratification.

The agreements above referred to may on any day prior to the day of meeting above mentioned be inspected at the office of the Company during business hours. The agreements provide that every Holder of Preference Shares in the Company's capital shall be at liberty by notice in writing to the Company, accompanied by the certificate or share warrant relating to the Shares, to convert his Preference Shares or any of them into Ordinary Shares, and contain various ancillary provisions.

Each agreement is conditional upon the corresponding agreement being confirmed as above.

Holders of Share Warrants for Ordinary Shares wishing to attend the meeting of Ordinary Shareholders, and Holders of Share Warrants for Preference Shares wishing to attend the meeting of Preference Shareholders, must deposit the Warrants at the office of the Company three clear days before the meetings.

This Notice is given pursuant to clause 49 of the Company's Articles of Association as recently altered by special resolution.

Dated the 27th day of January, 1908.

By order of the Board,
P. J. FRANKS,
Secretary.

FORTY-FIFTH REPORT OF THE DIRECTORS,

To be submitted to the Shareholders at the ORDINARY GENERAL MEETING, to be held at the Offices of the Company, 39, Cornhill, in the City of London, on Thursday, the 16th day of January, 1908, at Half-past Twelve o'clock in the Afternoon.

THE DIRECTORS beg to submit to the Shareholders the statement of the affairs of the Company for the half-year ending 31st December, 1907.

The Accounts, including the balance brought forward from last half-year, and after making provision for bad and doubtful debts, show a gross profit of £296,249 2s 7d. Allowing rebate of interest, amounting to £160,493 6s 4d, on bills not yet due, and deducting current expenses, there remains a balance of £117,598 3s 2d. Out of this sum the Directors have placed £15,000 to Reserve Fund, making it £480,000, and recommend the payment of a Dividend at the rate of 11 per cent. per annum for the half-year, free of Income Tax, carrying forward £61,348 3s 2d.

The member of the Board retiring by rotation is Mr. HENRY OPPENHEIM, who, being eligible, offers himself for re-election.

The Auditors, Mr. THOMAS A. WELTON and Mr. ADAM T. YOUNG, retire in accordance with the Articles of Association.

The Dividend will be payable on and after the 18th inst.

By Order of the Board,

W. B. HOBBS, *Secretary.*

W. B. HOBBS, *Secretary.* W. T. BRAND, ARTHUR J. FRASER } *Directors.* Balance brought down .. £61,348 3 2

In accordance with the provisions of the Companies Act, 1900, we certify that all our requirements as Auditors have been complied with.

We have examined the Securities representing investments of the Company, those held against Loans made by the Company at call, short and fixed dates, and all Bills discounted in hand. We have also verified the Cash Balances, and vouched the Securities and Bills given as collateral security for Loans, and we have now to report to the Shareholders that the foregoing Accounts agree with the Books, and in our opinion the Balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs as shown by the Books of the Company, except that, whilst it shows the amount of the Bills discounted which have been re-discounted, it does not show the amount of the Bills and othor Securities given out against Loans shown on the debit side of the Balance-sheet.

London, E.C., *7th January*, 1908.

THOMAS A. WELTON (Welton, Jones & Co.),

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 527. SATURDAY, FEBRUARY 8, 1908. (Registered as a newspaper.) Price 6d
New Series.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Great Central Railway.

A very proper and seasonable protest was made by the *Financial Times* of Monday last regarding the manner in which this company's accounts are presented. At the beginning of 1907 the Lancashire, Derbyshire, and East Coast line was incorporated with the Great Central system, and its capital of £2,678,543 added to that of the absorbing company. The figures for the past half-year include the earnings of this acquired line, but those for the corresponding half of 1906 are not made up so as to include the separate accounts of the "Dukeries" line for that period. Therefore no true comparison can be made, and even when we go back and examine the figures of that line for the second half of 1906, we can only make guesses, for no hint whatever is given anywhere in the Great Central report now published about the results of its operations in the December half of 1907. There may be a purpose in this reticence, and we can understand that the directors are not particularly anxious to let much daylight in upon the finances of the Great Central, but even so, it would have been better to treat the shareholders in a straightforward fashion. How can a man like Sir Alexander Henderson reconcile himself to slovenliness of this kind? In the second half of 1906 the Lancashire, Derbyshire, and East Coast Railway earned £87,661 gross or £12,098 more than in the second half of 1905, but working expenses rose by £10,576, so that the gain in nett was minute. In the past half-year the gross earnings of the combined properties are put at £2,303,412, or £173,216 more than in the second half of 1906, whose gross figures, however, are given for the Great Central alone. If we assume that the "Dukeries" line gave only £88,000 of this increase, it would follow that the gross income of the Great Central itself was really only about £85,000 in the past half-year. In the same way, working expenses at £1,555,048 show an increase of £143,203, and if we deduct, say, £59,000 for the share of the "Dukeries" line not shown in the figures given for comparison, the increase in the Great Central's expenditure would be about £84,000, or almost the equivalent of the increase in its gross income. What is the true state of the case? Will Sir Alexander Henderson explain at the meeting of shareholders, held too late to be dealt with by us this week? We hope he will. Merely as a matter of record, it may be added that the ratio of expenses to receipts amounted in the past half-year to 67.29 per cent., compared with 66.04 per cent. in the second half of 1906, but that also tells us nothing to the purpose.

Greater significance, even allowing for the confusion in the accounts produced by the reticence just mentioned, attaches to the analysis of the income and outgo. The largest portion of the increased gross revenue came from minerals, and amounted to £109,344, but as minerals constituted the best part of the traffic of the "Dukeries" property, it may be assumed that the bulk of this increase is due to it. Last half-year passengers gave the Great Central only £21,569 more and merchandise £30,020 more, the general result, after deducting increases in expenses, being a nett increase of £30,012 in the free income, which is brought out at £753,364, and in the second half of 1906 the nett revenue of the "Dukeries" line was just over

£30,000. There is thus no progress here, and an increase of £4,536 in the Great Central's share of the joint lines' nett receipts is nearly offset by a decline of £3,554 in the balance brought forward, so that the entire disposable revenue of £885,727 is only £30,994 more than in the second half of 1906, or again allowing for the nett receipts of the acquired line as at December 31, 1906, an increase of little more than £800. And as it stands, the whole of this increase and more is swept away by the augmented fixed charges, which rose by no less than £56,531. Debenture and other interest charges alone took no less than £45,450 more, and £10,148 more was paid on general interest account. It follows, therefore, that the revenue available for the preference stocks of the company, for there is no question of ordinary stock, is actually £25,535 down at £365,559, and the board is compelled to reduce its dividend payments. A year ago the full interest was paid not only on the 1881 but on the 1889 preference stock, and 10s. per cent. was given for the year on the 1891 preference stock, but this year nothing at all comes to the 1891 stock, and the 1889 stock gets only 3 per cent. for the year, or 1 per cent. less than the interest due to it. In this way £26,150 is knocked off the distributable amount, and £613 more is left to carry forward at £8,121. Surely this is a miserable enough story, and its unpleasantness is not lessened by a study of the various items of expenditure. Thus locomotive power cost £80,993 more and traffic expenses went up by £24,075, while £15,480 more was spent on maintenance of way, and steamboat expenses rose by no less than £13,237. Except in law and Parliamentary expenses, £1,726 lower, there is not a single item of the outgoings which shows a decrease of as much as £1,000, but in the same half-year £1,380 of legal expenses was charged to capital account, in addition to £13,715 debited to capital on account of stamp duty and expenses incident to the issue of a new debenture stock. Even rates and taxes are up £252, the company having in this respect to exhibit a tendency contrary to that displayed in the accounts of other English railways.

And when we come to the capital account, it is, if possible, worse still. We have already stated that the fixed charges increased by £56,531, much of the increase being no doubt due to the charges involved by the absorption of the "Dukeries" line, but the capital account is everywhere so overloaded with dead-weight charges as to mark the property out as one of the most insolvent of the kind in the three kingdoms. And capital expenditure continues on the most lordly scale, no less than £542,865 having been laid out during the past six months. Lines opened for traffic absorbed £281,690 of this, and working stock £91,342, while no less than £128,785 was attributed to the capital outlays of subsidiary lines, the capital expenditure on docks, steamboats, and other special items amounted to £37,208, bringing the total under these heads up to £4,662,111, while the nett revenue from the boats was only £9,000, and from Grimsby Docks £22,000. In the current half-year only £248,000 is put down as the probable capital outlay, and if we could believe in this estimate it might be held to indicate a disposition to reform, but we can have no faith in any estimates of this water-logged and much entangled undertaking. Anyhow, the result to date is a capital account overdrawn to the amount of £4,195,688, against which there is only £993,000 of pension fund money, savings bank deposits, and fire insurance funds available amongst the resources of the company. These funds are all absorbed in the capital account, and not very well secured at that. The consequence is that the company owes £400,000 on a "temporary loan," as it is called, that the debt due on Lloyds bonds remains at £931,500, and that £1,237,266 is owing to the Great Western for its expenditure on the Banbury branch and on the Great Western and Great Central Joint Railways, the one having absorbed £280,360 and the other £956,907. In addition to £503,375 due to other companies, the Great Central also owes £760,491 on "sundry outstanding accounts," an item which if it appeared in the balance-sheet of an American railroad would suggest the early appointment of a receiver. No wonder the Great Central has entered into an agreement with the Great Northern; the wonder is that the Great Northern had anything to say to it, for in a little time a derelict of this description might have been picked up cheap. But even the agreement, if it is allowed to go through, will not save the debt-drowned Great Central property from a drastic reorganisation of its finances some day, and until that takes place the compact will be of very little use to the dominant Great Northern Company. We are sorry to have to write in this manner about any English railway company, but it cannot be helped, for the position of the Great Central is fully as great a scandal in railway finance as that of the Chatham and South-Eastern companies. And the mischief has a common origin in past mismanagement.

German Views on Banks and Banking

(By the London Correspondent of the *Frankfurter Zeitung*.)

Banking in Germany in its principles and its bearings is so different from English ideas that in times of storm and stress grave apprehensions as to the soundness of the German structure become rife, and, in a way, unduly court distrust in financial and trade circles. The object of this article is to bring home to the readers not only the distinction, as it is understood, between banking in Germany and in England, but also to show that, upon the whole, the banking community in Germany is guided by sound and safe principles, although they may not always coincide with English notions. While banking in England essentially means attracting deposits at low interest rates and employing the funds so received in buying bills of exchange, making advances, investing in securities, in Germany the functions of a bank are much more manifold, and embrace a much wider scope, inasmuch as the ordinary activities of an English bank are combined with the financing of trade and industry, the granting of open credits, and the issuing of and dealing in securities, &c.

Great efforts are being made in Germany during the last few years in order to divide banking in a similar way as is done in England, by means of establishing deposit banks, which would assume the same functions as deposit banks in England, whilst the other part of the business would be undertaken by credit and commercial institutions. On the other hand, it is strange that at the time when these efforts are made in Germany a movement is on foot in England to extend the hitherto simple and limited transactions of the clearing banks into a field which has thus far been the undisputed domain of private and commercial banks by the establishment of foreign exchange departments. Some years ago already the London City and Midland Bank launched out in this direction, and a short time ago the London and County Banking Company followed the lead then given by absorbing a small private banking firm, whose business was intended to be used as a basis for the further development of this branch of banking. It is, however, questionable whether a foreign exchange department, as such, considering the small margins of profit in that line and the heavy expenses incurred in connection therewith, can be made very profitable. Furthermore, it must be borne in mind that transactions of this kind effected by business people who are absolutely independent of credit, and, therefore, not in any way tied to certain houses, are only few and far between. In most cases a certain credit, even if only for a short period, is involved in such transactions. An export house doing business with over-sea countries sells its drafts, either with or without documents attached; the purchaser of these drafts undoubtedly affords a credit to the seller. Import houses, on the other hand, as a rule, pay the amount of their invoices by opening a credit with their bankers, who will accept bills against them, these bills being covered later on

by the import house. These are the most usual bill transactions, and, no doubt, the most legitimate ones.

Commerce and industry require credit facilities almost everywhere, and even in a more extensive measure than the foregoing examples show. Covered credits (against stocks, merchandise, real estate, guarantees, &c.) and uncovered credits are also largely made use of, especially on the Continent and in over-sea countries. Wherever these are granted in a reasonable and prudent way, commerce and industry have developed considerably, to the mutual advantage of both parties—the commercial houses and the banks. This, of course, implies on the part of the banks an intimate knowledge of the situation and circumstances of their debtors and of the branch of their trade, combined with a continual supervision. In this way the relations grow more intimate, and the interests of bankers and merchants become more and more interwoven.

In England the provincial clearing banks, in contrast with the London clearing banks, also extend credits (overdrafts) to their customers, but there are no binding arrangements between them, nor is it a question of continual credit, so that one cannot reckon upon it with certainty at all times.

In England trade and industry already commanded considerable capital of their own at a time when in other countries they had only just commenced to develop. They were, therefore, not dependent on outside resources, which, no doubt, has proved of great advantage. There is, however, a reverse side to this situation. The feeling of financial independence gradually produced a certain *laissez faire*, which had a great deal to do with the fact that commerce and industry have not adapted themselves to modern requirements to such an extent as has been the case abroad.

This unfamiliarity with credit facilities, such as they are, regularly practised in other countries has in course of time caused people here to look upon any such arrangements as in themselves undesirable, and even that it was something unusual or objectionable. It may be said, however, that a great number of people have no conception of the nature and importance of the credit system which has developed in other countries. If in this country, for instance, owing to the expansion of business, or in consequence of withdrawal of capital in connection with the retirement or death of partners, &c., it becomes necessary to procure fresh means, these are very frequently provided by transforming the business into a limited liability company, and by issuing debentures. This explains the large number of public companies with small share capital. Owing to this also, it is difficult for able young men with no means at their command to launch out in business for their own account, especially as until quite recently there was no form of limited partnership such as obtains in Germany. In that way the rejuvenation of the economic organism is interfered with, and its vitality is weakened.

The absence of closer relations between trade and industry on the one hand and the credit institutions on the other has, moreover, led to undesirable developments in other directions. Where such relations do exist, they generally result in a better mutual appreciation of views and requirements, in effective co-operation, in common unity of interests and common prosperity, provided, of course, serious and honest principles prevail. The banker, *i.e.*, the giver of credit, can make his knowledge and experience useful in financial organisation, especially in cases where it has been found necessary, for some reason or other, to transform undertakings into limited liability companies, and to secure interests and participations in the same in a wider circle. By assisting in the formation of such companies, the credit institutions assume a certain responsibility, both financially and morally, whilst at the same time they generally have an important voice in the management, and are represented on the directorate, &c. This inter-linking of interest undoubtedly offers certain guarantees.

In England, on the contrary, limited companies are formed in many cases by none too scrupulous promoters, with the assistance of the Stock Exchange, whose interest in the business ceases with the successful underwriting or flotation. Banks and credit institutions entirely abstain from identifying themselves with industrial undertakings in this way, simply out of consideration for their credit and standing. As a result, many business concerns have been over-capitalised to such an extent as to hamper their profitable development. Numberless companies have come to an unfortunate end owing to original watering of capital, and partly to subsequent mismanagement, many of which might have been saved by the co-operation and backing of experienced and conscientious financial interests. It may also be taken for granted that a great many swindles in the Stock Exchange would have been prevented, or at least checked in time, if closer relations existed between conservative banking elements and the Stock Exchange. The regulations of the latter institution ought to be subjected, not only to its own committee, but also to representative interests outside.

The lack of closer contact between industry and credit institutions on the one hand and the Stock Exchange on the other proves to be a great disadvantage, not only to the parties immediately concerned, but also to the public at large. In the same way it is also a drawback that banks and bankers hardly ever come into direct touch with each other. The meetings at the Royal Exchange twice a week are sparsely attended, and are, so to speak, only *pro formâ*. In other centres of the world bankers meet daily, and in discussing important events, or exchanging information and opinions, matters often present themselves in different aspects; many fatal rumours are dispelled in embryo, unfounded suspicions nipped in the bud; whilst, on the other hand, a timely check may be put to excessive credits used by firms working beyond their means. Regular and more frequent meetings of bankers should really be arranged.

(To be continued.)

The United States Panic as seen from Chicago.

It is always well to hear the other side, and the following able and valuable letter received from a keen observer of great experience, who has been in business for many years in Chicago, will enable readers to look at the recent crisis from the inside, and realise that the upset in New York did not and could not mean the stoppage of business throughout the entire country. Protectionists will, perhaps, note the confident prediction of the writer as to coming liberal reductions in the tariff:—

"I can add but little to what you already know regarding the New York stock panic of 1907, beyond stating some features and incidents of the times which may interest you. As frequently stated, one who has never visited the United States and studied on the ground its economic, political, and social conditions, will, however able he may be, find it difficult to understand many things which are important features in our life—our almost unlimited resources, together with many of our characteristics, the natural outgrowth of environment, which, in addition to developing abilities and energy in the native population, have done much the same for immigrants and made successful men who take an interest in affairs out of hundreds of thousands, who, had they not emigrated, would have remained "hewers of wood and drawers of water." These conditions, taken all together, have created phenomenal prosperity for which there is no parallel, and made of us a people who cannot be properly judged by many of the old-world standards.

"But our prosperity has its drawbacks. Our opportunities are so great that a decade of prosperous years is likely to produce over-trading and over-speculation, which goes on until the reaction comes, but recuperation is rapid, and we soon recover, when development

and accumulation of property again go on. Also, we are a new country, and subject to rapid changes, especially in population and wealth centres, which have an important influence on our business life.

"A few years ago our wealth was in the states east of the Allegheny Mountains, and it was that wealth, together with foreign capital, which furnished the means for developing the eleven central, western, or Upper Mississippi River valley states, which are now the great agricultural and wealth centres of the country, as it was the wealth and conservatism of the central west, which prevented a serious spread of the panic. The central west, for the most part, uses its accumulations in continuing development, and does not invest in railroad or other large corporate securities much, except in those of the highest class; therefore it has not had to share in enough of the Stock Exchange losses to be worth considering. Whatever its losses have been they were due to derangement of business, and uncertainties incident to such tremendous losses at the country's great financial centre.

"The panic was nothing more or less than a collapse of speculation, and any reference to how it was brought about, or how it was certain to end, would be but little more than a repetition of what you have been saying in the Investors' Review during the past few years. Also, the particular events which precipitated the panic are of no great importance, for the collapse was due, and came, and if it had not come from one cause it would from another. I fail to see, however, how any act of President Roosevelt's had anything to do with creating the panic, as is charged on Wall Street.

"The check given the downward rush of prices October 24 by Mr. Morgan and others evidently saved the situation, but I doubt the wisdom of issuing clearing-house certificates. It was stated, and is uncontradicted, that Mr. Morgan opposed this issue, but be that as it may, I think a high financial authority was right who said to me, 'The New York banks became alarmed for fear the people would be alarmed, and then did that which was sure to alarm them, and caused increased distrust of New York banks, through which more money was drawn out, and less deposited, than all the clearing-house certificates amounted to.'

"Disclosures of frauds and mismanagements in large corporations centred in New York, which involved many prominent men in finance, had created distrust throughout the country, and a belief that the banks were heavily overloaded with practically unsalable collateral. Then, too, the panic came at a time when the New York banks had to pay out unusually large sums which they held on deposit for moving the crops.

"Also, there has been for several years more money in the central west than there was profitable use for, and the banks in states as far west as Kansas and Nebraska have been large buyers of commercial paper in New York through brokers; therefore there was no means of knowing its aggregate amount, which proved to be much larger than anticipated. Ordinarily, the proceeds of much of this paper would have been reinvested, which in this instance was not done; therefore there was an additional unexpected drain on the eastern banks. Altogether the New York banks had difficulties to overcome requiring the best ability and exercise of good judgment from hour to hour, together with command of great financial resources.

"Depositing in national banks by Secretary Cortelyou money lying idle in Washington was the proper thing for him to do. The system under which enormous sums of money are taken out of circulation to lie idle in Washington is thoroughly bad, but the money having been so taken, there was but one proper course open to him, which was to, when it was so badly needed by the people, make it available as quickly as possible, and the best and only legal way was to deposit it in national banks.

"The money drawn from banks and hoarded was in currency, not gold. Except on the Pacific Coast, gold has not formed an appreciable feature of the circulation for the last 50 years. We are not accustomed to its use; currency is much more convenient, and as the people have unlimited confidence in all our circulation, since we have been established unequivocally on a gold basis, they demand paper money. Nor do they care which kind it is, as the Government is practically behind all of it; therefore greenbacks, gold certificates, silver certificates, and national bank notes are used promiscuously and without preference. Nor do they look to see what bank a note is issued from, for since the establishment of the first national bank some 40 years or more ago no one has lost a penny on one of their notes.

"Since I began writing this, I had occasion to draw a few hundred dollars in currency, and I find 40 per cent. of it is in gold certificates. About four weeks ago I drew $160 to be laid by until called for, as was done yesterday, and I found that it consisted of eight twenty-dollar gold notes. The money was drawn from a bank which imported a large amount of gold, and I imagine that, finding it impracticable to pay it out over the counters, or send it to country banks, it took out gold certificates. These certificates were new and evidently recently received from the Government. You will, no doubt, find it difficult to understand our preference for our paper currency over gold, but it is literally true. Should anyone want gold for currency, he would be readily accommodated by any bank carrying gold.

"The fact that the national bank notes are regarded as good beyond question appears to have been sufficient for the people, and as a result we have a banking system inferior in other respects to that of any first-class Power, which has about as much elasticity as a block of marble. Efforts are being made by the present Congress towards enactment of laws which will furnish some elasticity. I fear, however, that what they do now will be little more than to furnish a makeshift.

"When the New York banks suspended ordinary payments, banks, especially in the reserve cities, like Chicago and St. Louis, which held deposits of several thousand country banks, which also deposited in New York, were finally compelled to adopt a similar course. The suspensions, however, were, after all, largely nominal. Each bank or cluster of banks appeared to manage to suit themselves, pay as usual on demand, or avoid as far as possible the paying out of large sums, except for necessary purposes. Refusing to pay a cheque representing money on deposit would be an act of bankruptcy; therefore non-payment would have to be a matter of agreement with the depositor. Savings banks for a while enforced the time rule, but I have not known a single instance of a man suffering through not being able to get his money from a commercial bank. But the stories circulated of such instances were enough to make one believe that Ananias originated them, and Munchausen gave them their proportions.

"Chicago banks did not take kindly to the issue of clearing-house certificates, and actually issued but $7,613,000, which were entirely in small denominations, used chiefly for pay rolls, and never got into general circulation. Excepting five which I got from a bank for people who wanted them, I saw but one, which when paid me a man from Denver asked me for. They have been called in, and three or four days ago there were only $1,350,000 yet outstanding.

"Except for a very few days, grain crops moved marketward, as usual, but in the south large quantities of cotton were said to be held by combinations of planters for higher prices. New York banks were constantly remitting large sums to pay for farm products, and how freely money was remitted by Chicago banks for the same purposes is shown by the fact that Chicago banks remitted from October 1 to December 3, 1907, to country banks $5,966,569 more than during the same period in 1906.

"One occasionally hears predictions, but not from sources entitled to much consideration, that as a result of the panic New York will never again be the financial centre which it has been. There is nothing in it, for

reasons too obvious to require repeating it will remain our financial centre.

"About a year ago Chicago banks adopted a system of clearing-house inspection, and all banks are frequently examined by clearing-house inspectors. Their reports go before a governing board, some one of whom is almost certain to know the value of every security reported. This system will put an effectual stop to any banks making dangerously large loans on a security not having a known market value. Loans of this character have already brought two banks in Chicago to grief. Some other clearing-houses are talking of adopting the same system, and no doubt will do so.

"While I may have my own opinions, I certainly will not undertake to predict what the course of stock values will be on the New York Stock Exchange for some time to come, further than that it will no doubt be difficult to sell in the ordinary way a great many issues formerly dealt in, which will now have to be nursed and peddled out as opportunities occur, or *are made*.

It should be borne in mind that our railways were for the most part constructed to develop new country, and at the least possible cost. In most cases it was years before the roads could pay running expenses, and a majority of them was forced into liquidation. But the rapid development of the country within another few years furnished business enough to turn losses into gains. Cheap construction, however, necessitated large expenditures for improvements and repairs. In the meantime, the adoption of engines weighing two to four times the weight of those formerly used, and of freight cars to carry from 60,000 to 100,000 lbs in place of 20,000 to 30,000 lbs, as formerly, necessitated new and stronger bridges, heavier rails, &c., &c.

"Very large sums have already been expended for these purposes, and large sums will yet be required, not only for the purposes indicated, but for increasing terminal facilities and elevating tracks in cities. While all these expenditures are necessary and perfectly legitimate, they will absorb money otherwise available for dividends, unless when produced by an increase of capital or bonded debt. There will be, however, an increase of business and reduction of operating expenses, which will in part or wholly compensate for the expenditures.

"There has been a very rapid improvement in the condition of the New York banks within the past 20 days, while banks throughout the whole country appear to be unusually strong in cash resources. General business is going forward on a larger scale than anticipated a month or two ago, but the volume done in 1908 will be less than in 1907, chiefly because of conservatism caused through fear of disasters the danger of which appears to have passed.

"The country has been very prosperous over the past eight or ten years, and never more so than during the first nine months of last year, and never as rich in money and property of intrinsic value as at this time. Also, agriculture, our greatest source of wealth, has enjoyed nearly a decade of phenomenal prosperity. The annual report for 1907 of Hon. James Wilson, Secretary of Agriculture, shows the value of agricultural products for the year, including poultry and dairy products, to be $7,412,000,000 (£1,482,400,000), and the greatest of any one year. It is 10 per cent. greater than in 1906, 17 per cent. greater than 1905, 20 per cent. greater than 1904, and 25 per cent. greater than 1903. He also states that during the last nine years the wealth created on farms aggregated the enormous sum of $53,000,000,000 (£10,600,000,000).

"While this gigantic sum, which has arisen from one source of production, is beyond intelligent comprehension, yet one familiar with the country in travelling over it now will, without regard to these or any similar figures, be impressed with the evidence of great prosperity which is seen in all directions, and will be lost in any attempt to estimate what this source of wealth will produce in the comparatively near future, when, as competent authorities tell us, the increase will be stimulated by so many new acres, including about 60,000,000 acres of the rich swamp and so-called swamp lands, now being gradually brought into cultivation, and by the improved methods of cultivation which in many cases are already showing wonderful results.

"Importations for 1908 will no doubt be considerably reduced; therefore, if we have fair crops this year, there will certainly be a considerable increase in the balance of trade in our favour, larger, I imagine, than will be for our own good. We have an abundance of money now, and would be gainers by the money which we do not need being left in the hands of our customers, and utilised in taking from them through the channels of commerce more of the products of their labour in exchange for the foodstuff and cotton furnished by us to them. They must pay for these things with their labour, and if they cannot pay us largely in that way must find sources of supply where they will be more liberally dealt with.

"Fortunately, the effects of our outrageous tariff laws are being in a measure alleviated by the sums of money annually sent to Europe by former immigrants, the money expended by Americans travelling in Europe, and freight money paid foreign vessels, which, it is estimated, will aggregate about $300,000,000. Nearly all of this money, directly or indirectly, reaches people who have to earn their livings by some kind of labour.

"It now begins to look as though tariff reform can no longer be staved off, and that with the end of the present administration reforms in our tariffs on imports will be the most prominent economic question in the United States."

Economic and Financial Notes.

Our Monstrous Expenditure.

We are glad to see that the Prime Minister has consented to give Mr. Murray Macdonald and the friends of retrenchment a day for a preliminary overhaul of the army and navy estimates. He is well known to be himself in favour of a return to the usages of prudence and economy in the national expenditure, but gossip says, and probably says truly, that the jingoes in his Cabinet have overruled him. Ominous reports are in circulation to the effect that the navy estimates are to be increased, and they are probably only too well founded; for we cannot go on building ships of war, leviathan and other, without adding yearly to both the construction bill and the upkeep bill. A spirit of insanity in the wholesale murder business is abroad among the nation's guides and masters, and it threatens us with imperial impotence at no distant day unless wiser counsels can be made to prevail. The present outlay on both army and navy is a corrupt outlay, whose product is unreadiness and inefficiency, as well as an outlay beyond all reasonableness or necessity. A return just issued discloses a reduction of 25,489 officers and men in the numbers of our regular army, and of 7,727 in those of the militia and militia reserve, as well as of 12,805 in the volunteers, but we may be sure no adequate reflection of these decreases will be found in the forthcoming estimates. Therefore we venture to press upon the friends of economy, in Parliament and out of it, the wisdom of demanding that the estimates should be submitted to committees before they are flung out upon the House in their indigestible and incomprehensible enormity. Let us know something of where the money goes, who gets it, and what the nation is getting for it. Remember that the country is entering upon a period of industrial reaction, which may become severe enough to try the stability of more than one great credit wielding and multiplying machine, and which is already beginning to tell upon the resources of the labouring classes and on those of some at least among their employers. If Parliament and the Ministry prove unable to come to the help of the struggling in all walks of life and fields of labour by materially easing the load of taxation, the reaction may well culminate in far-spread disaster. Economy,

in short, is the vital political question of the day, and woe betide the Government which ignores it.

The Case of India.

Whatever sentiment may dream, sense compels the political student to side with Mr. Morley on the question of self-government for India. The Indian people are in no sense prepared for endowment with a privilege so fatal to them in their present condition. It is because we know the impossibility of giving India a "Duma" or any other description of representative assembly that we are wearisomely insistent upon cutting down the Imperial expenditure there, so as to give the people relief, some easement in the circumstances of their lives, without which our Empire runs danger of perishing of exhaustion under our diligent, restless, doctrinaire guidance. Consider what would happen now were circumstances to arise by which we should be compelled to withhold, were it but for a few years only, the annual supply of the £10,000,000 or more now drawn from the capital of the United Kingdom to meet the requirements in capital of the Simla Government. In that event the whole system of Indian finance would be instantly brought in danger of irretrievable disaster. As it is, with this help in the shape of new capital unremittingly poured into the country, the British administration of the peninsula has been forced to inflict upon the people, to their permanent and increasing injury, an artificial system of currency, by whose action prices are being artificially raised and existence made increasingly burdensome to the great mass of our subjects. The fact that this is the consequence is beginning to be understood by the Simla Government, although it refuses as yet to face the consequences, goes on instead augmenting the burdens of the people, and adding to the already ominous load of interest and military charges whereby the afflictions of the entire population are increased. What India wants to-day, and most of all, is repose from the ravages of the dragon of militarism and such relief from the ever mounting charges of new British capital as would permit the Government to at one and the same time remit taxation and give the Treasury the means to affect improvements out of the revenue surplus. And unless reforms are effected in these directions poverty must on the average of years increase in India—poverty and discontent. We move now in a vicious circle of hide-bound routine, like moles in their underground burrows, and the best blood of the kingdom is drained away to sustain and uphold a dominion we are deliberately sacrificing to traditions, superstitions, formulæ, and the clamour of those whose minds are attuned to the dictates of fear alone. Well may the unprejudiced onlooker pray that a better spirit may arise and prevail before it be too late. For the temper of all classes and races of the nations of India grows yearly more sullen and insolent towards their alien rulers. They mutter to each other: "Japan thrashed Russia; no longer are the pale faces of the West invulnerable; let us show our contempt for them and bide our day." And we maintain an enormous native army, so that the white troops may be useless for our protection when the smouldering fires of discontent break into flame. It is not self-government India now most needs, but wise government.

Yorkshire Indigo, Scarlet and Colour Dyers.

Thanks to the apathy and supineness of the shareholders, the disgracefully unjust scheme of reorganisation advanced by the directors of this miserable wreck on the advice of a certain Mr. F. A. Kelley, of Sheffield, was pushed through all right, and it is no use crying about the business now. The mischief is done, but dividendless preference shareholders may derive a melancholy satisfaction from the fact that the ordinary proprietors have not yet derived any benefit from the unfair reconstruction. The accounts for the year ended June 30, 1906, seemed to have got buried away with the wreckage resulting from the writing off; at least, we have never had a sight of them, and the statement now submitted covers the period to December 31, 1907, a matter of a few months. In future the accounts will be made up to the end of the year instead of to the middle. The scheme for the reduction of capital was sanctioned by the Court in December last, and the share capital now amounts to £78,000, against the former issued amount of £312,000, so that somebody or other "made" £234,000 clear, not a bad picking out of a small combine. According to the auditors, the sum available under the capital reduction scheme has been applied in writing off all book valuations not represented by available assets, in reducing the values of the investments to market price, in writing down the assets of the closed branches to the new valuation—they are evidently still supposed to be worth something—and the balance remaining has been written off the assets of the branches in operation. Glancing at the balance-sheet, we note that the closed branches are in at £12,012 and the general property account at £122,267, together £134,278, still an excessive valuation, judged by the latest accounts, and we should not care to hold any of the debenture stock, £142,050 in amount. In other ways the position now, as always, is tolerably comfortable, the investments, for example, being worth £28,360, while the cash balances come to £15,144 and debtors exceed creditors by £22,439. Stock-in-trade is entered at £20,273, and seems moderate. But how about the promise of better things held out when the reconstruction was foisted on the shareholders? Nothing in the shape of a profit and loss account is issued, and shareholders get the bare intimation that the trading for the past six months resulted in a profit of £3,778, of which £3,334 was required for debenture interest, leaving £444 to be carried forward. We are not even told if the directors' fees are on the same lavish scale as before. But shareholders, like nations, usually get the kind of masters they deserve.

The Cash Reserves of the London and County Bank.

At the meeting of the London and County Bank proprietors, held on Thursday, Mr. John Annan Bryce, M.P., made an important announcement. Dealing with the question of Bank reserves, he gave it as his opinion that the maintenance of a large general gold reserve at the cost of the banks is not necessary. If a large reserve is necessary, the duty to provide it should lie with the Government. We fear it will never assume that duty, for its own enormous banking business is maintained in an appearance of solvency by the help of the joint-stock banks, since it keeps never a shilling on its own account. Leaving this point, Mr. Bryce proceeded to deal with the question of the cash resources of individual banks, and in doing so made the announcement that the London and County intends from this time forward to make the charge impossible against it, as against the other banks, that it is guilty of "window-dressing" for the monthly statements of assets and liabilities. With the return to be published next week, this bank will state not only the average figures of its cash in hand during the preceding month, but the actual amount held at the date of the exhibit. The directors are much to be commended for taking this important step forward of their own motion, and we have no doubt the other great joint-stock banks will be prompt to follow the excellent example thus set. It is infinitely better that practical reforms of the kind should come from the banks themselves than that Government should intervene, for the less Government has to do with the conduct of business the better.

Our Foreign Trade in January.

The exhibit looks at first sight a very bad one. Imports have fallen off by £4,166,488 compared with January, 1907, to a total of only £56,368,358. This is a decrease of 6.88 per cent. upon the previous total, but still an increase of £2,894,025 or 5.4 per cent. on January, 1906. Exports have also slipped back, but to a much less serious extent, especially in view of the fact that the total is still £3,633,000 up compared with January, 1906. Last month, however, imports at £34,407,467 showed a decline of £662,840 or 1.88 per cent. upon the figures for January last year. There

was a still heavier decline in the exports of foreign and colonial merchandise, which at £6,599,209 show a drop of no less than £2,194,067 or nearly 25 per cent. on January, 1907, and a decline of nearly £847,000 on January, 1906. It is far too early in the year just begun to lament, and we must not forget that a year ago the business was feverishly stimulated in many directions. Prices were also abnormally high. A reaction is, therefore, now reasonable enough, and will probably continue more or less pronounced for the whole of the current year. The figures have reached us too late in the week to be analysed with any minuteness, but we must not omit to note that the Board of Trade has again introduced a number of changes, all of them tending to improve the quality and minuteness of the information given month by month. Thanks to these changes, the enlarged tables will for some years render minute comparison of one month with another a little difficult, but the changes are all in the right direction. We still, however, get the summary tables as before, and it is interesting to note that in the past

Imports.

	1906.	1907.	1908.	
	£	£	£	£
Imports..	57,955,378	67,859,363	60,163,305	— 7,696,057
Exports	43,335,404	48,733,540	45,382,136	— 3,351,404
Excess value of imports over exports	14,619,974	19,126,823	14,781,169	— 4,344,653

month the decline in the importation of raw materials and articles mainly unmanufactured was £1,893,342 and in articles wholly or mainly manufactured £2,400,144, while food, drink and tobacco cost us about £208,000 more. There was also on the export side a falling off of £999,468 in the exports of manufactured commodities, while raw materials went up by £356,568, but coal alone accounted for an increase of £637,157 in this category, so that the foreign demand for that raw material has not dwindled to the extent that might have been expected. There is a great falling off, however, in the demand for iron and steel and their manufactures, the falling off in which is £703,393 on the comparison of months.

American Business Notes.

Wall Street does not appear to have been quite pleased with the New York Bank averages published last Saturday, but they seem good enough, and the accumulation of gold is now so considerable as to enable the players to view lightsomely the beginning of exports of the metal to Buenos Ayres. Loan averages show a decline of £357,000, but specie has gone up by £1,580,000, and although greenbacks are down £320,200, the increase in the stock of money is none the less £1,260,000 or thereby on the week. Deposits also have risen by £2,267,000, and the surplus reserve is again better, this time by £692,000, so that its total is now £8,105,000, compared with £2,527,000 at the same date a year ago. This is indeed a creditable show, capable of generating much mischief. Already £100,000 of the gold has gone off to Buenos Ayres. Call money, none the less, remains dirt cheap on Wall Street at 1½ to 2 per cent.

Owing to pressure on our space, partly due to the interesting letter, printed as a leader, giving the American view of the crisis, we can only note in the briefest way some incidents of the week relating to United States business affairs. Happily, they have been uneventful. All steel makers have joined in the endeavour to disregard market tendencies, and will keep up the price of their products at previous figures, their argument being that they did not raise prices while the demand was good, and therefore ought not to do so now that it has become bad, but they overlook the fact that prices could not be raised further than the tariff permitted. They were put at the maximum it gave scope for, and had they been lifted above that, domestic monopolists would have been beaten by foreign producers. The Pennsylvania Railroad is said to have given out an order for 55,000 tons of rails, in addition to the 30,000 tons of last year's order unexecuted, and they are to be real rails, not pipe-stems.

President Roosevelt has been disturbing the minds of financiers very much by a special message to Congress denouncing the iniquities of the monopolising financier, and all New York papers shout in harmony that he did this to spoil the chances of Governor Hughes in the coming Presidential campaign. Mr. Hughes delivered the initial speech in his campaign as Republican candidate for the Presidency the same night that Mr. Roosevelt's message was sent to the newspapers, and naturally these organs of public opinion had to give space to his torrential harangue to the damage of Mr. Hughes's chances. That is the New York view, and it is not distinguished by charity, for all the papers agree also in declaring that Mr. Roosevelt means to stand again himself. We hear from New York that he keeps telling his friends that war with Japan is "inevitable." We shall see about that.

Messrs. J. P. Morgan and Co. are not, after all, to issue the £10,000,000 new loan required by New York, the business having been placed in the hands of Messrs. Seligman and Co. Whether or not this means that the terms offered by that old and eminent house are better than those Messrs. Morgan were willing to concede we cannot say, but the bonds ought to be good, no matter who puts them out, for New York can hardly yet have exhausted its credit, extravagantly ill-governed though the great city may be. But why are the bonds put up here for tenders? John Bull is in no mood to bid high for such wares just at present.

The new capital issues, or proposed issues, in the United States were larger last month than prudence dictated, but yet nearly £7,000,000 less than the total for January, 1907. The railroads, however, contrived to emit nearly £10,000,000 of short and long term notes, against £23,500,000 in the preceding January, and the bond issues authorised rose to £11,308,000, as against only £3,482,200, while the total stock issues authorised by the railroads is £5,664,000, against only £600,000 the year before. It does not follow that all these creations have been sold, but the haste to prepare for their sale is significant enough in present circumstances. Industrial companies are also busily occupied in the same direction, their note issues authorised having amounted to £1,000,000 last month against £5,000,000 in January, 1907, but the bond issues authorised amount only to £1,500,000 compared with £2,400,000, and the new stock authorised to £2,280,000 against £3,332,400.

The Illinois Central Railroad, now controlled by Harriman for the Standard Oil crowd, is about to issue £6,000,000 or so of new securities, probably equipment notes, and the Southern Pacific makes such a grand display with its earnings for the past year—owing

over to pay 12½ per cent. dividend on its common shares—that it too must want a lot of new capital

Particulars are now given regarding the proposed reorganisation of the Westinghouse Electric and Manufacturing Company, and as the big creditors are interested in carrying it through it looks as if the project might be completed. Briefly, the company is going to issue £7,000,000 of 5 per cent. first mortgage and collateral trust bonds with which to take up the existing mortgage debt of £3,700,000, together with floating debts of various denominations, including £1,842,000 of bills payable and £790,300 of accounts payable. There is also a floating debt secured by collateral securities amounting to £1,750,000, of which £550,000 represents the partly issued 5 per cent. French loan, but this debt is to remain substantially as before, only that the securities held by the French creditors, and originally designed to cover the whole loan of £800,000, are to be surrendered to the extent of the £240,000 unissued. These arrangements as to debts, however, are insufficient to lift the company out of its embarrassment, and, therefore, what is substantially a stock assessment amounting to £1,400,000, or $7,000,000, is to be made. The present stockholders, both assenting and preferred, are expected to subscribe for this new stock to the extent of 25 per cent. of their existing holdings, and all the money, it seems to us, will be required, if not more. We should have had better hope of the company's future if the assessment had been either larger or if a really drastic reorganisation and cutting down had taken place.

Thanks to the money poured into Canada by investors in the United Kingdom, fully 50,000 men are to be employed upon railway construction there this year. The Grand Trunk Pacific Company will give work to 14,000 men west of Winnipeg, and different contracting firms will require at least 35,000 men, while the Transcontinental Railway Commissioners are inviting tenders for six additional sections—four in New Brunswick and two in Ontario—of a length of 365 miles.

Meanwhile, less money is to be given to the distressed settlers in Alberta and Saskatchewan than was at first proposed. They are now to get £575,000, instead of the £750,000 first mentioned; but whether this reduction is due to the diminished area to be sold, to the departure of settlers whose means are exhausted, or to the less impoverished condition of those who remain is not explained.

A good deal of interesting information is supplied by Mr. J. L. Payne, Comptroller of Railway Statistics for the Dominion, about the position of the carrying companies in that country. Altogether, there are 27,611 miles of railroad, including double lines, sidings, &c., of which 1,099 miles were built last year, and 32½ miles of new second track. The total capital represented by this mileage is nearly £234,400,000, and the nett earnings last year were £8,598,000 or 3.66 per cent. on the total capital sunk, the cost per mile of line opened being £11,400. The total earnings came to £25,348,000, an increase of 17.09 per cent., and working expenses to £20,750,000 or 19.07 per cent. These figures, however, do not tally with those setting forth the total nett earnings, but we cannot explain the reason for the divergence. Last year was notable for the number of people killed and injured on the railway, and the question of defective rails is discussed by Mr. Payne in anything but a reassuring tone. It is admitted that in 1906 there were 537 cases of broken rails on three railways, and of these defective rails 439 had been in service for one year and under. The killing of 35 persons and the injury of 287 by derailments may in some degree have been the price which Canada paid last year for hasty and imperfect production of steel rails. We should judge it is also part of the price paid for an obstructive Protective tariff. The total number involved in the year ended June 30, 1907, to which the figures given relate, was 587 killed and 1,698 injured. Among the killed were 249 employees, and 1,126 of the employees were amongst the injured. A sufficiently distressing exhibit.

Passing Events.

The end of the long conflict on the Stock Exchange has been to give an increase of freedom to members. Instead of drawing tighter than ever the line supposed to separate broker from jobber, that line has been altogether obliterated by the elimination of "rule 75," which enacted that "members or their authorised clerks may not act in the double capacity of brokers and dealers," or jobbers. Whatever the consequences may be in the long run, this must be regarded as a step in the right direction were it for no other reason than because the rule has always been ineffective for its purpose. Dealers have always acted as brokers and brokers as dealers when occasion arose, or when strong enough, and a few firms in the Exchange have always possessed this freedom of action, because they were in existence before the arbitrary distinction was sought to be established. An anomaly has, therefore, been removed, and the next step to be taken is to remove the barrier now put up against advertising. Within limits easy to define members ought to be set at liberty to make their qualifications and position known to the public, or to offer securities they may be dealers in direct to investors. The fight is not yet over.

The Exchequer receipts are beginning to indicate the effect of diligent collection, and last week's revenue came to £4,569,858, of which £2,233,000 was provided by property and income tax, the entire receipts for the week being brought up to £4,671,108 by the inclusion of £101,250 received as repayment of advances for interest on Exchequer bonds under capital expenditure account. The outgoings on supply, the National Debt, local taxation, and Consolidated Fund account reached only £2,142,102, but in addition £548,822 was devoted to the redemption of debt out of the surplus revenue, as well as £7,029 of the proceeds of Suez Canal shares drawn and redeemed, and £200,000 was advanced under the telegraph Acts, so that the total outgoings amounted to £2,889,953, leaving £1,773,155 to be added to the bank balances of the Exchequer, now up to almost £7,700,000, as against £5,864,000 at the same date last year. The Money market is, therefore, being pinched as usual in this quarter of the year; in fact, rather harder than usual, in spite of debt redemption.

The Governor-General of India has informed the Viceroy that last week the total number of persons in receipt of State relief in the whole of India has risen to 576,427, and there appears also to be a considerable number of people in receipt of relief amongst the native states, but these may be included in this total. Good rain has fallen in the Punjab and North-West Frontier Province, and slight rain in Burma, Madras, and Assam, but elsewhere, with insignificant exceptions, the week has been rainless, and prospects are, therefore, increasingly gloomy. The Government, however, is evidently alert and alive to the crisis, so that there is no call for anxiety upon that score. What is distressing is the helplessness of a people, always brought into high relief the moment the rainfall is short of requirements.

Some interesting leaflets and tables have been issued by the Clerical, Medical, and General Life Assurance Society, presenting tempting schemes for old age pensions combined with endowment insurances for a capital sum. To this old and carefully managed company's schemes reference has already been made, but we did not notice the extension of its "prime cost" or discount bonus system to these new old age pension policies. This prime cost system is worked so as to utilise the bonuses accruing on with-profit policies in reducing premiums to a scale actually below the society's non-profit rates. Thus 80 per cent. only of the ordinary full with-profit premiums is paid by the policy-holder, and the remaining 20 per cent. is advanced by the society at 5 per cent. interest, to be accu-

mulated against the current bonuses. The constantly increasing profits of the society have enabled it to take this course with confidence, and furthermore a tontine reversionary addition to the amount of the policy is also offered, which does not affect the amount payable under the policy or the surrender values in any way, but adds to the ordinary bonus an additional payment on survival beyond the fixed age when the policy matures. Every endowment policy of the society now contains an option to exchange at maturity the capital amount insured with tontine bonus for a definitely fixed amount for an old age pension, and this option can be exercised at any time or left alone, as the insurant pleases. Thus an endowment policy maturing at the age of 60 provides that each £1,000 payable under it can be cancelled for a pension of £88 1s. 8d. per annum, or if the age is 65 the pension annuity will be £104 11s. 8d. There are many other particulars in the circulars well worth study.

The news from Copenhagen that the Grundejerbank, or Freeholders' Bank, of that city, has stopped payment is very unpleasant. It has a capital of 20,000,000 kroner (18.1592 kroner to the £), or say £1,110,000, and it seems the bank has been the victim of a run for days past, so that the capital needed to carry on its business was threatened with exhaustion. Therefore its directors decided to close its doors.

No board of directors in the country looks after the interests of its company more vigilantly than that of the London and India Docks. Accordingly, no sooner did it become aware that in seconding the Address in the House of Commons Mr. Howell Davies had roundly asserted that "a great deal of British trade had been filched through the lack of facilities in the Port of London" than Mr. Sydney Holland promptly asked the traducer to prove his assertion. He could not; on the contrary, he slunk away from it rather meanly, with the remark that he "had heard otherwise" than Mr. Holland said. Upon receiving this reply, Mr. Holland, on behalf of the board of which he is deputy chairman, proceeded to give Mr. Davies a trouncing which should make that gentleman shy of again plunging into a subject about which he plainly has no knowledge. "On the point of loss of business," Mr. Holland observes, "the Royal Commission on the Port of London reported that they were unable to conclude that the figures show any relative decline of London compared with the Continental ports, allowing for the difference in the nature of the business done." This is true, and it is not the fault of the dock companies if the river channel has not been deepened so as to allow the new Cunarders or ships of magnitude approaching them to come up to the port.

The Week in Mines.

South African Gold.

Dealers describe the past week as one of the quietest ever experienced in the South African market, and that is saying a great deal. There seems to have been a complete cessation of all interest in South African shares, and market leaders speak of the condition of affairs in despairing terms. They are quite unable to think of any new move likely to put a little life into the Circus, and the prospect of a renewal of activity is, to say the least, remote. But the fact is, as we pointed out before, the public took absolutely no part in the recent run up in prices, and the only effect of the display was to stock the shops and supporting groups with more shares at higher prices. The means of many must be well nigh, if not quite, exhausted, and the game had to be abandoned from sheer inability to keep it going. Fluctuations during the week have been on the smallest possible scale, and the tendency was naturally towards lower prices. On Monday came the statement that the Randfontein issue had proved a failure, and would be withdrawn, and although the company has not sent out an official notification, there is little doubt of its truth. At any rate, some people have had their cheques returned, and the company has not denied the story. It would be interesting to know how much was subscribed of the £1,000,000 offered in 6 per cent. participating certificates. Randfontein shares went down when the issue was announced, and performed in precisely similar fashion when it was withdrawn. A more significant commentary on the state of the market could not be made. There is still an absence of official news concerning the East Rand amalgamation, talked of these months past, and it was suggested that the deal was off, but that is not so. Some said the scheme might not be finally settled for a long time yet, and, on the other hand, a cable from Johannesburg is to the effect that the terms have been definitely fixed up, and the proposals may be out at any moment. In fact, some particulars have leaked through, and we refer to these under "Mining News." The difficulty of getting the thing fixed up has mainly arisen from the natural reluctance of the producing and profit-earning companies to saddle themselves with mines still in the process of development, and to get over this it has been arranged that the non-producing companies should be asked to take shares on which dividends would not be immediately paid. Another amalgamation hinted at is between the Village Deep and the Turf Mines, and opportunely comes intelligence of good developments on the former. It is said that tube mills will be brought into operation next November. The sale of the Bonanza Company's property and plant realised only £9,000, the purchaser being the Robinson Central Deep. The latter company announces that it is proposed to install tube mill equipment to improve the extraction, and it is expected that 35 stamps will be working by the middle of this month and the balance at the beginning of March. The tube mill equipment will commence operations at the end of March, and the joint milling capacity of the old and new plants is estimated at 29,000 to 30,000 tons a month.

Land, Finance and Rhodesians.

Central Mining shares have picked up steadily, and of course it has been denied that such a thing as dissolution of the company is in the minds of the directors. At the same time, it seems to be tacitly admitted that a capital reorganisation is under consideration, as only in this way can dividend payments be made possible. Owing apparently to confusion of names, a story got around that the General Mining and Finance contemplated a capital reduction, but this was promptly denied from headquarters. The shares were dull towards the close, and other prominent counters in this group went down when mentioned, which was rarely. Rhodesians remained in a neglected and stagnant condition, and the market is quite without history. Eldorados and Rhodesian Bankets struggled up 6d. or so, but even this trifling gain could not be retained, and the utter lack of business led to this section going the way of all others.

Diamond Shares.

These, perhaps, have been a little more interesting than other things South African, and fluctuations have certainly been wider. Paris supported De Beers to some purpose, and ran the deferred up to 14⅝; but the rally was short-lived, and the price was soon back to 14¼, the market remaining dull to the close. Premiers touched extremes of 6¼ and 5⅞, and it is noticed that any rise, especially in De Beers, immediately encourages fresh Bear selling. It is known that some of the big people can see no permanent rally in the market for a considerable time. Jagers were a little stronger at first, but then receded sharply, and Laces were at the exhilarating figure of 1s. 6d. Roberts Victors kept in the neighbourhood of £1, and nothing else was mentioned.

Australian and West African.

There was much less doing in Broken Hill shares, and while the colony sent encouraging advices they were unaccompanied by fresh business. The metals were quiet and moved narrowly. On the whole, share prices were pretty well maintained, although absence of business eventually caused some dulness. In the

West Australian division Great Boulders were put up on a cable reporting very good developments at the 2,200 ft. level, the greatest depth so far worked on the West Australian field. Kalgurlis, Ivanhoes, Great Fingalls, and Boulder Perseverance all added something, but Hainaults and Horseshoes closed dull. Waihis, which had a big rise at the end of last week on reports of good developments, especially on the Edward Reef, came back a little; but Waihi Grand Junctions further picked up, and Talismans, after being lower, recovered the loss. New Zealand Gold Fields were also harder. No one cared a rap about West Africans, but Taquahs and Broomassies tried to firm up.

Copper, Tin and Miscellaneous.

The monthly copper statistics were not encouraging for the Bulls, the visible supply showing a further increase of 950 tons, and the price of the metal opened flat. Shares followed, and distinctly lower prices were soon reached, Tintos, for example, dropping to 65⅝. The first prices, however, were the worst, and some buying from Paris brought about a speedy recovery. Mount Elliotts were helped by a good cable, and there was a run on Manicas which put the price to about 21s. Satisfactory developments are reported, and the plant is expected to be at work in a few months. Other shares picked up as the week progressed, assisted by a rally in the metal. The many adverse rumours circulating regarding the Rio Tinto mine have drawn a letter from the chairman, but it cannot be said to put all fears at rest, and there is an ambiguity about it that is anything but reassuring. Tin spurted smartly, and in one or two cases prices rallied, Pahangs putting on a couple of shillings; but, on the whole, the market was not in a very grand state. As to the remaining groups, Indian shares were in some request, and Mysores are 5½ again. Nundydroogs and Ooregums also hardened. The American shares moved irregularly, and there was a set-back in Esperanzas. Siberians were not mentioned.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The East Rand Fusion.—After having been persistently talked about for several months, it seems that the scheme for amalgamating the East Rand Proprietary Mines with its subsidiary interests has at last been fixed up. We shall defer analysis of the proposal until the official documents are before us, but a certain number of facts have become known, and are useful to go on with. No less than 11 companies are embraced in the fusion, and the task of bringing all interests into line could not have been easy. The East Rand capital is £1,000,000, and the first thing done was the capitalisation of the right to 25 per cent. of the profits possessed by the H.F. Company, and this was accomplished by issuing to it 333,000 East Rand shares. Regarding the other companies, the value of East Rands is put at £3 13s. 9d. as the basis for calculation, and the exchange price is to be Angelo 3⅜, Cason 3½, New Comet 1⅝, Driefontein 2½, Angelo Deep ¾, New Blue Sky ¾, Cinderella ¾, Driefontein Deep 1⅛ and Hercules 1⅛. The greatest difficulty to be got over was the natural reluctance of the producing companies to burden themselves with non-productive properties, but this has apparently been met by leaving the Angelo Deep and Driefontein Deep out of the East Rand dividend due next June, while the Hercules will get no dividend until June, 1910.

City Deep Amalgamation.—A perfect mania for amalgamation has become prevalent on the Rand, and while on the broad principle some of the schemes are doubtless worthy of serious consideration, it has always to be remembered that in nine cases out of ten the arrangements are made to suit the interests and financial convenience of the controlling groups. Moreover, it is usually found that whether a plan be good or bad, hurtful perhaps to one body of proprietors and unfair to another, the position is such that the magnates' word is law. Protests may be made, but a majority vote is almost always controlled, and the necessary arrangements become a mere matter of form. We have already given some details of the City Deep amalgamation, but full particulars were promised early this month, and they are duly to hand. The City Deep takes over four undertakings in exchange for 869,805 shares allotted in the following manner. The South City receives 228,305 shares for 177 claims, the freehold of 42 claims and £127,500 cash; the Wolhuter Deep 215,875 shares for 150 claims, the freehold of its entire area and £127,500 cash; the South Wolhuter 343,125 shares for 422 claims, the freehold of 47 claims and £186,500 cash; and the Klipriversberg Estate and Gold Mining 82,500 shares for 145 claims and the freehold of 1,358 morgen 76 square roods. The City Deep's own property, consisting of 190 claims, the freehold of its whole area and £53,200 cash will be represented by 247,500 shares, making the total £1,117,305. The capital of the amalgamated company will be £1,250,000, so that 132,695 shares will remain in reserve, and it will own 1,085 claims together with the freehold of practically the whole of that area. The cash assets will amount to about £494,700, out of which a small liability of one of the companies must be met and the transfer duties in connection with the scheme. The rate of share exchange will be, City Deep 55 new for every 100 held; South City, 50 for each 100; Wolhuter Deep, 55 for each 100; South Wolhuter, 45 for each 100. All along there has been a certain reticence regarding the Klipriversberg position, and in this case the exchange terms are not mentioned.

New Rietfontein Estate Gold Mines.—This company belongs to the Barnato group, and during the year ended August 31 the full mill of 120 stamps was kept steadily at work, whereas for nine out of the previous twelve months only 60 stamps were in operation. Tonnage of ore crushed was 205,315, or 89,465 tons more, yielding 77,814 ozs., or 7.580 dwts. per ton, while 154,029 tons of sands were cyanided, producing 27,359 ozs., and 51,148 tons of current slimes gave 4,816 ozs., in addition to 2,061 ozs. from 21,447 tons of accumulated slime. Total recovery, therefore, came to 112,050 ozs. of fine gold, which produced a revenue of £477,404. Expenses at the mine were £271,134, and general expenses took £20,477, leaving the profit at £185,793. Actual value per ton treated was 46.505 shillings, and the costs 28.406 shillings, leaving a profit of 18.099 shillings. Sum brought forward was £31,823, and other items of income came to £8,064, bringing up the total to £225,600. From this two dividends of 15 per cent. each have been provided, profits tax took £16,072, and £26,507 remained to go forward. Payable ore reserves were re-estimated at the end of the year, and are now equal to 395,194 tons, an increase of 12,927. Cost of development of this excess tonnage has been debited to the working expenditure of the year, and the consulting engineer reports that the grade of ore has been well maintained, both in the stopes and in development. The reef has been proved over a considerable distance to the south of the longitudinal dyke, and the values in this section of the mine are described as very satisfactory. Depreciation on machinery, plant, buildings, etc., amounting to £28,693, is again charged to premiums on shares instead of to revenue, and reduces the account to £142,538.

Zinc Corporation.—In a very little while the preference shareholders of this unfortunate enterprise, the ordinary proprietors do not count nowadays, should be able to learn whether the money they put into the concern on such seemingly attractive terms is likely to prove a fortunate speculation. It appears that the Elmore plant, consisting of 16 units with an estimated capacity of 500 tons per day, is now rapidly approaching completion, and is expected to start work during the current month. It ought to have been ready before, but there have been the regulation delays, and it is good to hear that the cost will be within the original estimate. It will be remembered that future supplies of tailings under the contracts had been postponed until the beginning of this year in order to give time for the erection of the new plant. Had this been ready at the time expected production would have commenced before the first instalments of payments for these tailings fell due, but as the plant was not complete the directors have again arranged a postponement until July 1. In this matter the company has been very well treated. Nevertheless it could do with a little more money. The company will probably start operations with about £10,000 in hand, but the directors say how nice it would be were this amount larger. Of the preference share issue, amounting to 182,000 shares, 76,000 were subscribed by the shareholders, 28,000 were taken by the underwriters and about 4,000 were subsequently placed. This leaves 74,000 unissued, and subscriptions are invited for half this number, applicants to have the option to subscribe at par for one additional share for each one now taken during the next six months. The extra inducement is offered because the preference shares are quoted in the market below par. It may be remarked that these shares get the whole of the profits until dividends aggregating 100 per cent. are paid, and then a preferential 20 per cent. per annum with a right to participate *pro rata* with ordinary shareholders in any surplus distributed. Dividends are cumulative, and the shares, which also enjoy capital priority, carry three votes each.

Nickel Corporation.—This is one of the ill-fated ventures promoted by the notorious Whitaker Wright, through the London and Globe Finance Corporation, and we greatly fear that the position of affairs is about as bad as it can possibly be. The report made up to March 31, 1907, is a very brief affair, and tells us that during the period covered by the accounts the debt owing to the International Nickel Company of New York, from whom the properties were bought for £630,000 cash, on current account was reduced by £25,098, but the sum due to them on mortgage was increased by £1,689, on account of interest charges. It is further stated that "full particulars as to the company's indebtedness up to the present time and position of affairs at the mines will be given at the annual meeting." This gathering took place on Tuesday, but representatives of the newspapers were refused admission, and it is pretty safe to assume that there was nothing very encouraging to impart. In fact, the report goes so far as to tell us that a thorough examination of the company's properties in New Caledonia has been re-

cently made by the corporation's engineers, and in accordance with their report a number of claims has been abandoned as worthless, which will result in a considerable saving to the company in the annual taxes payable. With this information all shareholders unable to attend the meeting must be content unless an official report of the proceedings is sent to them. Gross profit on ore shipments for the year was £21,031, and a couple of pounds came in from transfer fees, but the expenses in New Caledonia were £11,932, those in London £2,143, including £1,000 for the three directors, interest took another £4,250, and £8,883 was allowed for depreciation of buildings and equipment. Altogether then the outgo was £27,213, and produces a debit of £6,182 to be added to that already existing, making the total revenue deficiency £167,254. It should be noted that at the end of March the debit was £188,515, but £27,444 came in as profit on sale of shares in sundry companies. Property account has a book value of £593,628, and what the company calls its current assets amount to £39,440 against floating liabilities of £63,473.

Australian Smelting Company.—There is evidently just a chance that reconstruction of this unfortunate concern may be avoided after all. The scheme involving an assessment of 5s. in the £ was agreed to at a meeting held on the 2nd of last month, but a circular just issued by the company is to the effect that the directors have decided to defer proceeding with it at present. Negotiations for providing the capital necessary to complete the works have taken a more favourable turn, and the terms proposed, if the arrangement is carried through, would provide a large sum of money without calling upon the shareholders. This would permit not only the completion of the works, but their extension on a much larger scale than has hitherto been contemplated. The directors promise to communicate with the shareholders again immediately matters are further advanced.

New Egyptian Company.—All things considered, this important undertaking issues a fairly satisfactory report for the year ended June 30 last, and it has been possible to give shareholders some return on their capital. The directors are satisfied with the condition of most of the agricultural lands acquired or in course of reclamation, but it was, perhaps, inevitable that the continuance of the acute financial crisis in Egypt, due to over-speculation in previous years, should render impossible any substantial realisations at present. The intrinsic value of the company's assets, mainly consisting of agricultural lands, is said to have been well maintained, and it is a fact that the crisis mainly affected town and suburban land speculations, leaving the agricultural areas, on which the prosperity of the country must necessarily depend, very little the worse. Profit on realisation of land and shares was £51,484, compared with only £19,991 in the previous year, but the rents from lands produced a nett sum of £3,978 only, against £7,314. This, however, is solely due to an alteration of the basis on which the figures are arrived at. Previously the rents have been taken for the whole of the agricultural season, irrespective of the date of the balance-sheet, but on the present occasion the more correct method has been adopted of crediting only the rent accrued to June 30. Had the former system been adhered to the revenue would have been larger by £4,675. Sundry other items increase the total income to £59,103, and after meeting expenses of all kinds the balance of nett profit comes to £44,966. From this the directors reserve £17,236 against profit not yet encashed on sales of land and building, leaving £27,730, which is raised to £57,092 by the balance of £30,262 brought forward. The dividend of 10 per cent. paid in May last, and described as an interim payment, absorbs £44,082, and entitles the directors and managing directors to extra remuneration of £9,918, besides the directors' fees of £2,500, so that the board and administrators do pretty well. The Soudan Development and Exploration Company, practically the whole of whose capital is possessed by this concern, is said to have made good progress, and the New Egyptian is also interested in the Menzaleh Canal and Navigation Company.

Golden Horseshoe Ore Reserves.—According to a cablegram received from the general manager, the ore reserves, being actual quantity of ore blocked out and in sight on December 31, were 1,062,332 tons containing 650,608 ozs. of gold. The figures are said to be taken on a conservative basis. Compared with the end of 1906 there is an increase of 69,465 tons in quantity but a decrease of 29,746 ozs. in the gold contents.

Critical Index to New Investments.

Bahia Blanca and North-Western Railway Co., Limited.

This company has power to issue 4 per cent. first debenture stock at the rate of £4,000 per mile of new line for the time being constructed or in course of construction, and is now offering £1,000,000 of the total amount authorised at the price of 95. The new stock will, as from May 30, 1908, when it will be fully paid up, rank *pari passu* with the £1,450,000 existing, and apart from a guarantee both as to principal and interest by the Buenos Ayres and Pacific Railway Company it is secured by a first charge on the undertaking. In addition to the line extending from Bahia Blanca to Toay, a further extension of 292 miles has been built from Nueva Roma to Huinca Renanco on the Buenos Ayres and Pacific Railway, and with other branches the company now owns 618 miles of railway in the Argentine Republic. The system is worked in conjunction with its own and those of the Great Western and Transandine companies by the Buenos Ayres and Pacific Company, which guarantees the principal and interest of the debenture stock, together with the dividend on the 4½ per cent. guaranteed stock, and a gradually increasing dividend on the ordinary stock. Including the receipts from the Great Western and Transandine companies the estimated increase in the gross takings from July 1, 1907, to February 1, 1908, is £224,504, and the stock should be a sound investment.

Metropolitan Railway Company.

The directors invite applications for £498,581 3½ per cent. "A" debenture stock at the price of 90, of which 5 per cent. is payable on application and the balance on March 2. The stock will rank *pari passu* with and form part of the existing "A" debenture stock, of which £750,414 is already quoted on the Stock Exchange. It is officially stated that the issue will not materially increase the company's interest obligations, as the proceeds will be mainly devoted to the repayment of the present overdraft. The stock yields £3 17s. 9d. per cent., and appears to be a fairly good security at the price.

Montreal Street Railway Company.

An issue of £460,000 4½ per cent. sterling debentures of this company was offered on Monday by the Bank of Montreal at the price of 96, and met with a very favourable reception, the lists being closed on the following day. The authorised capital is $18,000,000, of which half has been issued and paid up, and in addition to its system of 135 miles in the city of Montreal and subsurbs the company owns and controls all the other electric railways operating on the Island of Montreal, comprising a further 73½ miles. These new bonds rank with the existing $1,500,000 debentures as a charge upon all real estate, bonds and stocks of subsidiary companies now owned, and apart from certain first mortgage bonds for about £200,000 now outstanding, no mortgage can be created in priority to them. Of the proceeds of this issue about £60,000 will be applied in redeeming about £60,000 of the first mortgage bonds, and the balance will be used for the repayment of outstanding loans and for construction expenses during the current year. Particulars of gross and nett earnings from 1903 show a steady improvement year by year, and as a dividend of 10 per cent. per annum has been paid on the ordinary stock since 1898 the margin for the new issue is decidedly ample.

New York 4½ per Cent. Gold Bonds.

Messrs. Seligman Bros. announce that they have been authorised by the Comptroller of the City of New York to receive tenders for $47,000,000 in 50 year 4½ per cent. gold bonds and for $3,000,000 in 10 year 4½ per cent. gold bonds, making $50,000,000 or, say, £10,000,000 in all, to be issued at par in New York. A deposit of 2 per cent. must accompany the tenders sent in for these bonds, which must reach Messrs. Seligman at or before noon, February 14, and the whole amount allotted must be paid up within five days after the tender has been accepted. The recent New York price for the scrip was 108, but it has gone back to 106.

Claremont Municipal Loan.

Applications will be received by the Standard Bank of South Africa for £50,000 of 5 per cent. registered stock of this Municipality, which is offered at par. Of the proceeds £35,241 will be used to repay loans and overdraft at the bank, and £11,131 for street and stormwater works, &c., leaving £3,628 for contingencies and flotation expenses. The town of Claremont is a suburb of Cape Town, situated about six miles from that city, and connected with it by electric tram and train services. Its liabilities amount to £90,752, of which £30,830 is the balance of loans

raised from the Colonial Government at 4 per cent. and repayable by half-yearly instalments running until 1933. The town, however, is also jointly and severally liable with the Municipal Councils of Woodstock, Rondebosch, and Mowbray for £350,000 in connection with its one-fourth share in the Suburban Municipal Waterworks, on which the nett profit for 1906 amounted to £10,542. Its population has increased from 6,252 in 1891 to about 15,000, and the official valuation of properties liable to be rated is now £2,066,514 compared with £1,379,482 in 1903 and £600,000 in 1896. The principal municipal assets are valued at £63,415, and the revenue from rates and other sources is estimated at £36,336. This new issue ranks equally as regards security with existing loans, and is repayable at par on December 31, 1957, but may be redeemed at 105 at any time after December 31, 1912, on six months' notice.

NEXT WEEK'S MEETINGS.

Monday, February 10, 1908.

Dolores.—Salisbury House, noon.
London Produce Clearing House.—Commercial Sale Rooms, noon.
M. Oldroyd and Sons.—Dewsbury, 11 a.m.
National Gas Engine.—Ashton-under-Lyne, 3 p.m.

Tuesday, February 11.

Alhambra Company.—Alhambra Theatre, W., noon.
Ashton Bros.—Manchester, 3 p.m.
Bovril.—River Plate House, noon.
Bradbury, Greatorex and Co.—Aldermanbury, E.C., noon.
British Aluminium.—109, Queen Victoria Street, E.C., 11 a.m.
Burlington Hotels.—Buckingham Gate, S.W., 1 p.m.
City and South London Railway.—71, Finsbury-pavement, E.C., noon.
Colne Valley Water.—Charing Cross Hotel, noon.
El Oro Mining and Railway.—Winchester House, noon.
English Velvet and Cord Dyers.—Manchester, noon.
Espirito Santo and Caravellas Railway.—Winchester House, 2.30 p.m.
Guardian Investment Trust.—Winchester House, 11.30 a.m.
Kemball, Bishop and Co.—Winchester House, 2.30 p.m.
Liverpool Overhead Railway.—Liverpool, 3 p.m.
Matador Land and Cattle.—Dundee, 1 p.m.
National General Insurance.—Institute of Chartered Accountants, 2 p.m.
Scottish Reversionary.—Edinburgh, 3.30 p.m.
Somera Gold Mining.—Winchester House, 2.30 p.m.
Stamford, Spalding and Boston Banking.—Stamford, noon.
Taff Vale Railway.—Bristol, 2 p.m.
Tasmanian Smelting.—60, London Wall, E.C., 11 a.m.

Wednesday, February 12.

Anglo-Australian Assets.—Winchester House, noon.
Anglo-Australian Exploration.—6, Queen-street-place, noon.
Bengal Iron and Steel.—Winchester House, 11.30 a.m.
Bristol United Breweries.—Bristol, 3 p.m.
Browne and Eagle.—Institute of Chartered Accountants, noon.
Cardiff Railway.—22A, Queen Anne's-gate, S.W., 1 p.m.
German Bank of London.—34, Old Broad-street, E.C., noon.
Great Northern Railway (Ireland).—Dublin, noon.
Great Southern and Western Railway.—Dublin, 2 p.m.
Hull and Barnsley Railway.—Winchester House, noon.
Mercantile Steamship.—70, Bishopsgate-street, E.C., 2 p.m.
Metropolitan District Railway.—Westminster Palace Hotel, noon.
North Metropolitan Tramways.—101, Finsbury-pavement, E.C., noon.
Power Gas.—Westminster Palace Hotel, noon.
South Metropolitan Gas.—Victoria Embankment, 2 p.m.

Thursday, February 13.

Alliance Association.—4, Bartholomew-lane, E.C., 12.45 p.m.
Belfast and County Down Railway, Belfast. 11.30 a.m.
Brush Electrical Engineering.—Salisbury House, 11.30 a.m.
Commercial, Industrial, and Land of Egypt.—Salisbury House, noon.
London and Lancashire Fire Insurance.—Liverpool, noon.
London and Provincial Marine and General Insurance.—Winchester House, 12.30 p.m.
London Asiatic Rubber and Produce.—London Chamber of Commerce, noon.
Manchester Ship Canal.—Manchester, 11 a.m.
Milwaukee and Chicago Breweries.—Winchester House, 12.15 p.m.
Mines and General Trust.—Cannon Street Hotel, noon.
Moss Empires.—Edinburgh, noon.
Red Hill (W.A.) Gold Mines.—Cannon Street Hotel, 2.30 p.m.
Rock Life Assurance.—15, New Bridge-street, E.C., noon.

Total	£15,713,000

Treasury, February 4, 1908.

MINING RETURNS.

Angelo.—Milled 30,000 tons, 13,242 ozs.; £56,248. Profit, £27,544.

Ashanti Goldfields Corporation.—Obuasi plant—Crushed 4,318 tons; total, 2,943 ozs., value £12,509.

Ashanti Rivers.—400 ozs., value £1,600.

Associated of Western Australia.—Treated 10,054 tons, £20,646.

Associated Northern Blocks.—Milled 3,736 tons, treated 1,205 tons of slimes; £11,698 sterling

Balaghat.—4,700 tons, 2,314 ozs.; tailings, 4,368 tons, 326 ozs. Total 2,640 ozs.

Barrett Gold.—377 ozs., profit £300.

Briseis Tin.—Shipped 14 tons, including 11 tons for New Brothers Home No. 1 Company.

Broken Hill South Silver.—12,052 tons produced 1,954 tons of concentrates, containing 1,446 tons lead and 37,126 ozs. silver.

Broomassie.—Crushed 1,964 tons, 1,851 ozs.; value, £7,182; and 24⅝ tons of concentrates, value £35 1s. per ton; total, £8,045.

Cason.—Milled 34,000 tons, 14,007 ozs.

Champion Reef.—14,524 tons, 7,978 ozs.; tailings, 18,337 tons, 2,351 ozs.; total, 10,329 ozs.

Chillagoe.—Chillagoe: 25 tons lead ore. Mungana: 2,171 tons lead ore; purchased 211 tons lead ore; total, 2,407 tons lead ore, producing 410 tons lead bullion, containing 410 tons lead and 27,454 ozs. silver. In addition copper matte and lead furnace matte containing 485 tons of copper and 50,043 ozs. silver allowed to accumulate for treatment at the new copper converter plant.

Chinese Engineering.—Output, 17,000 tons; sales, 16,500 tons; consumption, 2,950 tons.

Day Dawn P.C. Gold.—From New Dawn Reef 315 tons, 307 ozs.; value, £1,105, exclusive of concentrates and residues.

Dharwar Reefs.—Crushed 1,150 tons, produced 569 ozs.

Driefontein.—Milled 29,500 tons, 11,199 ozs.; profit, £19,530.

Duff Development.—The Prospecting Dredge, 41 ozs.; No. 1 Dredge, 55 ozs.; No. 2 Dredge, 22 ozs.; total, 118 ozs.

Eldorado Banket.—Crushed 2,900 tons, 1,390 ozs.; cyanided 2,900 tons, 310 ozs.; total, 1,700 ozs.; profit, £4,070.

Ferreira Deep.—Crushed 29,850 tons, 12,296 ozs.; treated by cyanide 27,645 tons; 4,603 ozs.; total, 16,899 ozs.; profit, £40,050. Gold in reserve, 5,139 ozs.

Gaika.—846 ozs. from 2,662 tons crushed, value £3,259; 225 ozs. from 2,179 tons tailing, value £860.

Geldenhuis Deep.—Crushed 32,500 tons, 7,935 ozs.; treated by cyanide 31,496 tons, 3,381 ozs.; total, 11,316 ozs.; profit, £16,500. Gold in reserve, 4,212 ozs.

Giant Mines of Rhodesia.—Treated 4,892 tons, 2,525 ozs.; profit £5,550.

Glynn's Lydenburg.—Crushed 2,642 tons, 585 ozs.; cyanide 1,824 tons, 698 ozs.; slimes 818 tons, 378 ozs.; total 1,661 ozs.; value £7,056.

Golden Pole Gold.—Crushed 1,375 tons, 645 ozs.; 1,520 tons of sands and eight tons of concentrates treated 279 ozs.; total 924 ozs.; worth £3,399.

Great Fingall.—Treated 22,204 tons, 5,059 ozs.; tailings, 21,762 tons, 1,473 ozs.; concentrates 442 tons, 1,719 ozs.; total 8,251 ozs.; value £35,068.

Hutti (Nizam's).—Crushed 2,300 tons, 909 ozs.; tailings treated 2,100 tons, 214 ozs.; total 1,123 ozs.

Jumpers Deep.—Crushed 19,776 tons, 5,167 ozs.; treated by cyanide 18,921 tons, 1,661 ozs.; total, 6,828 ozs. Profit, £4,000. Gold in reserve, 2,621 ozs.

Kalgurli.—10,870 tons, 7,166 ozs.; value, £30,425.

Koffyfontein.—6,400 carats of diamonds recovered.

Komata Reefs.—Crushed 2,100 tons; £2,278.

Le Roi No. 2.—Josie Mine—Shipped, 2,711 tons; receipts $70,827 (£14,603). Vancouver Mine—Shipped, 217 tons; receipts are $16,298 (£3,360), being payment for 278 tons shipped, including $3,324 (£685) for lead ore shipped; zinc shipments, 1,316 tons; receipts, $9,804 (£2,021).

Lancaster West.—Crushed 6,630 tons, 1,301 ozs.; cyanide 5,614 tons, 871 ozs.; total, 2,172 ozs.; profit, £2,446.

Langlaagte Deep.—Crushed 32,261 tons, 8,247 ozs.; treated by cyanide, 32,553 tons, 3,378 ozs.; total, 11,625 ozs.; profit, £13,000. Gold in reserve, 6,245 ozs.

Lloyd Copper.—Treated, 4,475 tons for 126 tons copper.

Mertons Reward Gold.—Crushed 650 tons, 206 ozs.; sands, 574 tons, 102 ozs.; slimes, 228 tons, 29 ozs.; total, 337 ozs.; value, £1,430.

Meyer and Charlton.—Crushed 13,150 tons, 1,953 ozs.; cyanide, 2,998 ozs.; total, 4,951 ozs.; profit, £8,296.

Mount Boppy.—5,200 tons, 1,126 ozs.; cyanide, 3,309 tons, 1,307 ozs.; slimes, 1,887 tons, 837 ozs.; concentrates, 17 tons, 140 ozs.; total, 3,410 ozs.

Mount Lyell.—30,191 tons treated, addition to 1,357 tons of purchased ore and metal bearing fluxes. Converters produced 561 tons blister copper containing—copper, 554 tons; silver, 46,511 ozs.; gold, 1,546 ozs.

Myalls and Peak Hill.—For December 3,190 tons treated, 475 ozs.; profit, £196.

Mysore.—16,510 tons, 15,433 ozs.; tailings 15,470 tons, 1,986 ozs.; total, 17,419 ozs.

Mysore West, Mysore-Wynaad.—Cyanide 2,496 tons, 297 ozs.

New Comet.—Milled, 24,600 tons, 8,542 ozs.; profit, £11,778.

New Goch.—Crushed 22,490 tons, 4,923 ozs.; from cyanide 2,346 ozs.; total, 7,269 ozs.; profit, £11,204.

New Heriot.—Crushed 9,530 tons, 4,464 ozs.; profit, £7,304.

New Hillgrove.—Hillgrove: Crushed 220 tons, 502 ozs. Eleanora: 750 tons, £1,925; value, £3,707.

New Vaal River Diamond.—The diamonds registered by the diggers on the Vaal River Estate amounted to £2,050.

Nigel.—Crushed 10,500 tons, 4,433 ozs.; profit, £6,531.

North Broken Hill.—Treated 2,[illegible] tons, producing 406 tons concentrates, containing 283 tons 4 cwts. lead and 2,607 ozs. silver.

Nourse Mines.—Crushed 32,848 tons, 8,894 ozs.; treated by cyanide, 32,417 tons, 3,871 ozs.; total, 12,765 ozs.; profit, £18,000. gold in reserve, 4,186 ozs.

Nundydroog.—7,000 tons, 5,931 ozs.; tailings, 5,401 tons, 403 ozs.; total, 6,334 ozs.

Ooregum.—10,222 tons, 5,743 ozs.; tailings 9,266 tons, 994 ozs. gold; No. 3 stamp mill 150 ozs.; total, 6,887 ozs.

Oroya Brownhill.—Crushed 11,910 tons, 3,776 ozs.; value, £16,024.

Presta, Block A.—Crushed 7,200 tons, 2,903 ozs.; tailings, 4,626 tons, 941 ozs.; total, 3,844 ozs.; value, £14,010.

Roberts Victor Diamonds.—15,937 loads washed, producing 7,499¼ carats.

Queensland Copper.—Ore treated, 1,360 tons; production, 264 tons of matte, containing 146 tons fine copper; shipment, 363 tons matte; value, £13,500.

Roodepoort United.—Crushed 17,170 tons, 4,322 ozs.; from cyanide 2,325 ozs.; total, 6,647 ozs.; profit, £10,042.

Rose Deep.—Crushed 34,600 tons, 6,679 ozs.; treated by cyanide 35,137 tons, 3,847 ozs.; total, 10,526 ozs.; profit, £16,500; gold in reserve, 2,225 ozs.

St. John Del Rey.—Gold produce, £28,600; yield per ton, ·63 of an oz. troy.

Scottish Gympie Gold.—Crushed 6,700 tons, 1,800 ozs.

Selukwe Gold.—Crushed 6,229 tons, 2,057 ozs.; treated by cyanide 4,130 tons, 573 ozs.; total, 2,680 ozs.

Sheba.—Treated 7,000 tons, 1,960 ozs.

Sons of Gwalia.—Ore crushed 13,165 tons, 3,061 ozs.; tailings 7,345 tons, 1,032 ozs.; concentrates 214 tons, 468 ozs.; slimes 5,009 tons, 401 ozs.; total, 4,962 ozs.; value, £21,039.

Sutherland Reefs Proprietary Gold.—Milled 300 tons, 250 ozs.

Taquah.—Crushed 3,390 tons, 3,353 ozs.; tailings 4,488 tons, 568 ozs.; total, 3,921 ozs.; value, £16,050.

Tasmania Gold.—Crushed 6,788 tons, 2,536 ozs.; concentrates treated 218 tons, 307 ozs.; by cyanide 3,788 tons, 283 ozs.; total, 3,076 ozs.

Tasmanian Smelting.—Silver-lead bullion shipped contained 700 tons lead, 99,000 ozs. silver, and 313 ozs. gold.

Tolima.—70 tons, value £3,500; profit over £1,000.

Transvaal Gold Mining Estates.—Crushed 10,071 tons, 2,904 ozs.; total, 5,607 ozs.; value, £24,072.

Deposits against future queries may be lodged with the Publisher.

H. D. R.—There is just the chance that the delayed business may stimulate the market, but the outlook is otherwise less cheerful than we had hoped, and as the market generally is firm you had better perhaps cut the loss. (2) Perhaps, although the market has been jumping rather fast. (3) It looks as if months might elapse yet before the trouble you mention comes to a head, but the good stocks, such as you mention, should not be much affected. It is possible the bulk are now held on this side. The issue you refer to is guaranteed by another company, which is doing well.

Nil Desperandum.—We are inclined to endorse your opinion of these shares, though when improvement will come it is impossible to say. Still, as a speculative purchase, they offer some attraction.

D. H. C.—(1) This company is very dependent on its guarantor. Thanks to price-cutting and accepting of paper in part payment in lieu of cash, the foster concern will have considerable difficulty in pulling-round. There are, however, signs of some improvement in the industry, and your company has a fair business of its own. This should grow; meantime earnings in the last report were sufficient to cover debenture and preference interest, so we think you should keep for the present. (2) There has been a little recovery in this market, and it may continue, so it is hardly the time to sell. We have not seen the company's last report; if you have a copy we should like to see it. According to the last figures we have the position was not a strong one. (3) We see no reason to sell these just now, though the immediate outlook is not encouraging, and it will take considerable time for the company to recover itself. (4) There ought to be sufficient security for this issue, but we are not strongly impressed with the concern. We think you should be prepared to sell if you can get, say, about 85. (5) Dividends have shrunk considerably of late years, and the margin for your debentures is very small. If you can get about the current price we think you should sell. (6) Do not touch these, the company is in a bad way. (7) Receipts have fallen on shortness and lateness of crop, but the company is carefully managed, and we do not think you should sell now. Some improvement in trade is expected soon.

D. H. C. (second letter).—Naturally default would follow on the event mentioned. The issue you hold is a second charge, and the other is, therefore, the preferable as an investment, but the market view is that both may go up further. So you might not do much good by changing. It is expected that the Government scheme to acquire the undertaking will be completed shortly.

X. E. N.—(1) Your figures appear to be approximately correct, and if the company is being run in a straightforward way dividends should be forthcoming soon. The only visible point against the concern is the possibility of an increase in capital, but even this might be compensated by more extended working. (2) We do not like the position of this company at all, and think you have done well to dispose of your holdings. No doubt the deficiency as arrived at has been smothered by short loans, but these will have to be settled; meanwhile receipts show a large shrinkage.

Mithra.—(1) This company's concession is a short one—it has never done well, and the shares are of very doubtful value. (2) Probably more money will be raised. Recent returns show improvement, but the road is a long one for the shares. (3) As a speculative venture there seems to be a chance for these, but they must be watched. (4) This concern has been a little unlucky in its operations, but it should do better again, and the shares look a reasonable venture. (5) We dealt with this on November 2, and our analysis was not favourable—we do not think they are worth touching. (6) There are about six to seven years' arrears on the second preference, so dividend prospects are very dim. An improvement on the seconds might encourage speculative buying of the ordinary, otherwise they are not attractive. (7) About 5s.

E. J. T.—No; we fear the stock named is more likely to go down.

Grasmere.—(1) Yes; we think a few shares might be bought to average. (2) Here also a further purchase might be advisable as the price is rising. Both properties appear to possess much material if you can trust the news that comes from that part of the world. These answers leave you 1s. in our debt.

Francis.—(1) We are afraid this company has gone ahead too fast, and there is a danger that the property will pass into the debenture holders' hands. Better cut your loss. (2) There may not be any immediate recovery, but we should be inclined to hold these.

P. V. D.—There is a small advantage in accepting the new stock if you are a trustee, even if the dividend does not exceed the guaranteed rate.

H. H.—If you are a holder, we think you should not add to your risk, but we cannot recommend you to sell at present price. Earnings show a large decrease, but there are signs that there may be a change for the better soon. An improvement in earnings would probably give the market an upward turn.

F. E. D.—(1) Speculative and not very promising at that, as the margin behind the debenture interest is much too small. (2) This company did a little better in 1906-7, but its previous record was not very brilliant. On the basis of the past few years the return would be just over 4½ per cent., and the shares seem quite fully priced. (3) There is so little margin of revenue for this stock that we hesitate to recommend it, but any improvement in traffic receipts would make it jump. (4) Yes, that was the meaning of the wire. We think the new railway stock the cheaper and well secured. (5) There is no immediate cause to fear trouble, but we should sell at a profit.

Thanet.—Thanks for your remittance, of which we have put half to your credit on deposit account. Our rules are that each security constitutes one question, as it is impossible to give a satisfactory answer in any other way than by reference to actual circumstances in each case.

J. W. B.—The financial position is so feeble that a purchase would be a leap in the dark.

Letters to the Editor.

Sir,—In your last correction (February 1, 1908) you appear to say that Lloyds Bank "holds" Consols at 85. Would it not be more correct to say "held" (at December 31, 1906) at 85? The present reading appears to me rather misleading.

Yours faithfully,
C. Defferd.

Bank House, Tiverton, Devon,
February 4, 1908.

[We give it up.—Ed.]

INCOME-TAX OVERCHARGES.

Sir,—The Income-Tax Acts provide that no repayment can be made, save in certain quite exceptional cases, unless the claim is made within the time limited by the Acts. In many cases claims can now be made for four years, and April 5 next is the last possible day on which a claim for the year ended April 5, 1905, can be lodged. Claims for repayment can be made on various grounds in respect of income from all sources, even when said to be paid "free of income-tax," and we shall be happy to advise any of your readers, without charge, whether or not they can make a claim for repayment, on receiving full particulars of their incomes and a stamped envelope for reply.

Yours, &c.,
The Income-Tax Adjustment Agency, Limited,
E. Montague, Secretary.

Poultry, London, E.C.

Books Received.

The Law of Private Trading Partnership. By J. W. Smith, K.C., LL.D. (London, Effingham Wilson, 54, Threadneedle-street, E.C.) Price, 1s. 6d. nett.

The Law and Practice relating to the Formation of Companies (limited by shares) under the Companies Acts, 1862 to 1907. By Vale Nicholas. (London, Butterworth and Co., 11 and 12, Bell-yard, Temple Bar, E.C.)

Mining Manual, 1908. Edited by W. R. Skinner. (London 11-12, Clement's-lane, E.C.) Price 21s.

The Book Monthly for January has one article headed "Contraband," another, "Treasure Finders," and a third, "Suppressed," and from such headings one might expect contents sensational and lurid. But they are better than that. The first tells of the fate that befalls books that are "contraband to English copyright," and an interesting fate it is. How many, we wonder, of those who cross the high seas know what happens to their holiday literature? The second is again of books, a lively account by Mr. Tighe Hopkins of fakes and forgeries in manuscripts. The third calls to memory, or the lack of it, some book pictures that are now no more, gone under through devious and sometimes dubious ways. The Editor's letter is a further sign of the "times," and he tells an amusing story of the uncertainty that was rampant the paper's own office during the first days of the "Thunderbolt. "There is a story that one eminent there said to another eminent 'You've seen that in the *Observer* to-day, I suppose; we had better contradict it to-morrow.' 'I'm afraid not. I've just heard that it is well founded.'"

We are informed that Mr. Robert Barclay has resigned the chairmanship of Barclay, Perkins, and Co., Limited, and is succeeded by Mr. Edward W. Giffard, who for some years past has been managing director to the company. Mr. Barclay retains his seat on the board.

The London and South-Western Bank, Limited, will open a branch at No. 123, Mitcham Lane, Streatham, on Monday next, 10th inst., to be known as the West Streatham branch. The bank has recently opened a sub-branch at Wimbledon Broadway.

Messrs. J. Henry Schröder and Co. have received a cable from their Santos agents advising them that they have further encashed £20,900 in respect of the surtax collected weekly for the service of State of San Paulo 5 per cent. Exchequer Bonds, making a total of £595,400 encashed since August 1.

TRADE AND PRODUCE.

WHEAT.—The trade of the week has been very moderate, and prices have shown a good deal of irregularity. Futures till towards the end advanced daily, but at the last dropped to nearly the level of last week's closing prices. Holders of spot also occasionally demanded 1d. or 1½d. per cental more, but the liberal shipments had a bearish effect on the whole, and brought prices down towards the end of the week. Farmers delivered 80,095 qrs. of English wheat averaging 35s. against 84,370 qrs. averaging 26s. 3d. a year ago, the price offered in most places being a little less than last week. Imports continued on the increase, being this week 427,397 qrs. against 342,790 qrs. last week and 304,147 qrs. a year ago. The estimated quantities of wheat and flour on passage are also up this week to 3,570,000 qrs. against 3,340,000 last week to the United Kingdom and 1,420,000 qrs. against 1,290,000 a year ago. American markets opened with a better tone, and on Tuesday advanced 1c. to 1¾c., Bradstreet's weekly estimates of 64,884,000 bushels in sight East of the Rockies against 66,267,000 last week, being less than was expected. A reaction set in on Wednesday on considerable profit taking, and later prices fluctuated a good deal.

WOOL.—The present series of London wool sales closes to-day, and the values to which the raw material has risen or fallen is by now decided. Messrs. Jacomb, Son and Co's notes on the sale give the superior merino descriptions as having been keenly competed for, especially greasy sorts, and the average closing rates are 5 per cent. in advance of the last series. Medium sorts remain firm, but inferior and faulty grades have declined from 5 to 7½ per cent. Fine crossbreds maintain about opening rates, but medium and coarse descriptions have met with a dull market at a reduction of from 5 to 10 per cent. Bradford market has been very quiet, and prices of medium crossbreds have fallen almost as low as they were towards the end of last year. Fine crossbreds are fairly steady and merinos also, but there is practically no business passing. New orders are not coming in from the Continent, for demand there is for the time being satisfied. In home-grown wools there is less if anything doing than in colonial. Spinners and manufacturers are both busy, though the latter are disappointed that spring orders are not coming to hand more freely.

COTTON (from our Manchester correspondent).—We have experienced a decidedly quiet market throughout the past week, and strength is being lost in most directions. Small sales here and there have occurred which, in some cases, have been forced owing to producers being compelled to sell. The fluctuations in the price of raw cotton at the present time are not of much interest. Values in yarn and cloth are drooping, and there is some concern at the poor state of affairs as compared with a few months ago. Both spinners and manufacturers are doing much worse than at the beginning of the year, and no relief seems to be in sight. There has not been much doing in piece goods for any market. Hope is expressed in some quarters that after the New Year holidays in China more business will be available, but at the moment offers cannot be entertained. Stocks are not heavy in Shanghai, and in the opinion of some authorities replacements are now required. India business, on the whole, has been quiet, but towards the close of the week rather more inquiry has come through in fine goods made from Egyptian yarns. Prices are easier in these cloths, and some orders have been helped through. Here and there a shipper to the Levant has shown a little more life, but the turnover for the Mediterranean markets is disappointing. Various accounts are given of the prospects for South America, but there has not been much buying this week. There is a lack of confidence in most quarters, and home trade business has been confined to sorting up lots. Rumours have been current of manufacturers being in financial difficulties, and it is feared that trouble is ahead if the demand from abroad does not improve. American yarns for home consumption have moved off very slowly. Users are declining to take deliveries against old contracts. The all-round supply is increasing, especially in twists. Ring yarn is not so firmly held as some time back. Margins for the most part are slipping away. There has been no business worth mentioning in export descriptions. Two-fold yarns have been inactive, and doublers are being compelled to curtail their production. Bolton spinnings have been very slack with a weak tone. Prices are lower than seven days ago, but there has not been much business offering of any character. The fact that some producers are turning on to American cotton tells its own tale.

COAL.—The business of house coal keeps steady, but steams have generally fallen away in both quantity and price. Shipments from Scotland show a decrease of 52,000 tons compared with the preceding week, and prices are reduced about 6d. to 1s. per ton. Demand for manufacturing qualities is lessening all round. Steamers are doing a good business still at the Humber ports and values keep firm, while Welsh prices keep much about the same to a slight decline. Coalowners in Wales, according to the *Engineer*, seem to think that though prompt trade is slack future business is hopeful, and there is a good deal of eagerness to enter for future bookings.

COPPER.—Prompt and forward metal dropped about 15s. at the start this week, owing to the dull demand and depressing influences from New York. Prices here fluctuated more or less narrowly from day to day, and Thursday's close was just about the same as a week ago, £61 10s. cash and £62 three months; but to-day sellers rather predominated, and the final figures were £61 5s. and £61 12s. 6d. Messrs. H. R. Merton and Co. give the visible supply as 20,660 tons against 19,710 tons a month ago. Total supplies amount to 46,580 tons and deliveries to 45,630, compared with 50,925 tons and 47,004 tons respectively for December. Stocks in England and France amount to 13,450 tons against 13,060 tons on December 31, and the total afloat total 3,000 tons.

TIN.—The market has been very active, and prices through fluctuating a good deal have risen considerably on the week under the influence of much speculative operating. [illegible] Wednesday showed the greatest reaction, forward metal dropping from £131 to £129 and cash to £128 15s., but Thursday's close saw them up again at £130 2s. 6d. cash and £131 15s. three months, and to-day a further advance to £130 10s. and £131 15s. was recorded.

IRON AND STEEL.—Demand for hematite iron continues to decrease, and the future outlook to become less and less cheerful. Prices have again fallen this week, and production will have to be further curtailed. The business of Cleveland pig-iron, on the other hand, has improved a little. Consumers have come into the market more freely, Connal's stores have had to report a decrease instead of the increase that has occurred of late, and one of the most encouraging signs of all is that buyers have been willing to pay as much for forward as for prompt metal, which seems to indicate that prices have touched their lowest for the present season. Steel remains quiet and weak in almost all classes except where shipbuilding material is concerned.

TEA.—Messrs. Gow, Wilson and Stanton think that the offerings of Indian tea from now on to the end of June will be rather lighter than for the corresponding period of last year. The Ceylon crop for 1907 shows an increase of twelve millions, exports to the United Kingdom being six millions over those of the previous years. There was a further large expansion in the total taken by Russia. This week's Indian auction was rather irregular for teas about 7¾d., but good and fine sorts met with very fair inquiry, and occasionally higher rates were paid, particularly where quality showed any improvement. 38,505 packages were brought forward, of which 37,376 packages were sold on garden account, averaging 8.30d. against 34,620 packages averaging 8.09d. a year ago. Ceylon exports for January have been telegraphed at ten millions against an original estimate of nine to nine and a-half millions, and so near is supply to demand that even this comparatively small increase was enough to cause an easier feeling in the market. 24,864 packages were offered, and teas of an ordinary quality about 7¾d. were occasionally weaker. A few parcels of good quality, on the other hand, showed a decided advance, the average for the week coming to 8.03d. against 8.04 in 1907. In Java teas there was less inquiry for those below 8d., and in spite of the small sale of 2,537 packages prices were occasionally easier.

SUGAR.—The market was firm in anticipation of short Cuban receipts, says Mr. Czarnikow, and May prices fluctuated little between 10s. 2¾d. and 10s. 3d., a slight reaction coming in at the close, due to Cuban arrivals being rather in excess of expectations. A temporary slight uneasiness was caused by discussions in Berlin, where the Parliamentary Commission will only agree to the ratification of the Convention in its present form, provided the German excise is simultaneously reduced from 14 to 10 marks, but the Government finds itself unable to do so for lack of funds at present, and a motion to reduce the excise on October 1, 1909, is now being discussed. A delay of 14 days from February 1 has been granted to Germany for ratifying the Convention, and it is hoped that everything will ultimately be arranged. There are now in refiners' and second hands 905,000 against 807,500 tons, whilst it would be a more reassuring feature if the sugar were still in first hands. Continental February figures are to hand from Austria only, where production was 29,000 against 29,000, exports 21,400 against 28,000, consumption 37,500 against 32,500 tons. The German exports are only 36,000 against 36,000 tons raw, and 27,700 against 42,900 tons refined. The U.K. consumption will probably be fully up to last year's, though imports of raw beet are 16,000 tons less. Last week's Hamburg raw exports are said to be only 50 tons, which seems incredible. The Hamburg stocks decreased 44,000 against 25,000 tons in February. Granulated in Hamburg continues scarce and improved 1½d., enabling refiners to sell at previous prices, and raws remained firm, 88 per cent. selling at 10s. and 80 per cent. seconds at 8s. 6d. The American market first declined to 3.75 cents for 96 per cent. Centrifugals and then remained firm, doubtless under the influence of Cuban advices. 41,000 tons were landed in the three ports during the week. Meltings were 20,000 tons and stocks increased to 93,000 tons.

PARR'S BANK.—Liabilities on current and deposit accounts, &c., on January 30 amounted to £28,227,202, and on drafts current, acceptances on behalf of customers, &c., to £4,172,700, against which cash in hand and at Bank of England stood at £6,247,244, money at call and short notice £6,873,308, Government and other first-class securities £3,432,213, bills of exchange £2,285,601, and loans and advances to customers £14,172,981.

An advisory committee, consisting of Messrs. Edwin Waterhouse (chairman), Spencer Phillips, Marlborough Pryor, Thomas Skinner, and John Akroyd, with Mr. Lynden Macassey as secretary, has been formed for the purpose of considering, in conjunction with the board and Messrs. Speyer, a scheme dealing with the profit-sharing secured notes and the financial requirements of the Underground Electric Railways Company of London, Limited. A similar committee has been constituted in Amsterdam, and it is understood that one is also being formed in New York. The board, therefore, hopes to be able to publish the scheme at an early date.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for the week ended Jan. 21, $3,573, increase $703; aggregate from July 1, $147,461, increase $43,493.

Argentine North Eastern. — Traffic receipts for week ended January 3, £2,792, decrease £514; aggregate from July 1, £79,633, decrease £6,812.

Assam Bengal.—Traffic receipts for 10 days ended December 31, Rs. 1,08,016, increase Rs. 2,143; aggregate from July 1, Rs. 25,08,841, increase Rs. 1,39,472.

Bilbao River and Cantabrian.—Traffic returns for January, £7,706, decrease £3,477; aggregate from January 1, £7,706, decrease £3,477.

Buenos Ayres Central.—Gross receipts for December £9,952, decrease £1,355; aggregate from Jan. 1, £132,935, increase £10,966.

Canadian Northern Railway.—Traffic receipts for 10 days ended Jan. 31, $163,400, increase $72,500; total from July 1, $5,886,100, increase $1,618,600.

Egyptian Delta.—Traffic receipts for week ended January 18, £4,738, decrease £29; aggregate from January 1, £221,676, increase £17,930.

Lucknow Bareilly Railway.—Traffic receipts for 10 days ended December 31, Rs. 61,042, increase Rs. 707; aggregate from July 1, Rs. 7,16,312, increase Rs. 7,943.

Midland Uruguay.—Receipts for month of December, £6,808, decrease £564; aggregate from July 1, £37,185, increase £2,570.

North Western of Uruguay.—Traffic receipts for Dec., $17,600, decrease $3,304; aggregate from July 1, $121,864, increase $22.

Quebec Central Railway.—Traffic receipts for the 4th week of January, $27,246, increase $7,018; aggregate from January 1, $68,781, increase $13,998.

Quebec and Lake St. John.—Traffic receipts for Dec. $58,375, increase $6,111, aggregate receipts $658,636, increase $60,714.

Rohilkund and Kumaon Railway.—Traffic receipts for 10 days ended December 31, Rs. 32,306, increase Rs. 1,088; aggregate from July 1, Rs. 5,70,286, increase Rs. 44,779.

Uruguay Northern.—Gross receipts for month of Oct., £2,235, increase £923; aggregate from July 1, £7,502, increase £802.

White Pass and Yukon Railway.—Traffic receipts for week ended January 31 amounted to $1,700.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending February 1, £1,124, decrease £303; aggregate from January 1, £4,687, decrease £1,762.

Cockermouth and Keswick Railway.—Receipts for week ending February 1, £641, decrease £47; aggregate from January 1, £3,151, decrease £253.

East London Railway.—Traffic receipts for November, £3,650, decrease £749.

East and West Yorkshire Union Railways.—Traffic receipts for week ended February 1, £454, increase £7; aggregate from January 1, £2,187, increase £33.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending January 29, £562, decrease £25; aggregate from Jan. 1, £2,218, decrease £306.

Blessington and Poulaphouca.—Traffic receipts for week ending January 29, £6; aggregate from January 1, £23, decrease £5.

Bristol Tramways and Carriage.—Traffic receipts for week ending January 31, £4,504, increase £133; aggregate from Jan. 1, £22,721, decrease £27.

British Electric Traction.—Receipts of all the Associated Companies for the week ending January 31, £26,053; 428½ miles.

Burnley Corporation.—Traffic receipts for week ending February 1, £1,103, increase £53; aggregate from January 1, £5,824, increase £159.

Dublin and Blessington.—Traffic receipts for week ending January 29, £89, increase £4; aggregate from January 1, £383, decrease £15.

Dublin and Lucan.—Traffic receipts for week ending January 31, £89, increase £2; aggregate from Jan. 1, £391, decrease £11.

Dublin United.—Traffic receipts for week ending January 31, £4,551, increase £150; aggregate from Jan. 1, £20,687, increase £134.

Edinburgh and District.—Traffic receipts for week ending December 28, £4,918, increase £542; aggregate from January 1, 1907, £257,110, increase £2,644.

Hastings and District.—Traffic receipts for week ending January 30, £650; increase £17.

Isle of Thanet.—Traffic receipts for week ending February 1, £206, increase £14; aggregate from Oct. 1, £4,893, increase £103.

London County Council.—Traffic receipts for week ending January 25, £28,211, increase £4,154; aggregate from April 1, £1,340,885, increase £217,879. Miles 115¾, against 114.

London General Omnibus.—Traffic receipts for week ending February 1, £17,237, increase £391; aggregate from Jan. 1, £84,527, decrease £5,731.

London Road Car.—Traffic receipts for week ending February 1, £6,738, increase £509; aggregate from Jan. 1, £29,379, decrease £4,983.

London United.—Traffic receipts for week ending February 1, £5,162, increase £405; aggregate from January 1, £22,569, decrease £1,048.

Provincial Trams.—Traffic receipts for week ending February 1, £1,348, increase £66; aggregate from Oct. 1, £26,382, increase £1,048.

Rossendale Valley.—Traffic receipts for week ending January 24, £173, increase £5.

Sunderland District.—Traffic receipts for week ending Jan. 29, £439, increase £73; aggregate for 13 weeks £5,893, increase £938.

Yorkshire (West Riding) Electric.— Traffic receipts for week ending February 2, £1,078, increase £166; aggregate from January 1, £5,092.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending February 4, £17,823, increase £5,536; aggregate from January 1, £88,719, increase £14,588.

Auckland Electric.—Traffic receipts for 25 days ending December 31, £11,367, increase £1,554; aggregate from January 1, £137,719, increase £8,019.

Brisbane. — Traffic receipts for month of January, £14,340 increase £1,875.

British Columbia Electric.—Nett earnings for December $83,808, increase $22,878. Aggregate nett earnings, including income from investments from July 1 to Dec. 31, $502,320, increase $141,546.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for 7 days ending February 4, £7,642, increase £993.

Calcutta. — Traffic receipts for week ending February 1, Rs. 52,916, decrease Rs. 2,517; aggregate from January 1, Rs. 2,53,212, decrease Rs. 48,139.

Cape Electric.—Traffic revenue for month of December, Cape Town, £11,679; Port Elizabeth, £3,751.

Carthagena and Herrerias.—Traffic receipts for the month of January, £2,493, decrease £3,106; total from January 1, £2,493, decrease £3,106.

Geneva Trams.—Earnings for December, fr. 189,275; increase fr. 9,122.

Kalgoorlie Electric.— Gross receipts for December, £4,109; aggregate from January 1, £47,824.

Lisbon Electric.—Earnings for November, milreis 46,117

Madras Electric.—Traffic receipts for fortnight ended January 31, Rs. 19,961, increase 13¼ per cent.; aggregate from January 1, Rs. 39,646, increase 13¾ per cent.

Melbourne Tramways and Omnibus. — Traffic receipts for January, £51,500.

Mexico.—Nett earnings for month of December, $208,386, increase $49,715; aggregate nett earnings from January 1, $2,163,490, increase $263,819.

Perth (W.A.) Electric. — Gross receipts for week ended January 31, £1,490, decrease £72; aggregate from January 1, £6,754, decrease £567.

Rio de Janeiro.—Nett earnings for December, $231,793; increase $70,793; aggregate from January 1, $2,183,759.

Sao Paulo.—Traffic returns for December: nett earnings, $124,520, increase $5,520; aggregate from Jan. 1, $1,352,306. increase $59,047.

Twin City Rapid.—Traffic receipts for the month of November, $497,428, increase $38,791; aggregate from January 1, $5,552,879, increase $402,984. Nett traffic receipts, $233,018, decrease $649; aggregate from January 1, $2,852,445, increase $105,004.

This Prospectus has been filed with the Registrar of Joint Stock Companies.

The LIST will CLOSE on or before TUESDAY, the 11th February, 1908.

THE BAHIA BLANCA AND NORTH WESTERN RAILWAY COMPANY, LIMITED.

(Incorporated under the Companies Acts, 1862 to 1900.)

SHARE CAPITAL (ISSUED).

£1,350,000 Guaranteed Stock: £1,250,000 4½ per Cent. Guaranteed Stock.

DEBENTURE CAPITAL.

Four per Cent. First Debenture Stock. Issued £1,450,000.

Authority has been given for the Issue of Four per Cent. First Debenture Stock at the rate of £4,000 per mile of new line of the Company for the time being constructed or in course of construction, or about to be constructed, in connection with the existing line of the Company, and to the application of the proceeds of the said Debenture Stock to the construction of such new lines, and for other Capital purposes of the Company.

ISSUE OF £1,000,000 FOUR PER CENT. FIRST DEBENTURE STOCK AT £95 PER CENT.

Part of the total amount authorised as above mentioned, and guaranteed both as to principal and interest by the Buenos Ayres and Pacific Railway Company, Limited, payable as follows:—

£5 on Application, £30 on Allotment, £20 on 19th March, 1908, £20 on 21st April, 1908, £20 on 30th May, 1908—total, £95 per £100 Stock.

Bearer scrip will be issued to be exchanged for Debenture Stock Certificates on completion of all the payments, the Stock being transferable in amounts not involving a fraction of £1.

The Interest is payable by warrant to the Registered Holders of the Stock on 1st April and 1st October in each year.

The first payment of interest, calculated on the instalments as due, will be made on the 1st October, 1908, and will amount to £2 per £100 Stock.

Payment in full may be made on Allotment or on the Instalment dates under discount at the rate of 4 per cent. per annum.

THE DIRECTORS OF THE BAHIA BLANCA AND NORTH WESTERN RAILWAY COMPANY, LIMITED, have authorised the London Joint Stock Bank, Limited, and Martin's Bank, Limited, as Bankers of the Company, to receive applications for £1,000,000 Four per cent. First Debenture Stock of the Company.

The Stock will, as from 30th May, 1908, rank *pari passu* with the existing issue of £1,450,000. It is guaranteed both as to principal and interest by the Buenos Ayres and Pacific Railway Company, Limited, and is also secured by a first charge upon the undertaking of the Company under a Trust Deed, dated 2nd July, 1896, and Deeds supplemental thereto, dated 5th July, 1897, 2nd December, 1901, and 23rd August, 1904.

The Company may purchase any Debenture Stock either by Tender or in the Market, or pay off the whole or any part of the Debenture Stock, on six calendar months' notice, at 105 per cent.

The Buenos Ayres and Pacific Railway Company, Limited, works this Company's system, and is entitled to the gross receipts of the undertaking in consideration of a guarantee of (1) this Company's present and future Debenture Stock, (2) a dividend of 4½ per cent. per annum on the Four-and-a-half per cent. Guaranteed Stock, and (3) the following dividends on the Guaranteed Stock, viz.:—3 per cent. per annum for five years from 1st July, 1904; 3½ per cent. per annum for the next four years; 4 per cent. per annum for the next four years; 4½ per cent. per annum thereafter. The margin of the income of the Buenos Ayres and Pacific Railway Company, Limited, last year after payment of the Interest on its Debenture Stocks, and including amounts payable under the Agreements for working this Company's Railway and that of the Villa Maria and Rufino Company was £498,000. All the Debenture Stocks and Share Capital of the Buenos Ayres and Pacific Railway Company, Limited, are quoted at a premium; the Reserve Funds at the 30th June, 1907, standing at £844,282 6s. 3d.

As from the 1st July, 1907, the Buenos Ayres and Pacific Railway Company, Limited, has taken over the working of the Argentine Great Western Railway Company, Limited, and the Argentine Transandine Railway Company, Limited, under Agreements with those Companies dated respectively the 23rd April, 1907, and 16th July, 1907.

After including, for the purposes of comparison, the receipts of the Argentine Great Western and Transandine Railways in the figures for the corresponding period of last year, the estimated increase from 1st July, 1907, to 1st February, 1908, in the gross receipts of the whole system owned and worked by the Buenos Ayres and Pacific Railway Company, Limited, is £224,504.

In addition to the line of railway extending from the town of Bahia Blanca in a north-westerly direction to Toay, with certain branch connections in the town of Bahia Blanca itself, a further extension 292 miles in length, has been constructed for account of the Company, from Nueva Roma, a station on the original line, to Huinca Renanco, a station on the Buena Esperanza Branch of the Buenos Ayres and Pacific Railway, thus connecting the two systems; and in February, 1907, a section of the Remeco branch, 32 miles in length, lying to the West of the Nueva Roma to Huinca Renanco extension was purchased from the Buenos Ayres Great Southern Railway Company, Limited. The Rivera-Salliquelo branch, and 23 miles of the Macachin branch have also recently been opened, and the Company now owns 618 miles of broad gauge (5 ft. 6 in.) railway in the Argentine Republic.

The Company has the power, under the Concession Law authorising the construction of the line from Nueva Roma to Huinca Renanco, to build branches from that line not exceeding 75 kilometres (46 miles) each, and 47 miles of such branch lines are under construction whilst surveys are made and plans are in course of preparation for a further 68 miles.

The gross receipts of the Company for the past four years compare as under:—

Year ending 30th June, 1904	£85,943
Year ending 30th June, 1905	124,874
Year ending 30th June, 1906	166,400
Year ending 30th June, 1907	269,789

and the gross receipts from 1st July, 1907, to 1st February, 1908, show over the corresponding period of last year an estimated increase of £99,537, which should be considerably augmented by 30th June, 1908.

The latest cables state that the wheat crop is the best on record and has been harvested in excellent condition, being more than double the quantity of last year in the district served by this Company.

The proceeds of the present Issue will be appropriated towards payment of the construction and equipment of the new lines, to the purchase of additional Locomotives and Rolling Stock, and for the general capital requirements of the Railway.

Applications on the form accompanying this Prospectus, together with the deposit of £5 per cent., should be forwarded to the London Joint Stock Bank, Limited, 5, Princes Street, London, E.C., or to Martin's Bank, Limited, 68, Lombard Street, London, E.C.

If no allotment is made the deposit will be returned without deduction. Should a smaller amount be allotted than applied for, the surplus paid on application will be appropriated towards the balance due on allotment. Non-payment of any instalment upon the due date will render the amount previously paid liable to forfeiture.

Application will in due course be made to obtain a Stock Exchange quotation for this Issue.

Prospectuses and Forms of Application may be obtained at the Offices of the Company, Dashwood House, 9, New Broad Street, E.C., of the Bankers, and of Messrs. Sheppards, Pelly, Price and Pott, 57, Old Broad Street, E.C., the Brokers of the Company.

£166,000 Four per cent. First Debenture Stock, created under a Trust Deed, dated the 8th January, 1894, was issued as fully paid in part satisfaction of the consideration payable to the Contractors under the Contract, dated 24th July, 1889, for the construction of the Company's line.

Apart from the contracts made by the Company in the ordinary course of business, the following have been entered into within the two years immediately preceding the date hereof:—

A Contract dated 22nd February, 1906, and made between the Company and Messrs. Sheppards, Pelly, Price and Pott, for underwriting £1,000,000 4 per cent. First Debenture Stock.

An Agreement dated 16th May, 1906, and made between the Company and the South American Light and Power Company, Limited, for the management and working of that Company's Undertaking at Bahia Blanca.

A Contract dated 16th November, 1906, and made between the Company and Messrs. Sheppards, Pelly, Price and Pott for underwriting an issue of 125,000 4½ per cent. Guaranteed Shares of £10 each.

A Contract dated 4th December, 1906, and made between the Company and the Buenos Ayres and Pacific Railway Company, Limited.

A Contract dated 5th February, 1908, and made between the Company and Messrs. Sheppards, Pelly, Price and Pott, for underwriting the present Issue.

The above Contracts may be inspected at the offices of the Solicitors on any day while the List remains open, between the hours of 10 and 4.

A Brokerage at the rate of a quarter per cent. will be paid by the Company on allotments made to the public in respect of applications bearing a Broker's stamp.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Reduced from 5 per cent. on January 23.)

Norfolk House, Friday Evening.

We felt last week that discount houses were hurrying rates down rather fast, leaving out of account the liability to return about £3,500,000 in gold to the Bank of France between now and, say, the middle of April, and the certainty that considerable amounts would have to go to Buenos Ayres, if not to other parts of South America. The mere fact that the Revenue collection always exercises a tightening influence on short money rates during the March quarter should have induced discount houses to keep quotations hard. Instead of acting thus, they were taking fine three months' remitted bills in the early part of this week below 3½ per cent. The published quotations were 3½ to 3⅝ per cent., but they worked below that figure, and even now, when the stringency of the open market and the necessity of going to the Bank to borrow considerable sums for a week at 4½ per cent. compelled the bill brokers to put up their quotations, we fear they are not always getting 3¾ per cent. Yet this is a low enough rate in the circumstances and with the outlook such as it is. Some people tell us that no more gold will go to Paris this month, but how can they know that? It is plain, anyhow, that as we stated a week ago, the gold bills have not been renewed to anything like the amount talked of, and as a matter of fact, £98,000 went to Paris this afternoon. So leading bill brokers are to-night calling the three months' bank bill rate 3 15/16-4 per cent.

The Bank of England has not only not been repaid the money borrowed last week to tide the market over the end of the month, but both yesterday and to-day it has done a fair amount of loan renewing for another week, and also considerable business in short bills discounted outright. As the Bank return indicates by the increase of £1,252,000 in the other securities the open market is hard up, and the decline of £1,635,000 in the other deposits emphasises this weakness. Other deposits indeed are now down to £40,464,000, and we do not see how the total is going to be much augmented in the near future, for the Government continues to draw in cash, and the public deposits are therefore up £1,793,000 on the week to a total of £10,078,000.

Nor is there much prospect of effective help from the fresh supplies of gold. Last Monday, for instance, the Bank of England got only about £200,000 of the small supply in the open market, another £200,000 having been taken for Paris, while India took the remaining £100,000. So emphasised was the competition that the price rose to 77s. 9½d. per oz., and the position of the Continental banks, in spite of further reductions in some of their official rates, is not indicative of settled ease. At the end of last week, for instance, the note circulation of the Reichsbank had again risen to £1,924,000 above the legal minimum as compared with £3,237,000 below it the week before, thanks to a decline of £1,031,000 in the cash in hand and an increase of £2,496,000 in the note circulation. The Bank of France is stronger, it is true, for the imports of gold have begun to tell, its stock showing an increase of £1,386,000 on the week against a decline of £1,541,000 in its outstanding notes; but rates on money are already so low in France that a change of this kind has little influence, and in any case our obligation to repay its gold contributes to the passing difficulties of our market just as much as if the Bank of France had been in need of means to strengthen its bullion reserve.

Gold has gone to South America in considerable amount this week, as our usual table will indicate, and a good deal more still has to go; therefore, discount rates ought to be maintained in the neighbourhood of the Bank rate lest the known and expected demands for our gold should spread to new quarters and bring back to us in the spring an inconvenient hardness in rates. French bankers, however, were said to be buying bills here to-day to replace in part about £1,000,000 in gold bills falling due next week. And towards the liquidation of next week's gold exportation there will be about £577,341 in from the Cape, besides the balance of the sovereigns from Egypt and other helps. Money will not be cheap for all that, and bankers are not likely to lend for a week much below 3¾ per cent., or to the Stock Exchange for the end of the month account at less than 4¼ to 4½ per cent.

SILVER.

Owing to the Chinese New Year holidays, there has been no demand from the Far East this week, and the Indian requirements appear to have been satisfied for the time being by the heavy shipment made last Friday. Business consequently has been on a very small scale, and the daily fluctuations in quotations have not exceeded 1/16d. per oz. in either direction. After touching 25 5/8d. per oz. for cash and 25 7/16d. per oz. for delivery two months forward, prices slipped back to 25 5/16d. and 25 3/8d., but rallied a little, and to-day they jumped 1/16d. to 25 13/16d. and 25 13/16d. on "bear" covering, induced by better Indian news. Applications for the Rs. 80,00,000 India Council drafts on Wednesday totalled Rs. 81,90,000 in bills and Rs. 48,00,000 in telegraphic transfers. Of these only Rs. 1,00,000 in bills and Rs. 38,00,000 in transfers were allotted, tenders at

1s. 3 29-32d. and 1s. 3 15/16d. per rupee respectively receiving in full. The amount to be offered next week is reduced to Rs. 40,00,000.

The Stock Markets.

Cross currents continue to fight each other on the Stock Exchange, and the real position of markets is less satisfactory than it was. Prices have been rushed up too fast. The Stock Exchange is always eager to make the most of favourable symptoms, and the moment the cloud lifted dealers and brokers united in a strenuous effort to lift quotations. They succeeded in driving Consols up to 88, for instance, and apart from the Home Railway market, which is still sick, and the Yankee market, in which speculators here refuse to take a serious interest, the result has been to raise most altered prices above the figures at which outsiders are inclined to buy. So successful, in short, have been the market's endeavours that it has scared away customers instead of attracting them.

To add to the trouble, new issues are pouring out as fast as they can be got ready, and we are not sure that the whole of the week's performances in this line are included in our "Critical Index," but we hear that a Peruvian Corporation loan of £1,000,000 in the form of 5 per cent. prior lien debentures, with a clause, however, empowering the Corporation to redeem in three years, is to be offered immediately at 98, and the North British Railway is coming for £1,000,000 in 4 per cent. preference stock offered at 101½, while several colonies are itching to enter the market with bids for the savings of the people. Industrial concerns of many descriptions also want money. As far as can be judged from the success of the Copenhagen loan, which was so well subscribed that the underwriters had not to take any of it, and applicants from outside only received 10 per cent. of the amount they asked for, and of the Montreal Street Railway issue, the public is more disposed to buy new issues of a promising character than to take existing securities off the hands of the market players by whom prices have been so rapidly lifted.

Consols and Trustee Securities.

Where the public is entering the market it seems to be in quest of stocks of the highest or most relied on class, and accordingly many of these are up on the week, led by Consols, which were last night still a fraction or two above the price of a week ago, notwithstanding yesterday's setback. India stocks are also firm, and the premium on the new loan is about 3¼. Domestic Corporation stocks have likewise been going up, although there is no further rise of any moment in London County stocks, and a fairly general rise of ½ to 1 has again taken place in the Colonial Inscribed market. Foreign Corporation securities are moving in the same direction when they move at all.

Foreign Government Stocks.

In the beginning of the week the horrible news from Lisbon of the assassination of King Carlos and his eldest son drove Portuguese Three per Cents. back to 60, but when the crime was not succeeded by public disorder in any part of the country the bonds rallied, and are actually ½ up on the week. This shows how diligently all bourse gamblers are at work in making the best of the cheaper money everywhere prevalent, and the only weak stock of any moment in the whole list has been German Three per Cents., weighed down by the embarrassment of Imperial finance. The Government of the Kaiser has got its increased expenditure on the army, and especially on the navy, voted, but has been unable to find the new taxes necessary to provide the money. Will our political masters take note of this difficulty, or do they prefer to go on until the question comes to be whether the German or the British Empire is the first to file its petition? Russian bonds are being diligently worked up on the Paris bourse in preparation for the coming loan, which

cannot be long delayed without growing bigger and bigger like a rolling snowball. The English scrip of the last loan has not gone up nearly so much as the older Railway bonds, and that would seem to point to an attempt at issuing another huge Railway loan, so called. Chilian bonds have rallied, Argentine and Brazilian are better, and only Central American things are disposed to slacken off. Japanese bonds have just kept their prices, and the business in the Four and a-Half per Cents. and last year's 5 per cent. Conversion Loan has been steady all week.

Home Railway Stocks.

The market here is in a most unsatisfactory condition, and traffic receipts are doing nothing to put heart into it, although the decrease shown for the past week is only £6,814, some of the lines having managed to secure increases, but the dividends have not been of a kind to rally public sentiment in favour of bull speculations, for the gambler does not care a brass farthing about reserves or any kind of provision for the future. He wants immediate display, something that will attract the outsider to buy for the rise, and when he does not get what he wants, he sells. Scotch stocks have been knocked down on reports of an impending labour struggle. North-Eastern has been flat, in spite of the really excellent revenue exhibit, and Great Eastern, Metropolitan, Great Central, and Midland stocks are all heavily down compared with a week ago. Nor have stocks like the Great Western and North-Western escaped the contagion. How long this is to go on we cannot forecast, but if the public cannot be induced to buy, we believe the weakness must continue for some time yet, in spite of "cheap money" and easy contangoes. We say this not only because the public is keeping away from the market, but because so many of the companies want more money, and in order to get it will have to offer terms which until the crisis came they would have scorned. Some of them, we fear, will have to raise their terms still further if the investor is to find them all they require. The public, however, is still buying the debenture and preference stocks, and they continue to advance in price, Chatham issues alone being flat. District guaranteed stock has risen 10 on the week, and many other preferences 1 to 2.

Indian and Colonial Railway Stocks.

Scarcely an Indian railway stock of the slightest importance has failed to advance more or less substantially this week, and the improvement has extended to the Nizam's Railways and the second debenture stock of the West of India line. Business has not been large, but the market does not require more than a hint of buying to induce it to put prices up. The struggle in Canadian Pacific shares has been fairly animated this week, and has ended in a dead heat between bull and bear, but Grand Trunk stocks have been poorly supported, and the market for them rather given the go-bye. Some of the minor Canadian Railway securities, however, have been hoisted a little, such as the debenture stocks of the Quebec Central and the bonds of the Quebec and Lake St. John Railway. Mashonaland debentures have also been again put up, in anticipation of the great traffics to come next generation.

United States Railroad Shares.

As this market continues altogether professional, it remains unnecessary for us to devote much space to its shiverings, spurts, and shimmerings. On the week prices have given way, and Baltimore, Milwaukee, Southern Pacific, and Union Pacific shares have been conspicuously depressed. Yesterday the Southern Pacific came out with a fine exhibit of revenue, and Wall Street paid no regard to it whatever. Here the play is languid in the extreme and wholly professional, so we may give this section the go-bye for the present.

Foreign Railway Stocks.

These have all been a good market this week, at any rate prices have been lifted with great vigour, particularly in the Argentine market, where our lists show a long cheering array of gains. Great Southern stock leads among the big issues with a rise of 4, and is followed by Buenos Ayres Western, which is 3 up, but some of the Cordoba and other minor issues have leaped up still further, and the whole list has moved forward on the harvest news and the continued assurances that the country is tranquil and prosperous. Antofagasta stocks have also been put up, and a modest inquiry for some of them has become visible. The rally extends to the Uruguay group, to some Mexican Railway issues, although the ordinary and first preference stocks of the old Mexican company have been flat on realisations, and the Brazilian list has shown no disposition to oppose the general tendency; in fact, St. Paulo stock is 4½ up on the week, and elsewhere Salvador bonds, Chilian Transandine debentures and the two issues of the Colombian Railway have gone with the current, the greatest advance, however, having occurred amongst some of the Uruguay stocks. Cuban things have rarely moved.

Banks, Breweries, &c.

Changes have not been so numerous in the list of Bank shares, but they are usually favourable, and the certificates of the Chartered of India new shares have risen 1½. A more remarkable change, however, has taken place in the Brewery list, where for the first time these many months prices have risen, on inside impulses almost entirely, for the public is not yet buying Brewery stocks, but the market has got hold of the idea that the new Licensing Bill is not going to be so confiscatory as the brewery boards had led it to fear, and, ever ready to discount the future, it has raised prices indiscriminately all down the list, Allsopp's stocks, for example, being quoted from 1 to 5 up, while miscellaneous debentures have been heaved up in the same manner. Bieckert's ordinary stock has gone up again to 200, Barclay, Perkin's debenture stock is quoted 6 higher, Meux's 4 per cent. debenture stock 7 higher, Dartford Brewery 4 per cent. debenture stock 5 higher, City of London 3½ per cent. debenture stock 5 higher, and so on, the only noticeable decline being in Mann, Crossman and Paulin debenture stock, which is down 4. Perhaps somebody tried to sell it. The gains altogether are of a hectic description, as may be judged by the fact that some of Watney, Combe's stocks are 6 to 7 up. In most cases no bargains are shown to indicate that there may be something genuine in the change. London Docks debenture securities have risen, but the market is far from lively.

Commercial, Electric and Other Securities.

There is still an absence of vigour in the huge Commercial and Industrial market, although there also prices for debentures and for some shares have been put up by the jobbers with or without reason. The shares of motor companies have also been lifted in some instances, although the public is certainly not buying them, and the ordinary shares of Callender's Cable Company are quoted 3½ higher, with business to warrant the advance. In other directions, such as the English Sewing Cotton and Fine Cotton Spinners combinations, the tendency has been undecided, and the market is altogether too lifeless to be interesting. There is very little life, either, amongst Electric securities, where prices are on the whole dull. The largest movement, however, is an advance of $7 in Mexican Light and Power shares, and County of London Electric shares and debenture stocks have been put up.

Financial Land and Investment Things, Financial Trusts, Gas Stocks and Insurance Shares.

Peruvian Corporation issues have been depressed on the coming new issue, and the debentures have gone back to par or below. Hudson's Bay shares have held their price and more on the week, and the comparatively rare other changes are usually favourable although of very little interest. The largest advance, indeed, amongst shares is ¾ in Australian Mortgage Land and Finance ordinary. A long row of gains amongst Financial Trusts is also noticeable with the

preferred and deferred of the Bankers' Trust leading and showing a gain of 3 to 4, but there is very little business in this direction either, and the continued improvement is much more a matter of sentiment or manipulation than of market activity. Gas stocks are firm with little going on, and the general tendency of the Insurance market has again been upward, so that Royal Exchange stock is back to 200 and the shares of the Liverpool and London and Globe Company are 2 higher, while North British and Mercantile and Royal Insurance shares have both gained 1½; but this is trivial compared to the jump of 4 in the shares of the Northern Assurance Company, popular in the provinces, and especially on Scotch Stock Exchanges. It is believed that the accounts, especially of the Fire companies, about to appear will show such a marked improvement, as well they might, on the figures for 1906 as will induce a rush to buy on the part of investors, and the market is now ready for the them.

IRON, COAL AND STEEL AND MISCELLANEOUS SECURITIES.

Vickers shares have been rather weaker, and no important security in the Iron, Coal and Steel group has moved up to an extent worthy of emphasis. Beyer, Peacock's shares, indeed, have responded by a rise of 1/16 to the comfortable exhibit made by the directors in their report, and John Brown and Co.'s shares are better to the same extent, but the market is rarely or ever disturbed even by inquirers, and the "business done" list remains nearly a blank. Workington Iron ordinary shares, however, have been offering, and closed ⅜ down. United States Steel things are also rather weaker, and United Collieries debentures are 2 lower. We may pass by Tea, Coffee and Rubber shares, where the indications of life are rare, and there is not much to say about Telegraph and Telephone securities, for business has been confined to two or three amongst them, National Telephone deferred leading, but the business in it has brought no change in price. Some buying has also taken place in Western Telegraph shares, and they are a fraction up. Anglo-American deferred, on the other hand, is weaker. Tramway and Omnibus securities have been fairly steady in the circumstances, especially the debenture stock of the Bombay company and some of the various issues of the British Columbia Company. B.E.T. preference shares and debenture stocks have also rallied in a cheering way, and Mexico Tramways things are higher, but, generally speaking, the domestic list is lifeless enough. All the stocks of the old London Water companies controlled by the Metropolitan Water Board have been put up 1, in sympathy with other trustee stocks.

FRIDAY EVENING.

Markets have been much upset to-day by the news that the Committee has decided to abolish rule 75, and many of the jobbers fear their occupation will be gone. Business in stocks and shares was poor anyway, and every department more or less in the dumps, except that for Argentine Rails, which was firm. Consols finished harder than they had been, and helped other Trustee stocks, but Home Rails were depressed by the poor-looking Board of Trade figures and by the Midland and Furness dividends, both below expectations, if not really bad in the circumstances. Yankees were stupid enough, and the Foreign market steady, without being too much oppressed by orders. Kaffir shares offer nothing to linger over, and the only other point to notice is the state of the premium on new issues market. Here is the exhibit:—Canadian Pacific "rights," 8¾; Copenhagen scrip, 1 1/16 premium for cash and 1¼ for special settlement; Grand Trunk Pacific, 1½ premium; Cape scrip, ¾ to 1 premium; Montreal Steel Railway, 1¼ to 1¾ premium; and India New, 3 to 3½ premium. There are no quotations yet for the Bahia Blanca and Metropolitan Railway issues.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending Febuary 2, 293,000 poods, equals 4,724 tons.

Baku Russian Petroleum.—Production of crude oil for week ending Feb. 1, 240,000 poods, equals 3,869 tons.

THE WEEK'S PRICE MOVEMENTS.

Company Reports and Balance Sheets.

**** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

GREAT NORTHERN RAILWAY.

An increase of £113,095 took place in the gross income of this company for the second half of 1907, the total being £3,303,458. Working expenses amounted to £2,142,871, which was £100,692 up on the same comparison, so that the proportion was 64.87 per cent. of the receipts compared with 64.07 per cent. in the corresponding period. Thus the increase in the nett revenue was only £12,403, the total being £1,160,587, and the balance remaining after meeting the fixed charges was raised to £915,000 because the balance brought forward was £10,258 up. Also £1,125 more was received from the Great Northern and City Railway Company and £2,817 more from the Great Northern, Piccadilly, and Brompton line, so that directors are able to declare a dividend at the rate of 5 per cent. per annum on the original stock, as against 4¾ per cent. for the second half of 1906, and this gives the deferred and "A" stocks 2 per cent. for the year, as compared with 1¾ per cent. All this accomplished the balance left to carry forward will be £54,511 against £52,649 at the corresponding period and £61,646 brought in from the June half-year. Most of the increase in the gross revenue came from merchandise, live stock, and minerals, which gave £73,769 more against only £15,125 more coming from an increase in the passenger and mails traffic. In working expenditure the largest increase was £86,693 in locomotive power, and next came traffic expenses up £15,860, but maintenance of way rose only £9,958 and general charges £5,363. There was a decrease of £8,991 in the charge for compensation, and rates and taxes also went down £18,667, else the whole of the increased gross earnings would have been more than swallowed up by working charges. Capital expenditure in the half-year amounted to £177,917, of which £53,097 went into new working stock, and £78,996 into lines open for traffic, including the outlay upon the Finsbury Park Underground Station of the Piccadilly and Brompton line. In the current six months the estimated capital outlay is put at £200,000, of which £28,000 will be for new working stock and the balance at the debit of capital account is already £18,817, against which, however, the company holds nearly £1,000,000 of trust funds, including £686,198 of superannuation and guarantee funds. In their report the directors mention the agreement made with the Great Central Company, and announce that the Railway Commissioners fixed the hearing of objections to the project for the 26th inst. The board also mentions the purchase of the Louth and East Coast Railway for £87,000, and the power to provide this money is sought for in the company's Bill now before Parliament. Dividends are payable on the 25th inst.

METROPOLITAN DISTRICT RAILWAY.

It is a far from exhilarating story that the directors of this unhappy company have to set forth, but there are indications that the worst has been seen and, we hope, passed. Traffic receipts for the half-year showed an increase of £8,617 at £224,463, while working expenses at £156,069 were only £350 up. Even so there was a deficiency of £34,391 in the amount required to provide for rent charges, interest on debenture stock, &c., and to this has to be added £10,938, being the company's share of the nett revenue arising from the City lines joint undertaking, which money, however, has to be set aside to meet, as far as it will go, the 4 per cent. dividend on the guaranteed stock. This stock gets a dividend only at the rate of £1 15s. per cent. for the past half-year, and the arrears due to its holders will now amount to £212,379. The nett revenue for the half-year was £8,394 up at £68,394, and most of the items in its traffic income show increases, indeed all of them except first-class passenger receipts, which have fallen off £4,514, but we fear the first-class passenger is doomed to disappear because carriages for him are dragged backwards and forwards empty most of the time. A glance at the balance-sheet shows something of the company's embarrassments, and it is at the end of its powers so far as raising money is concerned. The overdraft on capital account is now £314,322, and the company owes £433,175 borrowed temporarily on the security of its surplus property. It has still to spend capital, moreover, and the gross outlay for the past half-year on this account was £97,145, including £5,460 laid out on new electric rolling stock, but the company received £165,999 from the Great Northern, Piccadilly and Brompton Railway for land at Lillie Bridge, &c., £18,110 from the Tilbury and Southend Company for high tension cables, &c., bought by it and £2,196 for old rolling stock sold, so that there was actually a credit of £86,660 carried to capital account at the end of the half-year. None the less do the company's finances require to be put in order, and a Bill has been deposited in Parliament whereby the company seeks power to raise £750,000 on prior lien stock to rank immediately after the company's rent charges, of which stock £550,000 will be issued as soon as the requisite powers are obtained. Most of this money will no doubt be utilised to put the existing floating debts in order, so as to secure it from recurring troubles on that score. Power is also sought to confirm the agreement with the Brompton company under which the price to be paid by that company for lands and rights acquired has been fixed at £166,000, and the same Bill is to provide for the abandonment of the South Kensington and Mansion House portion of the Deep Level Railway authorised in 1897 to be constructed under the District Railway between Earl's Court and the Mansion House. The estimated capital required for this undertaking now to be abandoned was £1,200,000, and the board is quite right in seeking to get quit of the enterprise.

HULL AND BARNSLEY RAILWAY.

Gross receipts went up in the December half-year by £45,091 to £339,632 and working expenses by £33,010 to £207,901, the ratio being 61.21 per cent. as against 59.38 per cent. for the second half of 1906. The nett revenue is thus only £12,081 greater, and out of the balance of £101,707, including £24,962 brought forward from the June half-year, remaining after all fixed and other charges have been met, the directors again devote £10,000 to pay additional interest at the rate of 1 per cent. per annum on the second debenture stock. Then £5,000 has been transferred to the renewal and contingencies fund, leaving only £86,000 available for the preference and ordinary stock dividends or £8,155 less than a year ago when only £2,000 was carried to the contingent fund. When the preference dividends have been satisfied the directors are able to give a dividend of only 3½ per cent. annum on the ordinary stock, carrying forward £12,623, which is 1 per cent. down compared with the distribution of a year ago, but the dividend declared in June was at the rate of 2 per cent. per annum, so that for the whole year the shareholders get 2¾ per cent. as compared with 2½ per cent. for the year 1906, in the first half of which the ordinary stock got nothing. Working expenses show a large increase of £18,331 in the cost of locomotive power, and traffic expenses went up by £8,613, but rates and taxes are £244 less, and there was an increase of only £500 in the cost of maintenance of way, &c., while carriage and wagon repairs went up little more than £1,000. Dock expenses increased by £6,133, but dock receipts were £8,823 better. Capital expenditure amounted to £141,530 in the half-year, of which £69,198 went into new working stock, and in the current year £58,400 more is wanted for working stock, the total expected outlay on capital account being put at £167,293. The capital account, however, is only overdrawn by £85,596, but even so more capital will be required before very long. The tonnage shown as using the docks at Hull during 1907 increased by 800,630 tons to a total of 5,855,396 tons, of which 3,487,175 tons are credited to the North-Eastern Railway Docks and 2,386,221 tons to the Alexandra Docks. Dividend warrants will be posted on the 21st inst.

TAFF VALE RAILWAY.

The gross income of this South Wales line for the second half of 1907 came to £539,946 and the working expenses to £305,977. This meant an increase of £34,537 in the receipts and of £18,941 in the expenses, the proportion of working costs to income being 56.67 per cent. compared with 56.59 per cent. in the corresponding half-year. This left the increase in the nett receipts at £15,596, and there was also an increase of £5,289 in the balance brought forward and sundry credits to revenue added which brought the total nett income up to £256,081 or £20,895 more. The directors are accordingly able to declare a dividend at the rate of 4¼ per cent. on the new ordinary stock, equivalent to 10⅝ per cent. per annum on the old ordinary stock, as against 4 per cent. and 10 per cent. respectively a year ago and to again add £5,000 to the reserve for special con-

urgencies besides putting aside £8,000 towards the cost of rebuilding Pontypridd Station, and still have £22,622 left to carry forward as against £17,219 a year ago and £21,621 brought in. The largest increase in the cost of working was naturally in locomotive power, which rose by £14,770. No other item shows material change except that traffic expenses are up nearly £2,000 and carriage and wagon repairs down £704,000. Parliamentary expenses are also down £482, but rates and taxes show very little difference on comparison. Dock and harbour receipts amounted to £42,371 and dock and harbour expenses to £10,573, the receipts showing an increase of £2,870 and the expenses of £1,201. Nett revenue charges are also for the most part unaltered except that rents and royalties are up nearly £500 and interest on banking balances £511 up, the total fixed charges being £1,010 higher. Capital expenditure in the half-year amounted to £46,281 of which £11,991 went into new working stock, and another £37,600 is expected to be laid out in the current half-year. The accounts show that the capital account is overdrawn by £443,260 against which there is only about £66,000 in trust and insurance funds of various kinds available, so that there must be a good deal of miscellaneous borrowing hid away in the other items of the balance-sheet. The directors state that the Merchant Shipping (Tonnage Deduction for Propelling Power) Bill which has become law is of serious and increasing importance to the company as lessees of Penarth Dock. Dividends are payable on the 17th inst.

GREAT NORTHERN AND CITY RAILWAY COMPANY.

Nothing could be more disappointing than the successive displays made by this unfortunate undertaking. Its revenue for the six months ended December 31 was only £47,582, but then there was a decrease of 358,749 in the number of passengers carried. Working expenses took £24,778 or 52.07 per cent. of the gross receipts, so that the free income of £22,804 plus the balance of £1,035 brought forward from June, or £23,839 in all, was only sufficient to meet rents, £8,046, interest on debenture stock, £10,084, general interest, £4,830, and a credit of £500 to the renewal fund, leaving less than £380 to be carried forward. Thus there is nothing at all available for the £1,560,000 of outstanding preferred and deferred ordinary stocks. The receipts, indeed, show an unpleasant tendency to shrink, and came to £936 less in the past half-year than in the second half of 1906. For the year, however, the decrease is only £576, and in agreement with the Great Northern Railway fares have been somewhat increased, with the effect that the decline in receipts has been "to a large extent checked." By and by also the disastrous competition of surface carrying passenger vehicles may give place to something like reasonableness, but just at present the outlook is not promising, and what makes it worse is the position of the capital account, which is now overdrawn by £196,546, rendering an issue of £153,000 in Lloyds bonds necessary. The company also owes £33,089 to contractors, and its future capital requirements are estimated at a total of £383,654. In present circumstances it will be totally impossible to raise that money, and we wonder how the company was able to get £750 to spend on capital account in the past half-year.

NORTH STAFFORDSHIRE RAILWAY.

Gross receipts for the December half-year from all sources amounted to £523,195, or £26,411 more than in the second half of 1906, and working expenses went up £24,911 to £318,562, so that the gain in nett income was only £1,500. Locomotive power cost £9,460 more, repairs £6,321 more, and maintenance £2,794 more. There was also an increase of £2,587 in traffic expenses, and one of £2,475 in general charges, and the reductions in other items of account came altogether to less than £900. Nett revenue from all sources, and including the £10,555 brought forward, amounted to £218,731, or £1,579 more, and as the fixed charges were a few pounds up there is nothing to pay a higher dividend with. So the ordinary stock gets 2⅜ per cent. for the half-year as before, or at the rate of 4¾ per cent. per annum, and £11,362 is left to carry forward. Capital expenditure in the six months was only £9,552, and the debit on capital account is only £35,519. Dividends payable on the 27th inst.

ALEXANDRA (NEWPORT AND SOUTH WALES) DOCKS AND RAILWAY.

Gross receipts rose by £579 to £132,827, and expenses by £6,402, while the decrease in the balance brought forward compared with a year ago was £6,264, so that the disposable revenue for the half-year ended December 31 last was £12,087 down, and after meeting fixed charges, up £4,894, there was only £42,171 left, compared with £59,152. Out of this the board places £2,038 to account of new works and special renewals chargeable to revenue, and pays the full dividends on the 4½ per cent. A and B preferred stocks, and recommends that the dividend on the preferred ordinary stock be made up to 4 per cent. for the year. A year ago the deferred got 2 per cent. It now gets nothing, but the company is at present carrying an oppressive amount of unproductive capital. The capital expenditure of the half-year was £207,452, bringing up the total unproductive expenditure to £583,268. Dock extension absorbs most of the money, £182,587 having been sunk in that enterprise in the past six months. The balance at the debit of capital is now £401,694, and there is nearly another £500,000 yet to be spent. Loans from bankers amount to £321,484, and there is a large floating debt in the shape of "sundry outstanding accounts £134,682." But the Docks earned £101,001 last half-year at a cost of £38,526 in expenses and cost of repairs.

LIVERPOOL OVERHEAD RAILWAY CO.

Receipts from passenger traffic for the half-year ended December 31 were £1,793 higher at £40,136, as the result of an increase of 271,076 in the number carried, but there was a slight falling off in rents and miscellaneous receipts, making the gross revenue £40,783 against £39,029. Expenses, however, owing to additional cost of coal and stores, were £1,096 heavier at £32,154, leaving the nett income £209 down at £8,629. Adding £4,452 brought forward and £353 from interest, the disposable total amounted to £13,454 or £506 more, and as only six months' dividend had to be provided on the 1900 preference compared with a full year's dividend, the ordinary shares can get a distribution at the rate of ⅝ per cent. per annum, with a reduction of £67 to £4,179 in the sum carried out. Only £103 was spent on capital account, but the debit balance is now £23,425, against which there is a renewal fund of £15,663.

EAST AND WEST YORKSHIRE UNION RAILWAYS.

This small undertaking earned £11,920 gross in the December half-year, and working expenses took £5,901 of this. Receipts went up by £2,261, and expenses by £1,213. After meeting the fixed charges, the available nett revenue is £1,142 higher at £4,342, and the directors recommend a dividend at the rate of 4 per cent. on the preference stock, carrying forward £1,722. The capital account is overdrawn £7,342, and the expenditure on this account last half-year was only £969.

GREAT SOUTHERN AND WESTERN RAILWAY (IRELAND).

Traffic income for the second half of 1907 was £787,047, showing an increase of £50,427, and working expenses amounted to £454,741 or £43,092 more, so that the increase in the nett revenue was only £7,335, and as prior charges rose by £8,726, allowing for a small increase in the balance brought from the previous half-year, the sum finally available for dividend on the ordinary stock was only £128 up at £185,765. Out of this, however, the directors declare a dividend at the rate of 4½ per cent. per annum, or an increase of ¼ per cent. per annum on the corresponding half-year, leaving £65,941 to be carried forward or £31,907 more than was brought in. To attain this result the company has not this time transferred anything to the general improvement account, while a year ago it got £5,000. A year ago, also, £67,470 was left to carry forward. The fact that prior charges of various kinds absorbed £8,726 more made the balance available for dividends only £164 up at £265,486. The Fishguard and Rosslare enterprise, for example, cost £19,786 in interest charges in the past half-year, or £4,000 more than in the second half of 1906, and there is an increase of £3,390 in the general interest account, while the dividend payable to the London and North-Western Railway is up by £872. In the ordinary working expenses the cost of locomotive power has risen by £26,686 and traffic expenses have come to £5,908 more, and there is an increase of £4,891 in the cost of maintenance of way. Carriage and wagon repairs also cost a little more, but compensation is down about £500 and law charges are also £475 down, while there are no important increases in any other direction. Capital expenditure in the six months came to £23,631, of which £16,377 went to pay for new working stock, a new dining car alone having cost £1,921. In the current half-year the expenditure is put at £14,350. At present the debit to capital account is £355,022, but the company has found most of the money in its superannuation and insurance fund, so that it owes its bankers only £66,081. Dividend warrants will be posted on February 29.

GREAT NORTHERN RAILWAY (IRELAND).

We must compliment this company on the lucidity of its revenue statement. If all companies imitated it much less work would fall upon the analyser each half-year. The gross receipts in the December half of 1907 were £27,962 up at £562,934, and as working expenses only rose by £14,312 to £298,783 it followed that the profit for the half-year was £13,650 up at £264,151. There was also an increase of £1,639 in the miscellaneous receipts at £5,069, making the entire increase in nett revenue £15,289, but fixed charges took £4,418 more at £69,056 and £10,000 additional was placed to renewal and improvement account at £25,000, so that in the end the increased available balance was only £871 up at £175,164. There was £650 more brought forward, however, at £39,014, so that altogether the directors had £1,521 more available. No addition is made to the dividend on the ordinary stock, which is again placed at 6¾ per cent. per annum, and after that is paid and the above-mentioned £25,000 put aside to renewals and improvements, a balance of £51,184 remains to be carried forward against £39,014 brought in and £51,273 carried out a year ago. Working expenses show an increase of £11,205 in locomotive power and of £5,033 in traffic expenses, but carriage and wagon repairs are down £3,148. Other changes are too minute to deserve analysis, but slightly on the upward tack. In the half-year capital receipts amounted to £53,430, including £8,150 of premiums received, the company having issued £10,745 of ordinary stock, £23,285 of consolidated 4 per cent. preference stock, and £11,241 in consolidated 4 per cent. debenture stock. The capital expenditure of the half-year was £58,469, only £8,524 of which represented new working stock, and in the current half-year £44,000 more is expected to be laid out. In spite of the above-mentioned new stock issues, the overdraft on capital account is up £32,507 compared with a year ago at £258,243, and the various reserve and trust funds amount only to about £190,000. Dividend warrants will be posted on 29th inst.

STUCKEY'S BANKING COMPANY.

For the second half of 1907 this bank made a profit of £42,360, and allowing for £82 more brought forward at £7,041, the total of £50,511 shows a decrease of £4,000 on the corresponding half of 1906. The dividend is never stated. In the balance-sheet the Consols and other British Government stocks held are £20,800 down at £1,750,600. In this item is presumably included £1,500,000 of Consols entered a year ago at the price of 85, but in the present accounts this information is suppressed. The

directors, however, have set aside £55,000 to form an investment reserve fund, so that no doubt any further depreciation shown at the end of the year was more than provided for. Metropolitan stock, City bonds and Bank of England stock held shows a decrease of £5,500 at £432,221, and the holding of Canadian, Egyptian and Turkish guaranteed bonds is £2,850 down at £256,154. There is also a decrease of £4,000 in the amount of Indian Government stock and debentures held, the total of which is now £131,000, and the bank's holding in Dutch, Swedish, German, Prussian, Norwegian, and Danish Government stocks is £1,400 lower at £70,352. Furthermore, the holding of Colonial and Corporation stocks and bonds is £19,500 less at £318,846, and British, Colonial and Indian railway debentures and debenture stocks have been written down by £5,082 to £623,783, but the £185,772 in British and Indian railway guaranteed, preference and ordinary stocks remains as before, as does also an item of £26,906 sunk in gas, water and other stocks. Altogether the investments amount to £3,795,636, showing a reduction of about £59,000, and in addition to this, as already mentioned, £55,000 has been written off to an investment reserve fund, leaving the investment total at £3,740,636. Loans to brokers at call and short notice have been reduced by £249,906 to £350,000, and cash is less by £3,896 at £450,055. The bank's assets in bills discounted, loans and advances show an increase, however, of £73,478 at £2,771,220 and bank premises are up £7,280 at £86,869, but there is a decrease of £1,583 in other freehold and leasehold properties held, now entered at £27,806. The liabilities of the bank on current accounts, deposit notes, rebate, contingency and other accounts amount to £6,588,625 or £227,653 less than in the corresponding half of 1906, and notes and drafts in circulation are likewise £1,109 less at £79,449. The aggregate of the balance-sheet therefore is now £288,758 less at £7,426,585.

WILTS AND DORSET BANKING COMPANY.

For the year 1907 this company's nett profits, including £10,305 or £3,664 more brought forward, came to £161,132, showing an increase of £10,827 on the total for 1906. The directors are therefore free to pay the regular 20 per cent. per annum and have £21,132 left to carry forward or £10,827 more than was brought in. With a prudent regard to all contingencies the directors have decided to write down the Consols held by the bank to 83, and to also provide for the depreciation visible on December 31 in its first-class securities. Accordingly £150,000 has been transferred from the surplus fund to the investment depreciation fund, but even so the reserve fund will amount to £600,000, all invested in Consols; in fact, the nominal value of the Consols representing this sum is £722,892, so that the bank has from first to last written off nearly £123,000 on this account alone. An increase of £103,563 is shown in the liabilities on deposit, current and other accounts, now up at £10,910,480. The circulation in notes and drafts is £250 higher at £47,693, and the item bills for collection and rebate carried forward is £16,116 up at £76,575. Amongst the assets the total holding in Consols, all taken at 83, is entered at £976,471, the nominal value of the investment being £1,176,471. Other investments in British and Indian Government securities, Bank of England stock, domestic Corporation stocks, colonial bonds and other first-class securities show a decrease of £353,478 at £2,801,384, and the other securities and properties held at £207,522 show a reduction of £25,646. Cash on hand, at the Bank of England and in the hands of London agents and brokers shows an increase of £199,891 at £1,804,868, and the other mixed item, bills discounted and for collection, loans, overdrafts, &c., has increased by £178,760 to £6,278,130. There is also an increase of £4,959 in the item bank premises, but owing to the writing down of the investments the total of the balance-sheet is actually £19,243 less at £12,425,881. Gross profits, it should be said, rose by £8,749 and expenses by only £1,586.

STAMFORD, SPALDING AND BOSTON BANKING COMPANY.

Last year the profits of this country bank, including £2,258 or £316 less brought forward, show an increase of £295 at £45,012, out of which the directors pay a final dividend at 6 per cent., making with the 4 per cent. paid last August 10 per cent. for the year. Then £11,000 is placed to the investment reserve account against £5,000 a year ago, and £2,000 is written off bank premises. A year ago £8,000 was devoted to writing investments down, so that the actual amount set aside is the same for both years. Investments, the directors say, are by the present assignment of £11,000 brought within the market value, but the increasing business in Leicester has involved a large expenditure on remodelling the premises there, so that the cost of bank premises is really £2,589 up at £108,820 in spite of the £2,000 now written off. The balance forward is £295 up at £2,553. In the balance-sheet the liability and balances due to customers on deposits is £53,771 higher at £3,417,994, and on foreign bills negotiated £2,746 up at £5,153. Cash on hand and at London bankers is £12,992 higher at £320,142, but money lent on call and short notice is £2,435 less at £102,837. Brokers' bills, an item we do not understand, is £16,494 less at £50,789. The surplus fund of £185,000 is invested in Consols, presumably fully written down to the market price at the end of the year. Other securities of the British and Indian Governments show an increase of £72,556 at £298,102, but there is a decrease of £32,182 in the British railway debenture and preference stocks and other investments held and now entered at £196,545. Altogether the investments in these classes of securities now figure at £559,439 as against £525,030 the year before. Advances to customers, properties, debentures and shares held, a very curious and unsatisfactory compound, amount to £2,450,675 or £10,269 more than at the end of 1906. Bills discounted, however, are £2,173 down at £142,111, and the aggregate of the balance-sheet is just £46,923 higher at £3,924,966.

NORTHAMPTONSHIRE UNION BANK.

For the year ended December 31 last this bank's profits, after providing for bad and doubtful debts and for rebate, came to £55,238, which was £732 more than in the previous year. Adding £2,167 or £781 more brought forward, the disposable balance of £57,405 is £1,513 up, and the directors after paying two dividends of 12s. 6d. each, making 25s. for the year, and providing for income-tax, are able to add £6,000 to the guarantee fund with £3,643 left to carry forward. Depreciation, they say, in the value of the investments has been fully met, and they stand in the balance-sheet at less than the market value of the various stocks on December 31 last. With the addition made for the year the guarantee fund is now raised to £369,000. The liabilities to the public on deposit and current accounts are mixed up with rebate on bills, reserves for doubtful debts and contingencies, and make a total of £2,744,937 which is £15,503 up. Drafts and notes in circulation are also about £112 higher at £2,052, cash in hand and with London agents shows an increase of £62,448 at £260,270, and investments are £14,503 higher at £1,005,522, these investments comprising besides Consols, Local Loans, Bank of England, Colonial Government, Corporation, Indian guarantee and English railway stocks with others the character of which is without indication. Bills of exchange only amount to £289,121, which, however, is £56,000 up, and bank premises are £207 up at £34,236, while advances of all kinds are £15,815 up at £1,950,328, and the total of the balance-sheet is £23,102 higher at £3,539,478.

LONDON AND HANSEATIC BANK, LIMITED.

This undertaking differs considerably from other banks in that it does not seem to have much of a *clientèle* amongst depositors. Including a pension fund for the staff of £7,673 the liabilities under the head of current and other accounts on December 31 were £18,446 smaller at £59,335 than they were a year ago. Acceptances, however, had risen by £309,800 to a total of £3,733,947, and, on the other hand, current and other accounts due to it showed an increase of £545,081 at £3,620,057. Cash in hand was very little higher at £42,658, but loans at call and short notice were £60,000 up at £245,000 and investments were valued at £215,199 against £176,366, while bills receivable came to £391,548 or £240,199 less. Business during the twelve months would appear to have been pretty good and gross profits including £7,754 or £618 more brought forward were £4,796 larger at £70,908, of which expenses absorbed an additional £1,518 at £18,876 leaving £52,032 compared with £48,754. More capital, however, ranks for dividend this time, and in order to maintain the distribution at the old rate of 7½ per cent. it has been found necessary to ignore the reserve which a year ago got £10,000, and after putting £1,000 to pension fund the balance carried out is increased by £5,778 to £13,532.

BANK OF WHITEHAVEN, LIMITED.

This small bank earned a gross profit of £13,673 in the half-year to December 31 after payment of income-tax and making provision for bad and doubtful debts and other contingencies. This is an increase of £485 against the corresponding period, and an extra £398 at £3,457 was brought forward, making the total credit £883 larger at £17,130. Current expenses were a trifle up at £2,524, and rebate on bills and interest on deposits took £5,223 or £409 more. Balance of profit therefore comes to £9,383, a gain of £440, which enables the directors to pay the same dividend and bonus at 10 per cent. per annum and 2s. 6d. per share respectively and to carry forward £3,224 as against £2,780 a year ago. There is a trifling drop to £7,815 on the note circulation, short dated drafts are £1,064 smaller at £3,546, and deposit, current and other accounts show an increase of about £1,000 at £510,564. On the other side the investments held have been increased by £8,652 to £261,280, and bills of exchange, advances on current accounts and special loans have gone up £6,114 to £401,117, so that cash balances and money at call has declined by the considerable amount of £10,509 to £29,241. Paid-up capital is £98,530 and the reserve £70,000, while a redemption fund of £5,500 is held against buildings account of £13,700.

BOVRIL, LIMITED.

This company's business, we regret to say, continues to show increasingly poor results, and the gross trading profit for 1907 was £21,667 less than for 1906 at £295,357. This added to a decrease of over £20,000 in 1906 over 1905 makes the total decline for the two years almost £42,000, and the position is not much improved when the other small items of revenue are included, for although the dividend on Food Specialists shares and interest received is up £120 at £1,197, transfer fees at £305 gave £37 less, and the final result is an income £21,584 less than in the previous year at £296,859. Some little savings, however, have been effected in working expenses. Thus the total working charges, including salaries and commissions, rent; taxes, insurance, advertisement expenditure, depreciation, directors' and trustees' fees and provision for bad and doubtful debts are £2,459 down at £176,887. The directors and trustees have taken £250 less at £3,460, but the charge for bad and doubtful debts is up £211 at £1,621, and the allowance for depreciation is £235 up at £3,850. It follows, therefore, that the nett profit of £119,972 is £10,390 lower than that of the previous year, which was in its turn fully £22,000 less than the profit for 1905. The balance of £19,383 brought forward showed, however, an increase of £5,362, so that the disposable revenue was only £5,028 worse at £139,355. Accordingly the directors meet all the debenture and preference charges and make up the

dividend on the ordinary shares to the usual 7 per cent., but are unable to give the deferred shares more than 2 per cent., which is 1 per cent. less than a year ago and 2 per cent. less than two years ago. They, however, add £10,000 to the reserve this year, raising it to a modest £175,000, against nothing at all last year and £20,000 two years ago, and still have £11,855 left to carry forward, or £7,528 less than was brought in. The changes in the balance-sheet are not significant of any particular alteration in the position of the business, but £996 has been written off the goodwill, tradesmarks, patent rights, freehold and leasehold property, holdings in Virol, Limited, and Food Specialists, Limited, which is now entered at £2,507,237. Plant and office furniture, however, is up £226 at £16,185, and stock on hand taken at or below cost down £15,646 at £122,333. The stock of advertising material on hand is entered at £11,274. Cash shows a reduction of £5,072 at £32,389, and trade debtors are £1,112 lower at £91,541, the balance-sheet being made up to a total of £2,789,441 by £8,482, representing tablets, showcards and unexhausted advertisements. On the liabilities side creditors are owed by the company £7,929 less at £43,061, but there is a slight increase of £295 in the £4,525 entered as reserve for doubtful debts and dilapidations. For all that the company is not growing stronger, and we wish it had paid smaller dividends and built up a larger reserve in the flush years of its prosperity.

BEYER, PEACOCK AND CO., LIMITED.

Although the improvement in revenue for the year ended December 31 was nothing like those of its immediate predecessors, it was still very satisfactory, and this big engineering firm is now not so very far short of its achievement in 1902. Trading profits rose by £7,532 to £91,434, interest gave £3,786 or £1,531 more, and with £107 from transfer fees, the total income was £9,092 up at £95,327. A slight reduction in expenses left the nett revenue £9,172 better at £91,391, to which was added £10,220 or £6,363 more brought forward. Debenture interest having been provided for, the directors place an extra £8,662 at £16,894 to depreciation reserve, but against this there is nothing to write off suspense account compared with £8,000 a year ago. Depreciation in investment takes £214, and after meeting preference dividend the amount available is £55,253 against £40,220, but the directors have decided to make a much needed effort to strengthen the company's position by transferring £30,000 to reserve compared with £10,000, and therefore reduce the dividend on the ordinary shares from 10 per cent. to 7½, leaving £10,253 to be carried forward. Outlay on property for the year was £8,283, but £10,053 is taken from the depreciation reserve to write off dismantlements, leaving the capital expenditure £1,770 down at £469,733, apart from £11,911 carried in suspense. Goodwill, of course, is unaltered at £144,501, and against these the reserve stands at £40,000 and the depreciation reserve at £42,304. Work in progress shows a substantial advance of £31,848 at £110,218, and stocks have been increased by £1,576 to £26,914, a figure which is certainly moderate enough. Trading balances are favourable, creditors amounting to £53,719 against £91,529 due from debtors, and cash now reaches the fine total of £96,454. Other assets consist of £15,525 for premiums paid on sinking fund policy for the redemption of the debenture stock on January 1, 1952, and an unnamed investment valued at £9,525.

LANARKSHIRE STEEL CO., LIMITED.

The directors of this concern are very unhappy, and complain of the "dumping" of surplus products by German steel-makers as one of the causes contributing to the miserable results shown for the year 1907. Yet in spite of this dumping they were able to maintain and even to increase their output, so that the German metal would hardly seem to have interfered with their market appreciably, and the mention of dumping seems to savour of Tariff Reform tactics. The company was undoubtedly much less prosperous last year, and its nett profits showed the heavy drop of £21,099 at £49,664, but this decline would appear to be fully accounted for by the sudden fall in prices following the American crisis and the higher cost of labour and raw materials. Including £10,402 or £6,325 more brought forward, the disposable surplus amounted to £60,066 against £74,840, and after providing £1,292 less at £22,268 for depreciation, the dividend on the ordinary shares is cut down from 8 per cent. to 5. A year ago the directors were able in addition to transfer £12,000 to reserve, but this time they make no attempt to increase that fund, and are therefore able to add £4,067 to the sum carried out at £14,469. Some additions have evidently been made to the property during the twelve months, as the nett reduction in capital expenditure is £16,636 at £345,383, and against this the reserve is meagre enough at £25,000, especially as it is not separately invested. Floating liabilities, however, are moderate at £71,296 compared with £104,623 due from sundry debtors, while stocks are £5,412 larger at £73,774 and cash has risen by £6,077 to £61,340.

RHYMNEY IRON CO., LIMITED.

An interim report issued by the directors of this company states that the output of coal for the six months ended September 28 was 421,312 tons against 388,202 tons in the corresponding period of 1906, and the make of coke increased by 1,530 tons to 24,834 tons. Advantage was taken of the state of the market in the autumn to make contracts for a considerable quantity of coal to be delivered over the 12 months to December of this year. In July the workmen's representatives applied for an increase in the wages of 5 per cent. which was agreed to, and a further 2½ per cent. was granted in November, bringing them up to 60 per cent. above the standard of 1879, which is the maximum under the agreement of December 11, 1905. An interim dividend at the rate of 3 per cent. per annum for the half-year has been declared and paid.

BENGAL IRON AND STEEL CO., LIMITED.

A wonderful recovery is shown in the report for the year ended September 30, notwithstanding that the output of pig-iron and castings had to be restricted, owing to the large stocks on hand at the end of the previous year and to the Indian Government not renewing their contract for a fixed supply. The production of pig-iron was consequently 7,634 tons less, and of castings 1,923 tons less at 39,246 tons and 12,304 tons respectively, but the output of coal was increased by 27,722 tons to 71,703 tons. Nothing had to be provided for loss on steel works this time compared with Rs. 3,03,513 a year ago, and with this help the profits on sales advanced by Rs. 4,25,655 to Rs. 8,56,071, the sterling equivalent being £57,071 against £28,694. Miscellaneous receipts were £1,398 higher, and instead of a payment of £966 for interest, the company received £525 under that head, making the total income £30,300 better at £59,364. Indian expenses, including £1,022 more at £10,798 for depreciation, took £13,447, and London office charges were also slightly heavier at £10,493, but the nett revenue still showed a gain of no less than £29,680 at £35,424. The directors, therefore, are able to wipe out the half-year's preference dividend in arrears, and after paying 3 per cent. on the ordinary shares they transfer £5,000 to a steel works sinking fund and £7,626 to the reserve, leaving £3,234 to be carried forward. Although £11,567 was written off the cost of steel works during the year the total expenditure on capital account is £6,698 up at £380,881, against which the reserve and renewal funds, with the present contributions from revenue, will amount to £38,468. The debenture debt and temporary loans stand at the old figures of £151,100 and £7,667 respectively, but creditors are £7,985 lower at £9,953, while, on the other hand, a decrease of £23,243 to £47,201 in stocks is more than offset by increases of £5,999 to £34,070 in sundry debtors and £36,721 to £49,709 in cash.

SOUTH METROPOLITAN GAS COMPANY.

Sir George Livesey's account of the half-year's business of this company is always frank and well worth reading, and for the six months ended December 31 last he has to explain why the results are so non-progressive. In doing so he lays emphasis upon the effect of the incandescent mantle in reducing the consumption of gas, and mentions further that out of £10,450 of law charges involved in fighting the rate authorities on the question whether meters, stoves, &c., supplied by the company under the penny in the slot system are rateable, all but £800 falls on the South Metropolitan Company. The extra cost of coal and rates, with these exceptional expenses, has affected the revenue so much that the directors are only able to declare a dividend at the rate of £5 6s. 8d. per cent. per annum, being the full amount payable under the sliding scale at the enhanced price of gas and rating, a decline of 3s. 4d. per cent. per annum on the distribution of twelve months back. The revenue account shows an increase of £122,668 at £1,025,005, no less than £43,015 more having been received for by-products and £79,650 more from the sale of gas, while stove and meter rents gave £2,585 more, and rents receivable £2,581 less. Stated in another way, the sale of gas together with payments for public lighting gave £670,327, meters and stove rents £64,798, residual products £288 042, rents receivable £1,742, and transfer fees £95. It cost, at £610,413, £92,302 more to manufacture gas, but the payment under co-partnership arrangement is £5,000 down at £13,000. Cost of gas distribution, repairs, &c., has risen by £18,663 to £106,598, and there is a small increase of £1,282 in the management charges, which amounted last half-year to £32,357. The augmented law charges we have already noticed. The capital expenditure during the six months amounted to £20,114, bringing the total up to £5,032,611 exclusive of the nominal amount added by conversion, less £855,146 in premiums received, which was £2,996,520. Interest on debenture stock and temporary loans and deposits was accordingly £1,704 up. The balance-sheet shows an increase of £8,482 in the various renewal funds, of £59,457 in the debit to capital account, now £296,208, and of £22,300 in the amount due to sundry tradesmen for coals, stores, &c. On the other hand, stores in hand are £42,952 up, and accounts due to the company are £21,973 higher, the one item being now £445,516, and the other £326,519. Other balances due to the company show a small increase of £1,077, these including £57,516 due for slot gas fittings and £10,667 due for hire purchase fittings. The Monazite Sand suspense account is entered at £9,669.

GAS LIGHT AND COKE COMPANY.

In the December half-year this company's free revenue after providing for fixed charges and setting aside £10,000 towards the redemption fund as also £10,000 to the insurance fund is £376,576, and this is brought up to £683,568 by the balance of £306,992 brought forward. The board is therefore able to pay the same dividend at the rate of £4 8s. per cent. per annum on the ordinary stock. That takes £334,017 and leaves £349,551 to be carried forward, or £42,559 more than was brought in. The sales of gas show an increase of 1 per cent. over the corresponding half of 1906 and for the year the increase is nearly 2¼ per cent., there having been an addition during the past year of 14,736 consumers and an increase of 19,077 in the gas stoves sold or let on hire. A better sale of gas and improved prices for coke and breeze together with various economies in working are given as the source of the better revenue. The resumption of the meter rent, discontinued in 1895, has also given considerable profit to the company—a profit estimated at about £60,000 per annum—and this, taken in conjunction with the improved general position, has permitted the directors to announce the reduction of 1d. per 1,000 cubic feet in the price of gas as from the beginning of the present year. The entire revenue of

the company for the past six months was £2,093,726 and the expenses came to £1,504,312, expenses being £151,000 up as against an increase of £180,000 in the gross income. For the second half of 1906 only £2,500 was carried to the insurance fund and the interest on temporary loans, &c., cost £3,862 as against only £1,930 in the past half-year. The gross capital expenditure of the six months came to £75,801, but against this £15,667 was written off for depreciation of plant and £30,800 for depreciation of meters and stoves, so that only £29,334 remained to be debited to capital, and the company has still £408,475 in hand representing capital unspent.

CARDIFF GAS-LIGHT AND COKE COMPANY.

Sales of gas for the year ended December 31 amounted to 970,019,125 cubic feet, and with £6,327 from public lighting and contracts the revenue from this source was £130,247. Stove and meter rents gave £12,594, residual products £28,221 and sundries £1,139, making a total of £172,201, of which £32,027 was retained as nett profit. Including £415 brought forward, the directors had £32,443 to deal with, and after providing for debenture and other interest dividends are paid at the maximum rates on the preference and consolidated ordinary stocks, leaving about £660 to be carried to the new account. Outlay on capital account during the twelve months was small at £7,444, but £102,000 is added on both sides for nominal increases on conversion, making a total expenditure £608,195, but, on the other hand, £26,380 was received for new ordinary stock together with £4,334 for premiums, and the credit balance is now £32,691. There is, however, an asset of £25,591 for special renewals and depreciations, and as stocks are valued at £29,629 and stocks and fittings on hand represent another £11,802, the company has had to raise £37,500 by temporary loan. Including interest on investments the reserve fund comes to £34,171 and the depreciation fund to £7,944, of which £34,040 and £787 respectively are represented by Consols and Rhymney Railway debenture stock specifically earmarked. Trading balances are decidedly favourable, £14,749 being due to sundry creditors against £36,575 to come in, but the company so far from having any cash owes £3,587 to its bankers.

BRENTFORD GAS COMPANY.

In their report for the six months ended December 31 the directors of this concern report with pleasure a very satisfactory increase in the sale of gas amounting to 7.01 per cent. over the corresponding period of 1906, and continued advance in the receipts from coke sales. These fortunate circumstances have more than offset the high price ruling for coals, so that profits have risen substantially. From all sources the revenue adds up to £228,948, an increase of £21,434, and the expenses being only £12,424 larger the nett profit goes up from £41,614 to £50,625. Balance from previous account was the big one of £55,289, and interest produced £399, making £106,314 in all. Interest on debenture stock and sundries accounted for £4,135, leaving £102,178, from which the directors again provide dividends at the rate of 5 per cent. per annum on the preference stock and 12½ per cent. per annum on the consolidated stock, but at 9½ per cent. per annum against 8½ per cent. on the new stock 1881. The directors have decided to undertake the maintenance of consumers' mantles and burners at a small quarterly charge, a departure which they hope will still further conduce to the popularity of gas lighting. Small additions on account of interest were made to the insurance and reserve funds in the half-year, and these now stand at £6,618 and £37,211 respectively. Capital account is in credit to the amount of £11,637, and the general finances are in pretty good shape. It may be remarked that the extra cost of coals and oil for the half-year was £11,440, and that no other items on the expenditure side showed a really large increase.

POWER-GAS CORPORATION, LIMITED.

Misfortune follows misfortune with this company, and each annual report seems a more melancholy document than its predecessor. The plan of working through subsidiary companies has proved an utter failure, and the directors' statement for the twelve months ended September 30 is a depressing reiteration of depreciation, depreciation in this, that and the other direction. Ashmore, Benson, Pease and Co., Limited, it is true, appears to have done a little better as it was able to pay £3,500 on account of interest on advances made to it by the corporation with a surplus of £591 compared with a total profit of £1,582 a year ago, when no interest was paid. That, however, was no great achievement as the payment only represented about 2½ per cent. on the indebtedness, and even that result was obtained by omitting to provide for losses ascertained. The A.B.P. Accumulator Company, for instance, was wound up at a loss of £16,823, which has been temporarily placed to a suspense account in Ashmore, Benson's books, while a revaluation of the latter company's own property shows a serious depreciation, chiefly owing, it is said, to the extensive alterations and additions made from time to time in the remodelling of the works. The amount of the depreciation is, we understand, given in a separate circular, which the company has not sent us, but the deferred shareholders have agreed to bear the whole of the loss, and it does not therefore affect the ordinary shareholders except indirectly. Notwithstanding the interest received from Ashmore, Benson, gross profits of the corporation, including £4 from transfer fees, fell off by £6,411 to £7,797, and although the directors surrendered their fees the saving in expenses was only £1,993 at £8,421, leaving a loss of £624 on the year. This is increased to £2,930 by a bad debt arising out of a contract for a large Mond gas installation entered into with Messrs. Kosmoid, Limited, of Dumbarton, which was never completed owing to the financial difficulties of that firm, and the credit balance brought forward is consequently reduced to £253. The property account stands at £166,462, and advances to Ashmore, Benson and Co. have risen by £14,477 to £130,896, and with regard to all these items the auditors point out that no depreciation has been allowed. Investments in other companies, amounting to £19,791, are taken into the balance-sheet at their face value, and here also the auditors have to state that the market price where available is considerably under the figure. Sundry creditors, including a banker's loan of £5,000, are £9,135 down at £11,835, but against this contracts partly executed, including an estimate of profits to date approved by the directors, less cash received on account and sundry debtors have been reduced by £18,496 to £15,625, and cash and bills show a decrease of £7,058 at £4,099. Various negotiations, the directors say, are in progress for the installation of the company's systems of gas production, and, undeterred by previous experiences in that line, the company has gone in for yet another subsidiary. In conjunction with the Sheepbridge Coal and Iron Company, Limited, it has formed the Langwith By-Product Company to instal a large Mond ammonia recovery plant at the Langwith Colliery, but the contract was not concluded in time to help out last year's accounts. Several Mond gas installations, including repeat orders, were completed and set to work during the twelve months, but the volume of power-gas business in this country continues small.

YORKSHIRE ELECTRIC POWER COMPANY.

The demand for energy from this company's mains is steadily increasing, and up to December 31 last agreements had been entered into with consumers for a total of 5,548 kilowatts or 7,437 horse-power, being an increase of 2,426 kilowatts or 3,252 horse-power during the six months. For the first three months of the half-year ended December 31 business was still being carried on at a loss, but since then the receipts have not only met all current expenses, but have been more than sufficient to cover mortgage interest in addition. Sales of energy produced £4,837 or £1,384 more, work done for consumers gave an additional £1,158 at £2,332, and miscellaneous receipts were also better, making the total revenue £2,594 up at £7,294. Against this generation and distribution expenses, including £2,322 or £1,038 more spent on maintenance, work for consumers, &c., rose by £1,337 to £5,191, and management and general expenses took £1,266, leaving a nett surplus of £837 compared with a loss of £403 a year ago. Debenture interest, however, required an extra £176 at £976, so that the nett result is a loss of £139 to be added to the debit balance brought forward increasing it to £13,057. Capital expenditure for the six months was £3,746, making a total, including £67,522 for cost of promoting special Act, formation expenses, &c., of £285,510. This leaves £13,240 still in hand, but more money will have to be raised very shortly as the company is not over well provided with funds. Floating liabilities amount to £8,811, and although £2,400 of this will be satisfied by the issue of fully-paid shares, the excess over sundry debtors is still heavy at £1,667 and cash comes to no more than £86.

LONDON PRODUCE CLEARING HOUSE, LIMITED.

In their report for the year ended December 31 the directors of this company announce with pleasure that the amalgamation with the Contract Association, Limited, has been carried out as sanctioned by the shareholders in May last. At a further special meeting held in August it was resolved to distribute a bonus, now included in the accounts, in adjustment of the final settlement with the Contract Association. From the latter concern the company received £81,000 in all against the issue of 25,000 ordinary paid-up shares of a value of £62,500 subject to special dividend payment, and we are told that the amalgamation has brought about a satisfactory increase in the registrations of sugar. The turnover of coffee, however, shows a further decline "owing to the continued effect of influences foreign to the fundamental laws of independent trading"—in other words, to the unwise coffee valorisation scheme. Gross profit for the year was £33,145 an increase of £7,801, a sum of £18,500 came in from the amalgamation with the Contract Association and £18,005 was brought forward, an aggregate of £69,650. Deducting general expenses £12,447, and directors' remuneration £1,400, and £55,803 is left. Out of this an interim dividend of 1s. 6d. and a bonus of 3s. 7d. was paid on the original 50,000 ordinary shares, while the founders' shares received £29 16s. 9d., and a sum equivalent to the interim dividend was paid on the 25,000 new shares allotted to the Contract Association. The directors now propose a further dividend of 3s. 6d. per share on the present capital of 75,000 ordinary shares and £25 per share on the founders' shares, carrying forward £23,674. The company possesses a cash balance of £45,854 and investments of £199,465, just slightly depreciated, while bankers' bills receivable are £234,323 against £129,376, and advances against produce and other securities come to £161,323 compared with £241,226. The excess of profits over losses discounted, on clients' contracts and balances due by clients covered by securities is £40,307, a trifling increase on the year. On the debit side loans with and without securities amount to £327,000, and the amount due on current accounts is £122,781.

RYLANDS AND SONS, LIMITED.

Conservative as ever, the directors of this old Manchester business restrict the information vouchsafed to the shareholders to such an extent that the half-yearly reports and accounts throw no useful light on the situation. The company holds all the share capital of a subsidiary concern, known as Rylands and Sons (Colonial), Limited, and the results obtained by it are incorporated in the profit and loss account of the parent, but in such a way that we cannot tell whether the offspring has proved a help or a hindrance. The business, however, has always

held a high place amongst its fellows, and the results for the six months ended December 31 were fairly satisfactory. Nett profits were only £2,863 down at £79,258, a modest enough drop for this company, but the sum of £26,256 brought forward was considerably smaller, giving a disposable surplus of £105,515 compared with £115,019. It seems, however, to be a point of honour with the directors to maintain the dividend at the rate of 12½ per cent. per annum, and in order to make this distribution the reserve fund is again passed over, and the undivided profits of former years are again drawn upon considerably, leaving £11,765 or £9,504 less to be carried forward. The omission to transfer anything to reserve is of little consequence, as the company is already strong in this respect, having accumulated a reserve of £500,000 and an insurance fund of £250,000 together equal to half the paid-up share capital. Liabilities for calls paid in advance still amount to £304,275, and sundry creditors are practically unaltered at £973,718, a figure which seems unduly heavy even for a company of this size. On the other side of the balance-sheet, freehold and leasehold land, buildings and plant are valued at £793,118 or £15,651 less than a year ago. Stock-in-trade, ledger balances, investments, bills receivable and cash in hand and at bankers constitute the only remaining entry, and although the information leaves us very much in the dark as to the actual position, we may mention that the total of £3,440,394 shown is £25,615 up.

STAFFORD NORTHCOTE AND CO., LIMITED.

This wholesale drapery house was so seriously affected by the poor summer last year that it stands in the unenviable position of having to record a greater decline in nett profits than any other company in the same line of business. Nett profits for the twelve months ended December 19, including dividends on investments, dropped from over £17,000 to no more than £5,749, and after providing for directors' fees the available total with £1,120 brought in was only £6,369. The preference dividend took £4,000 of this, and as an interim dividend at the rate of 5 per cent. per annum was paid in March, absorbing £3,500, it follows that the year has wound up with a debit of £1,131. For the previous twelve months the distribution on the ordinary shares was 20 per cent., so that the present collapse is a startling one. With the decline in the business done stocks have increased by about £3,000 to £33,137, while sundry debtors are over £7,000 lower at £67,173, while, on the other hand, floating liabilities are much about the same at £29,146. Goodwill is valued at £49,000, or nearly one-third of the share capital, which seems high, but otherwise the company's position is not unfavourable. Leases, plant and fixtures stand at £15,394, against which there are accumulations, including a special reserve of £10,000 for preference shares, of £16,950, and all of this is separately invested. In addition the company holds investments of £5,000, while bills receivable amount to £2,057, and cash is fair at £8,028.

SCOTT, SON AND CO., LIMITED.

Apparently business was considerably better with this dry goods firm during the twelve months ended December 31, and nett profits increased by no less than £2,638 to £9,889. The amount brought forward was £1,142 smaller at £5,307, but the balance to be disposed of was still £1,495 to the good at £15,196. After paying the preference dividend and again giving the ordinary shares 5 per cent. £750 or £357 more is put to leases reserve and the surplus carried forward is raised by £1,139 to £6,446. From the balance-sheet it would seem that customers did not pay up quite so promptly as in 1906, as sundry debtors are £7,400 higher at £71,257 and bills receivable come to £401 more at £2,765, while cash balances are £2,921 smaller at £5,463. Stocks at the same time come to £73,832 or an increase of £3,399, with the result that liabilities to sundry creditors have increased by £6,390 to £12,949. It has not been thought worth while to write anything off either lease and goodwill or fixtures, fittings, &c., which stand at £34,320 and £3,008 respectively, against which the reserve including the present addition only totals £7,250.

CROCKER, SONS, AND CO., LIMITED.

A further decrease of £1,595 to £21,453 has to be recorded in the nett profits of this company for the year ended December 31, but £4,471 or £219 more was brought forward and after providing for all charges and writing off another £1,050 for depreciation the nett surplus was £19,296 against £20,671. Nothing, however, is set aside for doubtful debts compared with £1,000 a year ago and only £4,000 or £1,000 less is transferred to reserve, so the directors are able to repeat the dividend on the ordinary shares at 7 per cent. and to add £625 to the sum carried out raising it to £5,096. Liabilities to creditors on open accounts are £1,389 smaller at £12,888 and cash deposits come to £56,473, while, on the other hand, stocks are £647 larger at £81,211, sundry debtors have risen by £4,922 to £149,851 against which the reserve for discounts and doubtful debts is up by £177 only at £4,956. Cash, too, is £3,504 higher at £23,786, but this is more than offset by a decrease of £5,371 to £9,800 in bills receivable. Goodwill stands at the old figure of £31,390 and freehold and leasehold premises remain at £82,200, but fixtures, fittings, &c., have been increased by £919 to £14,449, and against these the general reserve will now amount to £24,000 and the depreciation fund to £6,450, both, however, being employed in the business.

DEVAS, ROUTLEDGE AND CO., LIMITED.

This company's operations do not appear to have been brilliantly successful during the year ended December 20, and the directors regret that the result of the trading has not been more satisfactory. Nett balance was only £4,330, making with £7,403 brought forward a total credit of £11,734. The interim dividend was 2½ per cent., but the final is 1 per cent. less, making 3 per cent. for the year, and to pay this it is necessary to forego the carry forward to £5,917. The balance-sheet is much of the kind issued by all the important wholesale drapers, but the small sums due to creditors is a satisfactory point. Possibly depositors of £45,947 to some extent take their place. On the other hand, sundry debtors owe £[illegible], bills receivable amount to £6,504 and stock is entered at £72,134. The cash balance is not very striking at £4,500. Goodwill remains at £15,000, and there is a fund for depreciation and contingencies of £6,595. An investment of £15,000 in India 3 per cent. stock is valued at £14,850, much above its market figure. A number of important changes are proposed in the articles of association, and will doubtless be fully explained by the chairman when they come up for sanction, especially the one relating to directors' remuneration.

BRADBURY, GREATOREX AND CO., LIMITED.

Nett profits for the twelve months ended January to [illegible] showed a moderate improvement of £1,537 at £26,040, and with £2,463 or £303 more brought in the total income was £1,840 up at £28,503. The increase, however, is not sufficient to permit any addition being made to the dividend on the ordinary shares, which remains at 8 per cent., leaving the larger balance of £4,303 to be carried forward. Apparently the directors do not consider it worth while to transfer anything to reserve, seeing that it stands at £100,000, apart from the special funds of £17,232 for leases and fixtures. The allowance of £72 for depreciation seems meagre on leasehold buildings valued at £73,123, while fixtures, fittings, &c., have been written up by £11,211 to £16,970, which figure they were considered worth when valued on September 9 last. Liabilities to sundry creditors are £32,444 up at £210,749, against which stocks are £22,460 higher at £220,520, and sundry debtors have risen by £20,104 to £435,316; but cash has dropped by £2,688 to £38,778, and bills receivable are only £255 more at £8,760. The progress of the business when measured by the growth in profits does not seem in any way phenomenal, but such as it is the directors consider that larger resources are needed, and they ask for powers to increase the ordinary share capital.

HART AND LEVY, LIMITED.

Trading profits for the year ending December 31, 1907, amounted to £35,578 after providing for directors' fees, income-tax, &c., and show an increase of £1,350. With £5,866 brought in the total available is £39,444 being £2,348 more than in 1906. After payment of the preference 5½ per cent. dividend, 8 per cent. is declared on the ordinary shares, making with the interim paid, 11 per cent. for the year as before, but a bonus of ½ per cent. is given in addition. Reserve again gets £2,000, and similarly £3,000 is written off capital expenditure, while a new appropriation is made of £442 in reduction of the special suspense account. These deductions still leave the carry forward £6,961, which is £1,095 more than was brought in. Capital expenditure account with addition of £1,867 during the year now stands at £247,899, to be further reduced £3,000 as stated above. Stocks in hand are £5,866 up at £73,338. Trade balances are still more largely in favour of the company, debtors owing £1,343 more at £47,982, while creditors are reduced £524 to £7,150. Bills receivable are £217 down at £6,372. Cash, £8,880, is much the same. Suspense account is £515 higher at £1,942, but is subject to deduction of £442 out of the year's profits. The only indebtedness has already been treated. Reserve will amount to £22,196, while the year's contribution and plate glass insurance reserve is increased by provision of £156 during the year to £596, but both funds are employed in the business.

JOHN LOVEYS AND CO., LIMITED.

A slight reduction is shown in the annual report of this boot manufacturing enterprise, trading profit being £[illegible] less at £9,244. Interest and transfer fees also produced about £[illegible] less at £313, but with the assistance of the much larger [illegible] brought in the total profit is £290 higher at £10,856. There is a small reduction in general expenses, which leaves the available balance £322 better at £10,021. Interim dividends of [illegible] per cent. on the preference and 4 per cent. on the ordinary shares were paid in July, and similar distributions now, making the same as last year, absorb £8,400, leaving £1,621 3s. 6d. to go forward. Stock in trade is reduced by £[illegible] to £64,132. Cash has swelled by £4,458 to £21,577. Bills receivable have shrunk from £1,271 to £32 and this, with creditors "nil" heading the debit side, almost reduces the business to a cash basis. Goodwill, leases, and fixtures described as purchase [illegible] is unaltered, and in form and treatment the only blot on the fair sheet. Fittings, &c., are written down by £110 to £[illegible]. Besides reserve £20,000 used as [illegible], the only item on the debit side is the sum of £140 unclaimed dividends.

A. AND S. HENRY AND CO., LIMITED.

Nett profits for the twelve months ended November [illegible] showed a comparatively small decrease of £[illegible] at £[illegible], but the balance brought forward was £1,732 larger at £8,[illegible], the disposable total was actually £[illegible] higher at £[illegible]. Out of this the directors again pay dividends aggregating 8 per cent. for the year, but they put £40,000 or £10,000 less to reserve No. 2, which is being built up against goodwill, and raise the sum carried to the new account by £10,000 to £40,401. The directors have further transferred £20,000 from the general to the [illegible] reserve, so that this now amounts to £230,000, but whether it covers the balance-sheet value of that asset or not we cannot tell as the item is mixed up with trade marks, furniture and fittings in a total of £31[illegible]. Freehold land and buildings, warehouses in Manchester and Belfast are valued at £5[illegible], or only £92 less than a year ago, but against this the ordinary

reserve amounts to £50,000. Stock in trade, trade debtors and sundries aggregate £1,449,850 or an increase of £158,964, and the directors would be well advised if they split up this item, as well as that of goodwill, &c., into more detail. Bills receivable and cash have dropped by £21,094 to £88,535, while, on the other hand, sundry trade creditors and depositors are £87,009 up at £439,426.

JOHN HOWELL AND CO., LIMITED.

This old-established business managed during the twelve months ended January 4 to improve upon its results for the previous year, good though those were. Nett profits rose by £1,790 to £15,869, or about double the gain shown for 1906, and with £59,605 or £579 more brought in the available total was £2,369 up at £75,474. Out of this dividends aggregating 6¼ per cent. are paid compared with 5⅝ per cent., and £869 is added to the sum carried forward making it £60,474. It is, however a pity that the directors do not see their way to transfer part of this large surplus to a specific reserve as against leases and premises valued at £46,659, and fixtures, &c., taken as worth £11,364, the only accumulation is £2,146, which has been invested in Consols. Liabilities to cash and other creditors have been reduced by £3,388 to £36,168, and on the other hand debtors are £1,846 lower at £187,558, and bills receivable come to £2,410 or £1,152 less, while stocks have been increased by £1,265 to £88,238 and cash is £713 up at £9,412.

LINOLEUM MANUFACTURING CO., LIMITED.

During the year ended December 31 £66,125 of this company's reserve fund was distributed to the shareholders in the shape of shares increasing the paid-up capital to £330,625, but in addition fresh funds were brought into the business by an issue of 3,875 new £5 shares at a premium of £6 per share. By the end of the year £26,442 had been received on these, and comparatively small though the amount is it seems to have been employed in a very remunerative fashion. Gross profits improved by £14,871 to £94,140, of which expenses, including 10 per cent. written off machinery and 2½ per cent. off buildings, took £21,531 or £3,164 more, and debenture interest required an extra £532 at £1,636. After providing for directors' fees, writing off £653 for expenses of new share issue, the nett surplus was £68,320 compared with £57,798, and by putting only £5,000 to reserve against £15,000 a year ago the directors are enabled to pay a dividend and bonus of 17½ per cent. or 2½ per cent. more, and to raise the sum carried out by £2,568 to £26,411. Additions to freehold land and buildings at Staines cost £9,358, and after deducting the allowance of £2,351 for depreciation this item is £7,007 up at £91,693, plant and machinery less £8,973 written off is £401 higher at £77,211, but the leasehold warehouse has been reduced by the sinking fund of £924 to £9,276. Against these the reserve and fire insurance funds now amount to £70,974, of which £59,168 is invested either in Government and other securities or in the German company's shares. Stocks have been increased by £26,776 to £228,748, debtors are £2,368 up at £48,018 and cash and bills are £12,800 higher at £39,392, but owing to the new capital these increases have been brought about with an advance of no more than £2,602 to £19,925 in sundry creditors.

MOSS'S EMPIRES, LIMITED.

The old proverb that "It's an ill wind," &c., found a good illustration in this company's experience of 1907, when its profits improved by reason of the unseasonable summer which affected the prosperity of so many other undertakings. A year ago it was announced that the company had acquired the Grand Theatre, Birmingham, but extensive alterations and improvements took up a good deal of time, and it was only reopened on December 9, so that its contribution to the revenue cannot have been important. Yet the nett profits rose by £48,668 to £193,289, the improvement following one of £35,854, and with £3,292 more at £12,197 brought forward the total revenue was £51,957 up at £205,602. Expenses were not very much heavier, and after providing an extra £136 at £12,879 for depreciation the nett surplus amounted to £152,030 compared with £101,496, and, in addition to raising the dividend from 7½ per cent. to 10 the directors transfer £60,000 to reserve against £25,000, and carry forward £13,811 or £1,614 more. Property account was increased by £38,520 to £1,807,848, probably for the Birmingham Theatre, but nothing is said about a deduction for the termination of the company's interest in the Glasgow Zoo and Hippodrome in November, nor is the provision for depreciation of leaseholds altered. The allowance for the year is again £1,386, making a total to date of £7,573, a figure which seems decidedly inadequate, even if we take into account the general reserve, now amounting to £85,000. Additions to furnishings cost £9,438 and £11,492 was written off, leaving this item £2,055 down at £103,365, but the company apparently has no dead weight in the shape of a goodwill to carry amongst its assets. In addition to a share capital of £1,031,285 there is a debenture debt of £332,855, and £252,199 has been received from premiums on ordinary shares. Special overdrafts and mortgages have been reduced by £10,806 to £195,799, and liabilities to sundry creditors are slightly lower at £39,692, while on the other hand a decrease of £1,367 to £24,156 in sundry debtors is accompanied by increases of £1,745 to £7,713 in stocks, £9,097 to £24,620 in investments and £5,970 to £18,353 in cash.

LONDON PAVILION, LIMITED.

The 21st annual report shows that 1906's advance in gross takings has been a little more than maintained at £53,984 against £52,083, but at the cost of a £2,052 increase in outogings, so that nett profit is actually £71 lower at £13,937. Salaries, wages and refreshments cost £27,784, advertising £2,543, rent, licences, &c., £4,867, and printing £454, of which £244 came back in advertisements on programmes. With £433 or £134 more brought in, the disposable balance of £14,370 is £62 up, but this is reduced £200 by a vote to the directors, which brings their remuneration up to £750. The same rate of dividend—viz., 7 per cent.—is declared, £752 is written off furniture account, and £1,000 off premises, and apparently £318—the amount is unstated—is carried forward. With the deduction noted and an addition of only £275 against £917, premises are reduced by £725 to £198,888, but goodwill still figures in it. Furniture, &c., totals £28 more at £5,252 and stocks are £183 higher at £1,348. The debtors and creditors position is improved by £600, but is still adverse, the former being £761 against £1,061 owing, and cash is £264 down at £8,383. Loan from bank on mortgage debentures remains at £25,000, as does the general reserve at £12,000, and being held in cash, is fortunately subject to no depreciation. On the whole, in a bad year for theatrical business, the undertaking has done satisfactorily, though it is still a good way behind the 11 per cent. of 1902 and 1903.

BRITISH INVESTMENT TRUST, LIMITED.

This important and excellently conducted trust company has added another satisfactory year to its good record, and the only criticism we can offer is that no detailed list of investments is published. Beyond intimating the class of security in which the company's money is placed, and to some extent the "geographical distribution," no information is vouchsafed. However, it may be pointed out that £2,605,120 is invested in railways, including street lines, and £1,006,791 in foreign and State loans, bonds, debentures, and stocks and shares. Thus the total held is £3,611,911, of which 86 per cent. are publicly quoted in London, New York or elsewhere. Taking these at the middle price on January 1 and valuing the rest in a conservative manner, the directors are able to state that, notwithstanding the recent depreciation in all classes of securities, the share and debenture capital, reserve fund, and revenue balance are more than intact. This is undoubtedly a very encouraging condition of affairs, but none the less is it disheartening to gather from the directorial remarks made last year, set against the pronouncement now contained in the report, that the depreciation in the twelve months must have been in the neighbourhood of £300,000. Including £91 for transfer fees, the income for the twelve months ended January 1 was £191,181, and after meeting expenses of management, interest on loans, income-tax, &c., the balance over is £168,251. Interest on debenture stock requires the important sum of £57,000, preferred stock dividend of 5 per cent. is £42,750 and 10 per cent. or ½ per cent. more is paid to the deferred stockholders, leaving £11,501. Of this £10,000 is added to the reserve fund, increasing it to £435,000, and £1,501 is added to the sum brought in, making £6,127 to be placed to the credit of the current year. Last November authority was given for an increase of the capital by £500,000, but with much good sense the directors decided to delay any new issue. The company has borrowed £130,00 on temporary loan and new capital will be needed presently to adjust the position.

FOREIGN AND COLONIAL INVESTMENT TRUST CO., LIMITED.

Despite a year of universal depreciation of securities fortune has again smiled, or, perhaps, to be more accurate, good management has given this successful investment trust company a satisfactory increase to report in its figures in every direction. Revenue account for the year ending January 10 shows an advance of £2,495 in income from investments at £143,158, which is increased by £311 interest and transfer fees to £143,469, and of £2,490 in the nett balance of £136,643 after deduction of expenses. With £12,250 brought in £148.802 is available, being £3,669 more than last year. Interim dividends paid in July last took £55,973. The preferred stock gets its 2½ per cent. and 3½ is paid on the deferred, making 6 per cent. for the year, and a bonus of 1 per cent., leaving £15,919 to go forward. On capital account a balance profit of £19,542 has been realised by redemption, sales, &c., exceeding last year's by £2,123. Of this £12,362 or £2,623 more is applied to writing down securities and £7,180 or £500 less is added to capital reserve, bringing this item to £627,425 or over 20 per cent. of the value of stocks held. It may be observed that out of some £230,000 redeemed and sold about £100,000 has been reinvested in American bonds and notes, while in the list of 213 stocks which accompanies the report barely £180,000 represents colonial securities, and that includes £122,000 India 3½ per Cents. The total value of investments is £3,047,780, taken at cost, less amounts written off to date, and is £16,542 higher than last year, while cash at bankers stands at £32,548.

SCOTTISH REVERSIONARY CO., LIMITED.

Owing on the one hand to the high rate of interest paid on borrowed money during the latter part of the year, and on the other to the fact that the loans on security of reversions were smaller, the nett income from interest in 1907 was £2,324 down at £13,792. Profit on reversions and policies fallen in during the year, however, rose by £330 to £24,846, and credit was taken for £27,647, or £4,271 more on account of increase in value of reversions and policies held and present value of bonus additions to policies. Including £755 less at £800 brought in the income from all sources was £1,510 better at £67,240, against which premiums on policies took an extra £447 at £13,041, income-tax came to £1,791 or £357 more, and with small increases in management expenses and debenture interest the nett surplus was £625 up at £33,675. Out of this the usual dividend of 6 per cent. is paid, but this requires a little more because of the new capital now ranking and £675, or £125 less, is carried forward. Capital account remains at £550,000, and the debenture debt at £387,790, including £50,000 deposited as

security for an advance of a like amount, but a further £35,210 has been borrowed. On the credit side increases are shown of £54,111 to £429,449 in reversions, and £40,150 to £457,093 in policies purchased, while loans on reversions are £22,418 smaller at £183,555, the total of these items being £71,843 higher at £1,070,097. Temporary advances, however, come to £44,500 less at £14,562, while cash is £2,553 up at £3,567, and the surplus of debtors over creditors has risen by £5,184 to £33,100. The reserves are unaltered at £131,151, not even the interest earned on the securities representing them being added.

AVERAGE TRUST, LIMITED.

This is a very small affair, possessing a paid-up share capital of £5,000, and having bank loans of £11,170, but its performances appear to be distinctly above the average. Interest and dividends yielded £1,298 in the year to December 31, profit on realisation of investments gave £1,719, and registration fees £2, making £3,018 in all. After meeting general charges, interest on loans and directors' fees, the nett credit is £2,212, and £200 was brought in, increasing the available sum to £2,412. Dividend on the preference shares requires only £125, so that 30 per cent. can be paid on the ordinary capital, with £500 to special reserve, £500 to dividend equalisation fund, and the increased sum of £537 to next account. These allocations mean that considerably less than half the profits is distributed in dividends. Total reserves will now be £3,250, and the chief assets are investments at cost £20,911, and loans against security £1,150. The directors propose to issue the remaining 500 £5 preference shares at par, and the 2,500 unissued £1 ordinary shares at £1 premium, shareholders to have priority of allotment. It may, however, be noted that the articles provide for the issue of the two classes of capital in equal proportions, and a preference in allotment will be given to those whose applications are framed on this basis.

LLOYD AND YORATH, LIMITED.

After providing for all charges, including £1,150 for compensation levy and £1,272 for loss on properties the licences of which have been taken away, the nett profits of this Welsh brewery for the twelve months ended November 30 were £22,046. With £1,587 brought forward the available total was £23,633, of which debenture interest took £10,600 and £250 was set aside for redemption of "A" debentures. Preference dividend having been paid the ordinary shares receive 6 per cent. for the year and £3,000 is written off preliminary expenses leaving £1,580 to be carried out. Freehold and leasehold properties less £18,315 of a depreciation reserve are valued at £342,821, horses, &c. at £14,942 and goodwill stands at £11,593, while preliminary expenses outstanding are still large at £12,767. As the issued share capital is only £136,720 it follows that the company is heavily weighted with debt, and in addition to debentures amounting with accrued interest to £231,965 it owes £6,733 on mortgages and £15,176 to its bankers. Trading balances are favourable it is true, £15,041 being due to creditors against £18,219 to come in, but cash is small at £347, and as £4,535 is required for the final dividends just declared the position is none too good.

CROWN BREWERY COMPANY.

Compared with the corresponding period of 1906 gross revenue for the half-year has risen £1,991 to £43,522, but the nett balance is only £157 better at £11,588. With £5,266 brought in, and £15 more in rent at £5,434, profit and loss is credited £22,295 or £1,427 more. Debenture interest takes £6,107, reserve and leases funds get £1,000 each, and a dividend of 4 per cent. for the half-year absorbs £3,974, leaving £2,449 to go forward. Property purchased now stands at £399,102 against £402,607, while mortgage debentures are reduced by £2,881 to £291,024. Brewery buildings have been further written down to £18,900. Debtors owe the company £1,651 less than the amount of £6,521 due to creditors. Stock-in-trade is £1,150 up at £11,688, and cash, though nearly three times the figure under comparison, is not lavish at £695. Reserve and leases funds amount to £3,616 more at £39,048, and, being sunk in the property purchased, might just as well now as later be written off that item.

STAR BREWERY, CAMBRIDGE, LIMITED.

Gross profits for the year ended October 15 were £20,170 and £7,343 came in from rents and transfer fees, making £27,513 altogether. Directors' fees, general expenses, &c., took £6,934 of this, £1,231 was written off for depreciation and bad debts, and £2,423 went in repairs, leaving a balance of £16,925. The company, however, has raised so much money by mortgages and debentures that interest charges are heavy, amounting to no less than £11,339, and after providing £792 for licence compensation and £807 for managing directors' remuneration the surplus is only £3,987. Adding £2,099 brought forward the directors have £6,086 to deal with, of which they propose to put £2,000 to a reserve against loss in respect of licences extinguished and £1,000 to the ordinary reserve, carrying forward £3,086, so that even the preference dividend cannot be paid. Additions to property and improvements, less sales, depreciations, and licence compensation received, amounted to £2,636 for the year, making a total of £370,490 against a share capital of £120,000 and a mortgage debt, including accrued interest, of £250,951. The directors state that so far they have lost the licences for ten freehold and three leasehold properties, on which they admit there is a loss, and shareholders might inquire how far that loss is covered by the proposed reserve. Plant, machinery, &c., account was increased by £936 and reduced by £945, so that the nett change is trifling at £9,505, against which the reserves will now amount to £16,000, all, however, in the business. Floating liabilities come to £5,433, and £3,449 is due on loans and deposits against debtors £7,061, stocks valued at £7,955, and cash £4,714.

HEAVITREE BREWERY, LIMITED.

Gross profits from all sources for the twelve months ended October 31 amounted to £20,132, and are said to compare favourably with the previous year when it is remembered that three licences have been lost, and that the London branch profits decreased in consequence of the above-mentioned depression. Outgoings took £11,786, leaving a nett profit of £8,346, but debenture interest is heavy at £6,232, and the available surplus, including £2,401 brought in, was only £4,515. Out of this eighteen months' dividend to June 30, 1905, is paid on the first issue "A" preference shares, absorbing £2,565, and as £1,500 is written off preliminary expenses the sum carried out is reduced to £450. Dividends on 3,000 of the "A" £10 preference shares are now in arrears from July 1, 1906, and on 1,000 "A" and 41,611 "B" £1 preference shares from July 1, 1900; but the directors are only waiting for the new Companies Act to come into force on July 1 next to bring forward a scheme for the rearrangement of the capital, when this incubus will probably be got rid of. The issued capital is £116,611 against a property and goodwill account of £235,015, so that a large amount has had to be raised by loans, and the debenture debt with accrued interest comes to £139,534. Sundry creditors are light at £4,727, against debtors, less £2,425 reserved, for £13,450, and cash is fairly good at £9,069, of which £1,061 is in the hands of trustees. Stocks are valued at £13,023, and as preliminary expenses still figure at £4,500 the reserve and depreciation fund of £12,881 has had to be employed to finance the business.

MILWAUKEE AND CHICAGO BREWERIES, LIMITED.

The increase in sales reported by the American company for the twelve months ended September 30 was a very moderate one of 17,170 barrels at 1,009,282, but this perhaps was only to be expected after the big expansion of the two preceding years. What is more to the purpose is that in spite of the large business done, profits were cut into by the high cost of materials and showed a decrease of no less than £6,434 at £193,494. Repairs cost £1,074 more at £54,322 and an additional £832 at £40,340 was allowed for depreciation, but head office charges took £9,453 or £242 less, and after providing for interest the nett surplus was £53,442 compared with £61,541. The balance brought in, however, was considerably larger at £35,480, making the available total £1,081 up at £88,922, out of which dividends absorbing £52,361 or the same as a year ago are paid, and the sum carried out is raised to £36,561. Of this dividend the English undertaking receives £52,257, to which is added £245 from interest and transfer fees and £996 or £776 less brought in, and after meeting all charges the dividend is maintained at 6 per cent., leaving only £252 to be carried forward. Owing to the state of the finances of the American company, due to the general stringency of the money markets, the cash to pay this dividend cannot be remitted before the end of March, and payment is therefore postponed until April 2.

NORTHERN CORPORATION, LIMITED.

The holdings of this company in brewery properties produced during the year £57 less in rents at £28,812, but interest and transfer fees gave £252 more at £708, so that gross receipts were £195 higher at £29,520. From this is deducted the astonishingly small expenditure of £500—even then £96 more extravagant than last year—and £29,019 is nett profit. The amount brought in was £1,223, less £750 voted to directors. Debenture service requires £14,000, and after providing preference dividend the ordinary shares get 12½ per cent. as last year, £1,000 or £200 more goes to general reserve and £1,367, subject to directors' remuneration, is carried forward. Properties figure at cost at £565,068, only £245 having been added during the year against £6,937 in 1906. Debtors are £1,002 higher at £27,299, of which £25,000 is loan account, but cash is trifling at £525. Liabilities are little altered. Share capital is £225,000 and debenture debt £300,000. Loans and interest and creditors total £14,371. With this year's addition the general reserves are £42,000, and reserve for exhaustion of leasehold properties £2,029, including £238 added during the year.

MAYPOLE DAIRY CO., LIMITED.

This company's profits keep up in a highly satisfactory manner, and the directors are naturally pleased with the past year's results in view of the higher cost prices of the principal commodities in which the company deals and a heavier sum allowed for depreciation. Nett trading profit, rents, interest and transfer fees for the year ended December 28, 1907, were £187,285, an increase of about £1,000 compared with the previous twelve months, when, however, the fine gain of £40,844 was shown. Add £10,974 brought forward and the total available is £198,259 from which directors' fees and interim dividends on preference and preferred ordinary shares have been met, leaving £141,214. Final dividends now declared bring the ordinary dividend up to 20 per cent. and the preference dividend to 5 per cent., and the statutory contribution of £10,000 is made to reserve. It is further proposed to pay 20 per cent dividend and 33⅓ per cent bonus or 53⅓ per cent. in all on the deferred shares, and, while the directors make a show of adding another trifling sum, £1,753, to reserve, practically all the money comes from the balance brought in, leaving only £8,598 to be carried out. Reserve funds now amount to £90,000, not a bad looking sum until we remember that the business is capitalised to the tune of £923,000, and that the goodwill and trade marks stand at £422,900. Still the financial position, take it altogether, is fairly sound. The heavy sum of £207,532 is owed to sundry creditors against the small amount of £24,557 due from debtors,

ture increased £1,757 to £23,166, pumping being the principal factor in the higher costs at £1,603 or £803 up, while repairs costing £5,055 added £501, and interest and commission at £3,431 was an advance of £284, so that the nett revenue of £63,620 was only £2,531 up. But the sum of £7,824 brought in from 1906 was larger by £4,547, giving a total of £71,445 or £7,078 more to divide. After providing for the 4 per cent. preference stock the interim dividend paid at rate of 5 per cent., and that now declared at rate of 6½ per cent., make up the usual 5¾ for the year, and leave £14,429 to go forward. Expenditure on capital account amounted to £12,919, all but £100 being on construction of mains, &c., pipes being laid to the village of Sherburn, and 1,736 additional houses being supplied. The debit balance of capital account has risen consequently to £21,398. Debts due to the company are £338 higher at £9,019, while the company's debts have risen by £2,532 to £11,658, but cash is £5,987 better at £22,003. General stores, tools, &c., are valued at £3,778. Sir Theodore Fry, Bart., who has been a director since the formation of the company in 1866 no longer resides in the North of England, and has resigned his seat on the board in consequence, and Mr. J. P. Fry has been elected to fill the vacancy thus caused.

HARRISON, BARBER, AND CO., LIMITED.

This is the well-known horse slaughtering business, and in the year to December 31 the sales, together with stocks on hand, represented a sum of £70,207. Ordinary working outgoings were £45,542, expenses of management took £6,383, repairs and renewals £2,784, and sundry other items £1,126, leaving the actual nett profit at £14,383. This takes into account a few pounds for transfer fees, &c. With the sum of £2,795 brought forward the disposable credit is £17,178. Dividend for the year will be 6 per cent., £2,000 goes to reserve for depreciation, and £5,000 is credited to a fund for the rebuilding of the York Road and Greenwich depôts, leaving £2,377 to be carried forward. The proposal to rebuild the York Road depôt is in accordance with the requirements of the L.C.C., but unavoidable delay has occurred with the result that the building operations have been postponed for a year. The company does not possess a general reserve, but that for the depreciation of leases, &c., now reaches a sum of £18,268, and the purchase of business, freehold and leasehold premises, and plant, amount to £150,901. In other respects the accounts call for no comment.

BROWNE AND EAGLE, LIMITED.

This wool warehousing business managed to do a little better in the year to December 31 last than in the previous period, but the profits are still lamentably inadequate. The quantity of wool catalogued in London was 859,800 bales as compared with 775,800 in 1906, and the number lotted to this company's warehouses was therefore 208,000, an increase of 37,200. Balance of nett profit is returned at £9,708, an increase of £3,261, and there was a sum of £2,526 from the preceding year, making an available credit of £12,235. A year's interest on debenture stock absorbs £6,000, and the directors propose the preference dividend for the six months to December 31, 1903, leaving four years in arrear, carrying forward £3,110. Prospects for the current year seem a little more hopeful, and for the season 1906-7 the increase in the production of Australian wool was 220,500 bales, of which 183,000 were sold in the colonial markets. This season's sales in the colonies being still in progress final figures are not available, but it is expected that a considerably increased quantity will be shipped for disposal in London. The balance-sheet makes one shudder, and, as we have said before, there must be reorganisation sooner or later. It is quite obvious that the present capitalisation has no sort of justification. Freehold, leasehold properties and goodwill have stood at £377,016 for years past, and the reserve is £435.

MERCHANTS' MARINE INSURANCE CO., LIMITED.

The underwriting account for 1906 showed a nett premium income of £188,216, while interest and transfer fees yielded £11,797, making a total of £200,013. Claims paid in 1906 and 1907, including £2,494 on 1905 account, took £163,980, expenses amounted to £16,071, and £211 was written off for loss on investments realised, leaving £19,751 to meet any further claims that may arise. In 1907 the nett premiums were £204,900, covering £41,347,548, of which it is estimated that 80 per cent. has run off. Claims paid amounted to £50,538, and after adding in the balance brought forward and £12,399 from interest, &c., and deducting expenses, the surplus, subject to result of risks still to run off, was £143,834, out of which the usual dividend of 6 per cent. is paid.

SEA INSURANCE CO., LIMITED.

After providing for losses and all other outgoings, and transferring £37,000 or £10,000 more than in the previous year to suspense account, the underwriting account for 1906 showed a profit of £8,062, to which was added £31,163 for interest received, making a total of £39,225 compared with £28,067. With £100,275 brought forward and £32,672 from interest and transfer fees the balance to credit of profit and loss on December 31 last, after providing for all charges and for the interim dividend, was £124,207 or £20,978 less. Of this £12,500 is written off investments against £30,000 put to reserve a year ago, and a final dividend, making 30 per cent. or the same as last time is paid, leaving £3,478 less at £96,797 to be carried forward. Loans, investments, and leasehold properties are £34,132 down at £868,728, but the company has cash and bills amounting to £74,346, and sundry debtors owe £53,791. On the other hand, £18,102 is due to sundry creditors, underwriting suspense account stands at £81,723, and the balance on the 1907 account is £200,531.

THAMES AND MERSEY MARINE INSURANCE CO., LIMITED.

This company's experience in 1906 was again a very unfortunate one. Its underwriting account for that year showed a balance of £262,207 on January 1, 1907, but claims, returns, &c., absorbed £235,807, and after transferring £74,000 or £5,500 more to suspense account the loss was £47,600 against a loss of £14,295 for the preceding twelve months. Interest on investments and transfer fees produced £1,649 less at £41,160, and with the balance brought forward the nett surplus, after paying income-tax and providing £116 for loss on sale of investments, amounted to £114,920. This was a decrease of £68,767 compared with a year ago, but the directors again pay a final dividend of 4s. per share, making the usual 8s. per share for the year. In the balance-sheet the internal reinsurance account has been reduced by £9,699 to £67,606, but the suspense account is £15,700 up at £114,920. Investments are £129,450 lower at £1,110,502, a decrease which seems to be partly due to the appropriation of the investment fluctuation account of £47,355, and even this figure is £13,754 above the market value on December 31. Premiums received during 1907 totalled £433,343 of which claims took £154,976, and after meeting all other outgoings £232,697 was carried forward.

COMPANY MEETINGS.

WELFORD AND SONS.

The twenty-second annual ordinary general meeting of Welford and Sons, Limited, was held on Monday at Cannon Street Hotel, E.C., Mr. John Welford (chairman and managing director) presiding.

The Secretary (Mr. H. Trotman) having read the notice convening the meeting,

The Chairman said: It is gratifying to be able to present such a substantial report at this our twenty-second annual general meeting. I am pleased to say that our trade continues to increase, which shows that our supplies are well known and appreciated by the public. Much has been written of late about the London milk service, and the ruling powers intimate early legislation, but it may be taken for granted that the proposed measures will more particularly affect the careless producer, the irresponsible itinerant vendor and the chandler's shops, not the well managed dairies. (Hear, hear.) Undoubtedly our regulations and scientific control are well in advance of any general rule or orders that may be brought forward, the effect of which can only strengthen our hands in the voluntary control which we have for a long time past and at very great expense carried out by our medical and veterinary staff, assisted by our analytical and bacteriological department. In the first place, our supplies are taken from approved farms only in the best grazing districts of England. Before any milk is received from a farm, the premises are submitted to medical and sanitary inspection. The producer is bound to keep and maintain a pure water supply, for the needful washing and cleansing of utensils, and all the sanitary arrangements to the satisfaction of our medical and sanitary officers, who inspect and report from time to time. The cows are inspected and reported upon by our veterinary inspectors, and milk from healthy cows only accepted under cleanly conditions of milking, every endeavour being made to ensure a supply of high quality, combined with healthy purity. Samples are taken daily and carefully analysed in the company's laboratory, and by these means we ensure to our customers a pure, wholesome, and rich milk supply. The fact is we must see that the milk is good and clean at its source. I cannot let this opportunity pass without again thanking many shareholders for their kind assistance and recommendations and I will urge them to continue to do all in their power to bring the company's supplies before their friends.

Mr. G. F. Roumieu, J.P., seconded the motion, which was carried unanimously.

London and Westminster Bank.—Liabilities on Feb. 1, consisted of current accounts and deposits £26,457,370, acceptances and endorsements £1,339,387, and other liabilities, £1,370,569 against which there were cash in hand and at Bank of England £4,015,999, money at call and short notice £4,204,930, Imperial Government securities £3,885,000, bills discounted, loans, &c., £18,490,290, and other securities £1,431,721.

London City and Midland Bank.—The statement for period to January 23 showed current, deposit and other accounts of £52,212,635, and acceptances on account of customers £3,620,232 against assets consisting of cash in hand and at Bank of England £9,683,161, money at call and short notice £6,157,467, investments £6,628,735, bills of exchange £6,753,255, and advances on current accoun ts, &c., £28,350,095.

Capital and Counties Bank.—Liabilities on January 28 consisted of £33,859,535 on simple contracts and £458,042 on bills, and assets of £5,412,029 cash in hand and at Bank of England, £5,164,823 money at call and short notice, £4,835,589 Consols and other investments, and £19,911,792 bills of exchange, promissory notes and advances to customers.

London and South-Western Bank.—The statement for January 31 shows current accounts and deposits of £14,424,185, other liabilities £453,703, and acceptances and endorsements £49,609, against assets consisting of cash in hand and at Bank of England £2,173,289, money at call and short notice £1,268,250, British Government and other securities £4,043,892, and bills discounted, loans, &c., £9,392,457.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 528. New Series. SATURDAY, FEBRUARY 15, 1908. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.**, postage **4d.** extra. Bound Volumes **15s. 6d.**, or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Divided Councils in the Stock Exchange.

A step backward or sideward was taken by the Committee of the Stock Exchange on Tuesday afternoon, and Rule 75 has been reinstated pending further discussion. The opposition was so clamorous to the step taken with such apparent suddenness by the Committee last week that no other course seemed open to it. The whole subject will come up again in a fortnight's time, but such is the state of feeling aroused over the point in dispute that we very much doubt whether a final settlement will then be attained. How the dispute is to be permanently settled in the present state of the market is more than we can say. Strong, or strong looking, arguments are adducible on both sides. Those who defend the separation of the jobber from the broker maintain that the jobber's existence facilitates the transaction of business which would otherwise become difficult, if not impossible, by reason of the unexampled variety of securities quoted in the market. The jobber, they insist, is a necessary go-between who stands in the market to "make prices" in securities, so that brokers may carry out the transactions committed to their charge with the least possible delay and difficulty. To substitute auctions or "calls over" of groups of securities for the jobber in a market so large would, they contend, be impossible. There is no room in the building to allow separate assemblages to take place, and the whole business day would not be sufficient to allow the entire list to be called over once. In this respect there is undoubtedly little or no comparison between the London Stock Exchange and provincial or foreign stock exchanges, because the London one is by far the largest in the world.

Against this view we must first of all put the fact that, notwithstanding the existence of Rule 75 these many years back, the business of jobber and broker has all along been mixed up, and there have been throughout the whole period firms upon the Stock Exchange either privileged to combine the two occupations or strong enough to set the rule at defiance. A case of the kind occurred about a fortnight before the Committee suddenly decided to wipe out the restrictive rule, and cases are always occurring, so that the rule is a dead letter just when its enforcement is most needed. To this fact we must further add the influence of modern facilities of intercommunication. The existence of the telephone alone has made it not merely possible but easy for country brokers to enter into direct and intimate relations with jobbers on the Stock Exchange and to pass by the London broker as intermediary. Through this new instrument alone a state of affairs has been brought into being most hurtful to the broker members of the "House." In former years most, if not all, the leading firms of brokers had country brokers for clients and country banks also, for whom they acted as agents in lending money or in buying and selling securities. For years, however, this business has been undermined and gradually destroyed, not only in relation to what is called "shunting" or the dealing between country markets and the London market in order to snatch a profit from any difference in the prices between the two, but because it has contributed to draw away the regular investment business of banks from the brokers and place it more and more

in the hands of the jobbers without intermediary of any sort. Inasmuch as our joint-stock banks, taken as a body, conduct through their branches an increasing volume of the investment business of the country, it is easy to comprehend that the brokers who are members of the Stock Exchange should feel aggrieved and complain of injury in these ways done to them. They are mulcted in their heavy annual subscriptions, from which they often seem now to get no benefit whatever beyond the right to enter the market and transact affairs there. They see business which was formerly theirs, and should be theirs to-day if Rule 75 has any meaning, carried on wholly without their intervention. That cannot be right, and we are not surprised that the brokers kick against the inability of the Committee to give them any redress. Many among them clamour just as strenuously for the maintenance of Rule 75 as the weaker, at least, among the jobbers, though for different reasons.

These are domestic points, it may be said, affecting the relationship of member with member, and in no way concerning the outside public. Of that we are not so sure; but passing the question by for the present, let us now look at the attitude of the outside public towards the market. An illustration of that attitude will be opportunely found in a letter printed amongst our "Economic Notes" this week. By dint of much circularising and newspaper advertising the outside broker has driven into the minds of the speculative public, and also to some extent the investing public, the idea that the jobber is, in plain language, a robber. His function according to this view is to "scalp" so much off the price of any security dealt in, to his own profit, and to the injury of both buyer and seller. Whether jobbers as a body give any cause for this view to exist is not now the question, but that it prevails, and that it does incalculable injury to the Stock Exchange as a whole in public estimation cannot be questioned. The very facts that everybody now wants to deal at "the middle price," and that brokers are continually harassed by complaints from their clients, well or ill-founded, because of the jobber's "turn," should serve to warn the Stock Exchange Committee that some drastic change will have to be made. Our own view has always been that, however useful the jobber may be in active markets, he is a superfluity in slow or dormant markets, and ought there to be done away with. Indeed, we incline to the view of the late Mr. Lionel Louis Cohen expounded by him to the Royal Commission on the Stock Exchange which took so much evidence, often very little to the purpose, in 1877-8, that there should be a distinction between jobber and dealer. As he defined it, the mere jobber is the man who stands in the market and buys and sells always with a view to closing the day with his book "even"; that is to say, he never, if he can possibly avoid it, takes up any stock that he may have bought or goes home minus, or a "bear" of, any security he has sold. Each sale he endeavours to balance at once by a purchase, and each purchase by a sale. In very active markets this individual may be a person of some utility, but where it is a question of debentures always more or less difficult to dispose of, or bank shares or dock securities, or of the hundreds and thousands of small items in which there is no lively market, he is often of little practical utility, and might be done away with. In quiet times he has no more facilities for fixing a price than we have. All he can do is to bustle around and try to find out what he should quote.

The dealer is another person altogether, being a wholesale merchant in securities, as Mr. Lionel Cohen very lucidly distinguished for the benefit of Lord Penzance and his colleagues. The dealer is not afraid to "lay in a line" of some particular stock, nor is he afraid to sell beyond the amount of the stock he may have in hand, if he judges that he can cover his sale at a profit by waiting a day or two, or it may be weeks. Dealers of this description there will always be, whether the mere book and pencil jobber is done away with or not.

The worst of it all is that the hesitating, would-and-dare-not action of the Committee is tending to prejudice the whole question and to still further hurt the market with the public. When they had abolished Rule 75, no matter how impulsively, we think they should have stuck to their decision and allowed the members to fight the question out amongst themselves against the election of the new Committee now not far off. By putting the rule back in its place the Committee has stultified itself, and has at the same time done nothing whatever to reassure the threatened jobbers. As many of these poor fellows have not been making a living for years back it is probable enough that wobbling of the kind displayed by the Committee will hasten their departure, and we shall not be at all surprised if a large number of tired out and exhausted members disappears altogether next month. However much one may pity the men thus submerged, there is no use disguising the fact that the market is, and has long been, overmanned. The tendency of modern Stock Exchange business, as of all business, is towards concentration. It is gathered into fewer hands, and runs through certain defined channels widened and deepened by use. More and more also the barter of securities goes on entirely outside the Stock Exchange. It is so easy to deal direct with a wholesale house outside, and the temptation of the double commission which direct trading of this kind affords has contributed much to the decay of business inside the market. No enactment abolishing the distinction between jobber and broker can remedy this, and the decay of market business may be said to date from the wild gamble in South African shares in the last decade of the nineteenth century. It is the Kaffir houses that have made outside dealing so much the fashion, and even if these houses were submerged in the course of the long-drawn-out reaction, the habit once indulged in is not likely to be given up, for it existed long before a Kaffir share was ever heard of. Witness Mr. Frederick Banbury's exposition of the legitimacy and beneficial character of the habit to the Royal Commissioners. Were all the South African houses to disappear their place would be taken by other houses, and we should not be at all surprised to see a gradual segregation of members of the Stock Exchange into those who do much of their business outside the "House" and those who cling to old habits and remain there wondering how it is that the trade they do is always so poor. Can the consequences of an evolution of that kind be averted by any step open to the market to take? We think, perhaps, they might be, but the subject opened up by this question is so intricate, and would lead us so far, that its discussion must be reserved for a future day.

Exit the "All-Red"—Enter the "Hudson's Bay" Route.

Ottawa.

To all appearances the All-Red route project is, though not yet buried, dead. Lord Strathcona still maintains that it would be "a most admirable means of knitting more closely the bonds of Empire"; but, unfortunately for his reputation in Canada, he said the same for the All-Red Pacific cable, which, built by England and the principal colonies, competes against private enterprise and costs us $100,000 a year as our five-eighteenths share of capital charges and working deficits, yet has not added a dollar to the value of our meagre trade with Australia, nor prevented the Australians from augmenting their tariff on our exports, in some instances to the verge of prohibition. The steamship scheme has been whittled down considerably since it was first launched, being now of a Canadian rather than of an Imperial character; yet, even so, Sir Wilfrid Laurier has quite lost interest in it.

In its original form the project was neither more nor less than a demand on the part of Canada, Australia, and New Zealand that, in consideration of contributions from them, the British taxpayer should give something like a million sterling per annum towards the mainten-

ance of a fleet of *Lusitanias* and *Mauretanias* between Liverpool and Quebec, and of a similar fleet between British Columbia and Australasian ports, 25-knot vessels being specifically named by the later promoters, in order to overcome, or at any rate keep in check, the separatist tendencies of the Protective tariffs which those Colonies have levied against England and against each other.

At the beginning, the creation of a third fleet of *Lusitanias*, to sail between Vancouver in British Columbia and Hong Kong and Japan ports, was suggested; but that glowing idea was soon abandoned. The estimated first outlay on the two fleets remaining was given by experts as $50,000,000; that is, there were to be four *Lusitanias* on the Atlantic and four or more on the Pacific, each costing about a million and a quarter sterling. The cost of upkeep was not gone into in detail, though an Australian authority pointed out that a steamer running from 24 to 25 knots an hour between Sydney and Vancouver would consume nearly 20,000 tons of coal on each trip, or 40,000 for the round voyage.

Apparently, neither Mr. Seddon, who was the father of this grandiose enterprise, nor the English Imperialists who took it up were aware that an All-Red route had long been in operation upon these portions of the earth's surface. The Canadian Pacific and Allan steamships sail weekly from Liverpool to Quebec in summer and to Halifax and St. John in winter, from which ports the Canadian Pacific Railway conveys the passenger across Canada to Vancouver, where he takes steamers owned by a New Zealand company for Australia, or goes by Canadian Pacific steamers to the Orient. New lines with 25-knot ships would not, therefore, have made matters any the more All-Red; they would merely have set up State competition against the existing private lines that are quite competent to handle all the traffic offering.

Not a pound of freight has ever gone from England to Australia or *vice versâ* across Canada, the long rail haul, with the two transhipments, putting the Canadian route out of court; and, for the same reason, none would go if the ships on the Atlantic and Pacific were capable of steaming twice 25 knots. A few passengers travel during our summer between England and Australia by our route, but the great majority prefer to sail direct from England or the Continent by the all-sea lines.

The scheme had therefore nothing to recommend it from a British commercial aspect. On the contrary, it was a plan to divert traffic from natural to artificial channels by means of subsidies, of which the major portion was to be paid by Englishmen. We in Canada favoured it, not because we are Imperialists, for almost to a man we are for larger Colonial control of Colonial affairs, but simply because it promised to leave money in the country, particularly if one or both fleets were to be operated under the direction of such Canadian politicians as Mr. Clifford Sifton. Sir Wilfrid adopted it solely for this reason. It would have been a serviceable election plank.

The Australians soon perceived, however, that we, not they, were to be the principal beneficiaries, and forthwith began to back out. A Melbourne paper showed, what indeed was obvious, that as the steamships on the Pacific could not obtain freight between England and Australia, they would have to depend on freight between Canada and Australia, though, with so much of their space occupied by engines, boilers and coal bunkers they would be freight carriers only in name. Our whole trade with Australia and New Zealand amounts to but $3,000,000 a year, and, clearly, if we in Canada were to give a subsidy of $500,000 a year, England $1,000,000, and Australia and New Zealand $1,500,000 to this Pacific fleet alone, the transaction would rank among the wildest follies of the bonusing system.

Then came the new Australian tariff, which, like our own, hits British goods hard while pretending to give them a preference, and also bears heavily on Canadian exports, implements, bicycles, and the like. To make matters worse, the New Zealand company, which owns steamers running from Vancouver, refused to work any longer under the terms of its old contract, which had expired; this has led the Canadian Government to withhold its annual subsidy of $185,000 till the matter is adjusted.

Apart from these considerations, the question as to how the movement of traffic between the Eastern, Western, and Southern hemispheres might be affected by the construction of the Panama Canal could not be overlooked. What was the use of building an expensive fleet on the Pacific, to carry next to nothing, if the little it did carry was to be taken from it by a more economical route?

With the Australian section of the programme in this state of suspended animation, the proposal was reduced to the modest dimensions of a joint subsidy of $2,500,000 or thereabouts, payable by England and Canada, for the establishment of a faster line between the two countries than now exists. A 25-knot service was given up; the present Canadian Pacific *Empresses* sail 18 knots, and it was suggested that the new vessels on the North Atlantic should make 20 or 21. Sir Wilfrid pressed the argument that England has never yet given a subsidy—that is, a sum over and above the actual ocean postage—to Canadian steamships; whereas she began subsidising the Cunard line at its inception in 1840, being then afraid of American competition, and now, in dread of German, has furnished that company with a loan for construction, besides paying it well for carrying the mails and giving it an Admiralty retainer. He added that in thus helping the Cunards, the Imperial Government was obviously enabling the port of New York to divert traffic from the St. Lawrence.

On the other hand, if the Imperial authorities are to begin bonusing Canadian steamships in the Protectionist sense, for this is what is meant, where are they to stop? How can they refuse to bonus Australian, South African, and, above all, British lines? Behind this lies another pertinent question, namely, what good purpose would be served by creating a new Canadian line largely out of State grants to compete with the Canadian Pacific and Allan vessels, when, considering the enormous advantage possessed by the Canadian Pacific fleet in having 12,000 miles of railway to feed it with passengers and package freight from all parts of Canada as well as from the Western and Northern and North-Western States, it would to a certainty come to grief?

It is said in reply that our second transcontinental road, the Grand Trunk Pacific would, when completed, feed the new ships. How could it? The Grand Trunk Pacific is not likely in our day to enter the Western States, where the bulk of the package freight of Canadian steamships originates; and, when it does, is sure to carry it, in winter at least, not to Halifax, but to the winter headquarters of the Grand Trunk proper at Portland, in the State of Maine.

Sir Thomas Shaughnessy, president of the Canadian Pacific, brought the subject to the level of commonsense by saying in substance that sentiment and make-believe had better be banished from the consideration of this and every other enterprise that in the long run must stand or fall according to its commercial soundness or unsoundness. His steamships would be kept on the Atlantic whether the proposed new ones were built or not, and would be increased in size and speed whenever the requirements of traffic demanded it.

Under such circumstances, why should the Canadian and British taxpayers be asked to bonus a competitive line in the name of the Empire, when in reality it would simply be for the benefit of the Canadian promoters? This was the question Sir Wilfrid and the rest of us were pondering when the industrial depression arrived the other day and obliged us to shelve the business till a more propitious time.

The lesson which the English investor may learn from this brief record is that the larger Colonies, which neither contribute to the Army or Navy, nor give England any foothold worth speaking of in their protected markets, and, what is more, can never, as would appear, be induced to do so, are nevertheless always on the

alert to make an honest penny out of him through appealing to his Imperialism. His Imperialist sentiment is, in fact, the chief point of attack of every discredited Canadian promoter who crosses the ocean in search of British capital. The promoter himself often becomes a fervent Imperialist for the occasion, and, on returning, laughs consumedly over the gullibility of those who took his pinchbeck for the genuine metal.

The next Canadian project of importance to be taken to England is the Hudson's Bay Railway and Steamship Route. Briefly, it involves the building, through a barren waste, of 500 miles of railway from a point in the Province of Saskatchewan to Fort Churchill on Hudson's Bay, and of a fleet of steamships specially equipped for traversing those Arctic seas amid fog and icefields during the brief season of navigation. The Manitoba wheat crop of this year will be stored at Churchill till Hudson's Strait is clear in the June or July of next year; and will then be subject to the excessive insurance rates called for in those dangerous waters.

This work, with the outlay on harbours, lighthouses, and what not, is estimated to cost $50,000,000. Every ton of merchandise it might bring in, every bushel of wheat it might carry out, would be so much lost to the Grand Trunk Pacific and Canadian Northern, and, in a lesser measure, to the Canadian Pacific. Yet it is not only universally favoured in the Canadian North-West, but, such are the exigencies of party politics, endorsed by Sir Wilfrid Laurier.

The latest word from the advance agents who are going to England in the spring, is that while the route would not materially reduce the distance to Liverpool, it would constitute "another glorious link in the chain of Empire," whatever that may mean. The truth is these buoyant fellows would undertake to tunnel the Atlantic in behalf of the Empire, provided Englishmen furnished the money and were Imperialistic enough to dispense with an audit.

German Views on Banks and Banking.

(By the London Correspondent of the *Frankfurter Zeitung*.)

II.

As stated last week, it seems hardly worth while for clearing banks to tap new sources of revenue by establishing foreign exchange departments, because it is only by undertaking the financing of trade and industry and over-sea transactions and incurring the legitimate risks involved thereby that this class of business can be made sufficiently profitable. The question then arises: Would this be compatible with their functions and their other liabilities? Will it not interfere with their ability to readily meet their liabilities at all times? Some of the banks have already accepted bills to the extent of about £25,000,000 all told. Most of these must be finance drafts, as the financing of trade has thus far not been done to any extent by the clearing banks. Finance bills are looked upon by the central institutions with some distrust, as in most cases they assist in fostering unhealthy speculation and conceal the true position of the balance of trade between two countries, and also further the outflow of gold at inconvenient times. Of course, the acceptors of such drafts run very little risk, as they have ample cover, though indirect disadvantage must necessarily result from eventual complications or crises which might be the outcome of over-trading or over-speculation. Whether the granting of credits to trade and industry falls within the scope of deposit banks, and whether they may assume the liabilities involved thereby without impairing their own recognised functions, is a question open to dispute; in any case, sufficient experience is still wanting to form a well-founded opinion. The position of the English clearing banks is, upon the whole, a strong one. However, it has been held for some time by sound economists and men of business that it is absolutely necessary for them to keep their own gold reserves, and not to rely altogether on the Bank of England. This would be the more imperative if the deposit banks, as a result of more active relations with trade and industry, were to incur increased liabilities. The profits derived from the new branch of business would in this way be, perhaps, more than swallowed up by loss of interest through the maintenance of an increased reserve. Furthermore, it is not at all impossible that in troublous times depositors might become alarmed, on account of the increased liabilities, to such an extent as to withdraw their deposits, and cause a run on the bank.

After all, the deposit banks are looked upon as the custodians of the people's ready funds, and they must at all times be prepared to repay these funds in specie. Therefore, if in consequence of their activity in other directions, which might affect their liquidity, they create only the slightest impression of allowing their assets to become in a less degree realisable—in other words, if the implicit confidence held by the public in their absolute safety and soundness is allowed to suffer—the inevitable result will be to cause a withdrawal of deposits, which would, in the first instance, flow into the Bank of England or to such institutions as have adhered to the old principles, and probably a further concentration of deposits into the hands of a smaller number of banks would take place.

It seems, therefore, doubtful whether the attempts which are being made by some clearing banks will lead to a general extension of the sphere of activity of the clearing banks in the direction indicated; the more so as they are not properly equipped for it, and have not sufficient experience. This class of business is transacted by some twenty merchant bankers, a few London banking institutions, a number of colonial and transatlantic banks, and last, but not least, by the London offices of Continental banks. It is estimated, on good authority, that the total acceptance liabilities of these credit institutions in times of activity amount to about £175,000,000 to £200,000,000, distributed as follows:—

	£
London Clearing Banks, about	25,000,000
London Banking Institutions, about	11,000,000
Provincial Banks with London offices, about	18,000,000
Merchant Bankers, about	80,000,000
Transatlantic Banks, about	20,000,000
Continental Banks, about	18,000,000
Various Credit Institutions, &c., about..	28,000,000

The lion's share falls to the merchant bankers, some of whom are engaged for very important amounts, so that in difficult times their acceptances have been subjected to criticism, and have even been refused. No doubt restriction in that way is justifiable, but it should not only be applied in difficult times, but also in normal periods, in order to keep firms within their limits. It might be worth while considering in what way some control could be exercised for the circulation of acceptances; something on the same system introduced in New York by the banks, who notify each other as to the amount of promissory notes in circulation by commercial firms. The question as to what extent banking houses and institutions are justified in entering into acceptance engagements cannot be settled by hard and fast rules; still, a reasonable proportion must be observed between the capital of the acceptors and their acceptance liabilities.

In valuing acceptances many factors must be taken into consideration. In the first place, the means and resources of the acceptor, and, furthermore, his principles, morality, intelligence, and business capacities; then, of course, his outstanding liabilities, and also the position of the drawer, &c. The acceptances of a firm with a capital of £100,000 may, under certain circumstances, be considered better and preferable to those of another firm with a capital ten times as large, which, however, is engaged in speculative enterprises. It is a well-known fact that several private firms in London have acceptance engagements to the extent of four or five times their own means. Nevertheless, the acceptances of most of the private firms have, so far, been more readily taken than the acceptances of certain banks, especially those of the foreign agencies. It will be recollected that the Frankfort house of Rothschild

also showed a certain prejudice against acceptances of banks, but at that period banks were not so firmly rooted and strong. Their capital was much smaller; their importance for the economic organisation compared to the present was insignificant. The management and administration were also not in such responsible and competent hands as they appear to be at present; therefore the obsolete views have no more basis. Moreover, the banks have the great advantage of publicity. Their position and business results, in all their bearings, are public property, and are subject to public criticism. Private firms are conducted independently and uncontrolled. For this reason the question suggests itself whether private firms, with large amounts of acceptances outstanding, should not likewise, in their own and the general interest, agree to publish their balance-sheets.

Economic and Financial Notes.

State Ownership of Railways.

An interesting debate arose in the House of Commons on Wednesday upon this question, which may become a burning one, and we are sorry that the loquacity of Sir Frederick Banbury prevented a vote on the motion of Mr. George Hardy as amended at the suggestion of the President of the Board of Trade. As Mr. Lloyd George observed, it is some forty years since any public inquiry took place into the working of our railway system, so it is quite time we had another. But the day has gone by for the transfer of our railway system holus-bolus to the State. That would be a ruinous business, in our opinion, because of the enormous price that would be asked, a price made up partly through the extravagant expenditure of capital in the past, partly through market quotations. As Mr. Lloyd George pointed out, there is no analogy between the State ownership of railways in Germany, Belgium, or Russia and what our own ownership would mean if we bought at this late day. If we had been going to acquire the railways for the State it ought to have been done in 1844, or at any rate within ten years of that date. Now the railways must be left to work out their own salvation. But there is no reason why their controllers should not be assisted by a public examination of their past management and its results. The preference given to foreign traders in the matter of rates is a real and long-standing grievance; so is the maladroit administration of much of the railway business, for, with all respect to Mr. Bonar Law, the great body of our railway directors is not composed of business men. Many members of boards inherit their position, and for most of the remainder it is a matter of influence, favour and family connection. No wonder the House greeted Mr. Bonar Law's "business" intervention with a burst of laughter, for it is just because railway boards have not been composed of business men and because railway managers for the most part are men of narrow views, who have risen step by step from small beginnings to their high positions, that there has all through their history been a slipshod, haphazard fashion of dealing with traffic and with the capital account which, as we have insisted year after year for longer than we care to think, is tending to reduce the railways to a state of unprofitableness unexampled in the history of this branch of modern scientific development in any other part of the world. The railway companies are beginning to feel that their sins and mistakes will have to be paid for, and, as Mr. Lloyd George said, their managers have already been laying their heads together to discover whether it might not be possible to combine with a view to self-protection against the consequences of their past mismanagement. All of them are now preaching economy, restriction of competition, dovetailing of interests, &c. Let us have the whole subject thrashed out in the open before a competent committee of business men, in order to see what legislative steps might be feasible for the protection of the nation at large with its industries against this threatened monopoly combine.

A Growl at the Stock Exchange, and a Suggestion.
